I am the first to agree that many lack common sense these days, but what
happened to all those complaints we used to get from newsgroups that
your posting was 'inappropriate' to the newsgroup in question!
Let's suppose we broadcast this thread in say uk.misc or talk.bizarre,
or maybe even soc.culture.israel then they would soon let us know about
it!

Hi

just bought a kenwood 751a & need a manual. Can someone suggest a place to purchase one, or will gladly pay to have one reproduced.

My new web page will allow you to have your new calls e-mailed to you when
they are assigned!  If you have a friend who is studying for the exam, you
can be automatically notified when their calls are issued.

Please visit http://davisfamily.nu/hamcalls

This is free and is provided simply as a service to the Amateur Radio
community.

That is a silly question since the answer itself is common sense. If people
were logical then who would have babies? Betamax video recorders would
still be in use in Europe and Jesus may not have been nailed to a tree! If
there is a God then perhaps she is sitting up there having a damn good
laugh at us all - I am.

Finally something good comes from the endless Morse debate!

... resonance, Kirchoff, reactance, transconductance, Thevenin, bipolar ...
stay tuned while I get out the electronics dictionary...

Mike

Don't foget Spark Gap.  For those of you who do not know what DX is; it
means receiveing a radio/television signal from far away.  From far away
as in you usually do not get a signal from this place.  DX can also mean
how far your siganl is getting out.  From everything that I read; if you
can run just 10 watts, and your siganl is getting out 300 to 400 miles
```

then that is better DX then somebody running 1000 watts and doing th
same thing.

Dr OM/YL

This mail to inform You that I resently have uploaded an updated beacon list at my website covering a 70 MHz world wide, a 50 MHz world wide in six continantal splitted listings covering, Africa, Asia, Europe, North America, Ocean/Pacific and South America.

These lists can either be viewed in html or downloaded as a ZIP file in band pacages, the ZIPed version contains a bandplan aswell.

These can be found at http://www.qsl.net/oz6om/

I hope You find the listings of use ...

vy 73 de OZ6OM "Matt"

First of all I have a commercial pilot's license with airplane single and multiengine land and instrument ratings. I have been flying since 1967. I own and fly a Baron. No I didn't have to learn Morse to identify navigation aids, the CW is printed right on the chart or approach plate. The statement "don't know of anything used in flying their planes that would need to recieve (sic) morse code for any reason" is fascinating. What

do your friends fly? Ultralights? What are their license numbers? Mine is 1774847.
My
Baron's call sign is N502TB. When you tune in an NDB, a VOR, or an ILS you are
taught to
listen to the CW identification to confirm that you have the correct station. This
takes
more time if you have to look at the chart or approach plate to see what the CW is
rather
than just hear the ID.

Apparently not any more. Neither of my friends ever HEARD of this BS
and they both have licenses and fly planes. Perhaps back in the 60's

```
things were different.

If anything, the HF part of the HAM band is like CB, but nothing in the
no-code bands of Ham radio are even CLOSE to CB.   Nothing in the no
code bands are shortwave, the lowest is 50Mhz VHF.

You are thinking of perhaps 10 meters, in which you must pass code test.

Seems kind of silly doesn't it, that you need to know code to use 10
meters, but you don't for 11 meters.

Right now. Right here. You don't know anyone in aviation. I flew my last IFR cross
country
Thursday. Damn if the Centex VOR didn't go _. _.   ._ _   _._ "CWK". Then the
Waco VOR went
._   _._. _ "ACT". Then the Waco ILS went .. ._ _._. "IACT". The Navaids that
don't do it
(CW ID) are LORAN and GPS. Pack up any sectional aeronautical chart or approach
plate and the
CW is printed next to the Navaid identifier. That's the last for your troll,
wankstain.
H.

Hi,
     I don't intend to take sides in the code vs no code debate but
would like to convey my experiences. Some of my favorite childhood
heroes were ham operators. My favorite one was an old fellow that had

a key strapped to his leg and sent and received morse code while driving. I always had a high regard for the hams. I, like most people had a very busy life raising a family and moonlighting when possible. I am now retired and have a lot of free time. I said for years that "when I retire I will learn the code and get my license". So when I retired I got the code training software and also some audio cassetts. I even sent for the test study books. Just one problem. My short term memory has left me high and dry. I can remember what happened 60 years ago but can't remember what I had for breakfast. I studied and studied and could retain it for a little while, then nothing.

I often listen to short wave and had some of my friends tell me to to look into the 'no code' license. It is a little bit too much like CB to suit my tastes. Sure would be nice if I could talk on the shortwave to other hams, but I can't. Thanks for listening.

Clint Stoner   E-mail address won't work.

  The term 'DX' was originated by amateur radio ops.Others use it to
mean different things.The original meaning of DX is to make contact
with a station in another country.This is required to qualify for any
of the ARRL DX awards that many Hams persue.You can call a dog a cat
if you wish...it dosnt change the fact that its still a dog....:>)

Clint,
You sure CAN be a ham. Go for a Tech Plus license instead, 2 written exams and a 5wpm morse test and you can get on 80 and 40 and 15 meters CW and 10 meter phone and Cw. You an do it. Give it a try, you'll LOVE IT!

Tech license is great in Dallas/Ft. Worth.
There are a bunch of guys who are very good at regulating one another.
Occasionaly we get a nut but he is ran out of town pretty quick.
We are not cliquish, but we do enforce politeness and sticking with the =
law.
The sad thing is, there really is not much activity except between 6pm =
and 10pm.
After that, there are some guys who get together and talk twisted speak =
sometimes
all night on Sunday but that's about it.

> > I often listen to short wave and had some of my friends tell me to
> >to look into the 'no code' license. It is a little bit too much like
> >CB to suit my tastes.

Hi there... I'm an electronic musician seriously looking for electronic musical equipment from the 1960's-80's, in any condition, BROKEN OK:

- SYNTHESIZERS
- KEYBOARDS
- DRUM MACHINES
- VOCODERS
- EFFECTS PROCESSORS
- ANALOG SEQUENCERS
- ANALOG MODULAR SYNTHS (full systems or individual modules)
- MIDI GEAR

Knobs or slider controls preferred but not necessary. The older or more unusual, the better.

Moog, ARP, Roland, Sequential Circuits, Oberheim, Korg, Roland, EML, EMS, Buchla, PPG, Aries, Steiner-Parker, Tonus, Ionic, SMS, Maplin, Yamaha, Simmons, Voyetra, Octave-Plateau, Bode, Polyfusion, Serge, Delta, Emu, Sennheiser, Mutron, Maestro, ElectroHarmonix, Electronic Music Laboratories, Electronic Music Studios, ANYTHING SIMILAR.

Roland TB-303 Computer-Controlled Bassline
Roland TR-909 Rhythm Composer
Roland TR-808 Rhythm Composer
Roland TR-606 Drumatix
Buchla Music Easel
Buchla Electric Music Box
ARP Sequencer
Oberheim Xpander
Memorymoog
Minimoog
ARP 2500
ARP 2600
Korg MS20
Simmons SDS7 / V drum module only
Simmons SDS6 drum sequencer

For a better idea of what I'm looking for, please visit:
http://members.aol.com/rolandman1

Please email me at rolandman1@aol.com if you've got anything you'd consider selling or know someone who might. Please be sure to include price and condition. Thanks in advance and apologies if this message annoys anyone.

>>for these types of filters.
>>
>>Mike
>>

I've tested 1/4, 1/2, 3/4-wave notch filters - what you choose depends on the prupose. Second harmonic filter is 1/2-wave on the undesired frequency

Tried some 2m repeater filter improvement, 600kHz between RX and TX, 3/4 wave configuration with 2.2pF series capacitors. Result 12-15dB notch, but you must use some extra stubs to optimize impedance for minimum loss. 12-15dB is not much, it is low, and result of the small coupling capacitor or 2.2pF.

In an ordinary quarterwave band notch filter you achieve easily 40dB with a single tuned circuit, and possibly 90-100dB with two tuned circuits. It is very wide, the series capacitor is used to build a narrower filter, but has not so much attenuation, the larger capacitor the deeper notch, but also broader. The coax-stub is inductive on the frequency you operate, and it is tuned with a tapped trimming capacitor 1/3-1/5 from the shorted side.

believe the velocity factor for 7/8" heliax(hardline) is 0.82,
cellflex is somewhat higher, possibly 0.9

Quite frequently simple quarterwave filter is a nuissance because it
attennuates every odd harmonic above first resonnance, a 3/4-wave
filter is even worse. This calls for LC-filters. Made a two-section
filter for 2m with 45dB attenuation.
LC notch-filters are particularly important to use for 50MHz, but
because of ch.2 tx in neighbourhood I cannot transmit on 6m

Why do people not delete all this crap before posting a reply?  Why do
people have to use gay signature files?

I have an unblocked R10 scanner with Icom Software, and Optoelectronics
Scout model 40 (with reaction tune cable) for sale. I have had two back
out of deals. Best offer plus shipping takes it

ALSO: Optolinx, complete unit with all cables and software.

Wondering what owners of the Alinco DJ-C1T think of it. Looking for a true
pocket-size radio...Techamerica has it on sale for $100. What's the battery
life??

TIA

Well -- the correct answer is always: "It depends."

One of the regional state highway patrol freqs is at 154.905 mcs.
So, I get to hear a lot of "tweep-tweep-tweep" QRM between
144.200 and 144.205 mcs.
Granted, this is not a "modification" to xmit on amateur freqs.
Oh No, it works that-a-way right out of the box.

The EI9GQ homebrew radio page has moved to www.qsl.net/ei9gq

Recent additions include:
A simple VHF CW transmitter.
2M to 10M receive converter.
6M to 30M receive converter.
30W mosfet PA for the 80M SSB rig.
Pre-programmed PIC now available for the iambic keyer.

Yes it is.All you need is an Amateur Transceiver and some duct tape.Attatch the scanner to the AT with the tape.Leave the scanner switched off and use the AT.

Not very easily. You could modify a VW Bug into a Ferrari, but would you really want to? The very fact that you ask leads me to believe you don't have the technical background to build your own FM transmitter, which is what you'd have to do. (Please don't take offense, I don't have that kind of skill either! My skill level with homebrew electronics falls somewhere between dumb and dangerous. <g>)

The thing to do is go out and get yourself a *real* Amateur HT. Most if not

all of them have receive-only coverage that is the same, or in some cases
better, than a scanner. Plus, you won't have to deal with the expense and
hassle of building your own.

Is it possible to modify my lunchbox to transmit on Commercial
frequencies? :)
ANYTHING is possible. Sure a scanner can be modified to transmit on any
freq. you want, you just have to add a transmitter.

Same goes for my lunchbox! (and a reciever)

All in good fun. People learn more when they are laughing.

How about a useful 50MHz FM transmitter/receiver? You could even enter
it for the PW etc competition!
Cheers,

Jon.

Uh...not to quibble but, "scanners" are...uh...scanning RECIEVERS. I suppose it would be sorta feasable to boost the local oscilator power up somewhat, and sorta use it as a transmitter that way, but I don't know why you'd wanna do that.

Don't wanna sound snippy, but I think I misunderstood your question.

Thanks, people.

CIAO!

Lo there.

I think the HAM Radio bug just bit me, the problem is that i'm finding it a bit dificult to decide what equipment to buy. I have just read the book "All about HAM Radio" by Harry Helms (hey, i have to start somewhere!)

I have got a LOT of questions, so please if you have the time hear me out.

I just moved to Denver, CO. With my parents (yah, i am 17) from South Africa, so we live just next to the mountains in a valley, called Ken Caryl Valley. Dont know if that would be a problem with radio communication.

In his book, he sugested for beginners to buy a Hand Held radio, now i have looked at Kenwood, Yaesu and Icom. In tht book they said that your hand held should be able to recieve the 2m band. Because i am quite interested in satellite communications I suppose I should have to get a dual band radio that supports 2m and 70cm. The problem is, i don't know what kind of output power you need to use satellites for communication. I have seen alot of hand helds that can do 0.5W and then some that can do 5W. I am also gonna be in the Rockey mountains camping out and enjoying all the air :), what i would like to be able to do is to be able to report back home etc. Do you need a 0.5W or 5W for that?

For now, my budget it about $500. The other big reason that got me interested in HAM is the ability to connect your Radio to your PC with a TNC(?) i suppose. I run linux on my PC, and would really like to be able to connect to another PC with my Radio. What equipment do i need to do that, i have read that you need JUST a TNC and then in other placed on the NET i see that you need a TNC and another card you plug in your PC? I would like to be able to use 19200 baud or faster. What equipment do i need?

(hmm, this is getting quite long but thanx for reading to here!)

I have seen a radio, the TH-D7A from Kenwood, it got a built in TNC, does that mean that i can just plug that into my computer without additional hardware? or do i need a PC card in my computer? This APRS, is it JUST a way of seeing where other blokes are with GPS equipment? Is it possible to surf the Internet through your Radio? or just to send Email? Unluckily the TNC is only 9600 baud. Would it be better to buy the TNC seperate? For when i buy a big Transciever the transciever can just plug into the TNC?

Then later(when i have made some money), after i have bought the HandHeld and equipment to link it with the PC, I would like to buy a transciever that can do HF. Any good ones you know of that would not blow a hole in my budget?

Thanks.

Stephan Esterhuizen

Jeff:

It's really not to difficult to accomplish what you desired in your post. The answer is, certainly, yes. You need to pull out of the scanner all the proper LOs (local oscillators), mix them in the proper order (using doublely balanced mixers), and modulate the final result with the type of modulation and information you desire. You're there! You may prefer to apply a little amplification to the result to render the "signal" a bit stronger, but that isn't too difficult, either, in these days of MMICs and hybrids. Trivial!

Dave - W6LEV

Opinions are my own and do not reflect in any way on my email provider (employer).

The battery life is *excellent*. That radio will run for several days
between charges. I got rid of mine because it was too inconvenient to use
the earphone (you do know it doesn't have an internal speaker?). Maybe if I
had a speaker mic for it, it would have been more useful.

Darn nice little radio if you have the extra cash. You can easily forget it
is in your shirt pocket. It would be nice to keep in the glove box so you
always have an HT when you need one.

You should be able to find a used one on eBay for less than $75.

Steve,

For $49.95, you can check out version 9 all you want and you will not have to copy anyone registered disks.

I got version 9 at Dayton and like Tom's earlier versions, Version 9 is works great!

Version 9 is not out as shareware (as I understand it). DXCC, WAS and WAZ are modules of the registered version only. Buy it, you'll like it!

I have Version 8 and have been asking for some of the things in 9 ever since
I got it. I looked at the ad and am singularly unimpressed. It is still a
dos program and still has no variable length or user configurable fields.

My opinion is

For contest use NOTHING beats Troll
For General Logging NOTHING beats Logic 5.

For me, that is what I will stick with.

I have the new version 9. of Log-EQF. Best logging program I have ever used.
To get a complete working version only costs 35.00 and the complete Rig-EQF is
only 20.00. Well worth the really low price. Not fair to steal a man's
creation from him.

Hi Eamon,

Just a suggestion - why not state your website address
IN FULL in your newsgroup messages.

It is then only necessary for the reader to 'mouse click'
on the address rather than spend the next five minutes
changing over to 'Internet search' and having to enter the
full address himself, with the many possibilities of error
and eventually giving up the whole idea as a bad job.

For example, if you click on my full website address below my signature you will be transfered there almost immediately.

Then help yourself to some free technical radio software progams. Been a long time since we had a very early morning chat on 160m.   I must confess I havn't tried just lately.

I fail to see how knowing Morse Code will help you learn how to operate
a radio.  I do not know Morse Code and can operate a C.B. Radio, FRS
Radio, Shortwave Radio, Scanner Radio...

I always thought they were more like little pimple things...cuz they're
'outies' instead of 'innies'.

BTW, isn't it odd that they have Braille on a drive-up teller machine? :)

I hope you will endose my adding tot hese sentiments, the idea
of not only bring ing people in but treating them so they want to
stay. I think the number of new is just barely enough ifwe got them to
stay, but more would nice

Jack,

Brass pounders will always be around, and in large numbers too. As for new blood
in
Amateur Radio, there is plenty of that too. Where did the notion that Amateur
Radio
is dying come from? At my extra class exam (recent) there were about 5 youngsters
aged about 10 taking the 5 WPM code test. Come to think of it, there were kids
testing at every one of the test sessions I attended.

I think we need to worry more about the F layer falling.

73,

Marv
AB0IO

Chicken Little is an old tale. No one learns. Seems folks are always the same.
Thank you for an independent observation.
I suspect the same small fraction of 13 year olds are still learning code. Like many
things that require a little work up front, CW is worth it.

Marv OM,

  I agree with you. I don't see ham radio 'dying' at all. I operate in
excess of 12 hours a week on the air, basically all CW. Over half of
that is mobile CW.   The CW bands have plenty of ragchewing going on all
the time. I know, I am one of them. And I spend almost all my time on

only one band: 40M. A while ago I worked a 16 year old in Phoenix who was running homebrew TUBE-TYPE gear he had made himself, from old handbook articles. Said he just wanted to play around with tubes is all. Have worked several newer hams, some in their teens, who started with codeless techs, then discovered (some to their total amazement) that CW is an excellent ragchewing mode, and works very well. Some are excellent CW ops, know procedure, know how to listen, with less than 2 years experience in ham radio. They try to spread their enthusiasm to some of their non-CW friends, often with no luck. So they go their own ways.

The message here? You are either interested or you are not. Nothing new going on here. CW will continue to be used by the many who find it enjoyable, that is, can attain reasonable skill at it. Apparently many non-cw ops think we are all WORKING to use it, writing stuff down, using straight keys, egad!   Hey, it is just another language guys, if you are proficient, and is effortless to use. If you're not wired for it, there are many other modes to use. That is one of the beauties of ham radio.

73,
Don, W6JL

That is the point. There are many modes that don't use CW. Many that are interesting and satisfying that don't need knowledge of CW to use. The hobby is diverse and growing more so all the time. Yet there is truly only one test for suitability to belong to the club: knowledge of code.

I have the skill to pass the practical test (and have with the training software) through Advanced, yet I hold only a Tech ticket because of the code. I am still trying but I haven't found my method for learning code yet. I memorized the tapes, and have tried a couple of different computer tutor programs, but so far I have not been able to master CW. I will get it eventually, but it is not coming easy. I resent comments from other hams about being an "appliance user" or the comments on this list about code being a "moron filter." We all have assets in different areas. Learning the code is just plain a bitch for me, and is for others.

I see Techs filling key spots in many clubs, taking on important jobs in weather nets, coordinating public service activities and the like. Some of these folks will upgrade, and some will not. The code will be an obstacle for some, the practical test will be

an
obstacle for some, and some are content with what they can do with their current
ticket.
None deserve to be looked down upon because of lack of code speed.

The use of repeaters is one of the modes used by Technicians. Most modern
repeaters
ID in code as well as with a voice broadcast. There are other modes of
communication that don't involve CW at all, but your point is well taken. Many of
us are attempting to meet at least that minimum requirement.

I'm just an ex-ham, turned SWL.

As I understand it, a codeless license would allow use of phone modes,
including FM.  As I understand it, the strongest FM station, on a frequency
occupied by several FM stations, will "capture" the frequency.
     As I
understand it, one use of FM is for communication via repeater stations.
Furthermore, as I recall, repeaters identify themselves in Morse Code.
     My
question is: If you don't know Morse, how can you tell for sure that you're
using the repeater that you think you're supposed to be using?

Even if my question were about the only practical modern use of Morse Code,
wouldn't that be reason enough to require a certain minimum ability to read
the Code?

I just finished giving my seven year old his code lesson. He's learning the
code to earn a award in his Tiger Cub Scout group. He is a seven year old
that came to me to learn the code, and has no interest in radio, I would
think that anyone who is interested in radio should stop crying about it and
donate the 15 minutes a night for 2 weeks, and learn it.

No one complains about having to learn how to use windows before they can
surf the net....

Jerry N9DKQ
not a Brass Pounder.....

No it would not, since the repater can identified in other ways.
Indeed why do you ever NEED to know who owns the repater unless it is
not working right?

Hi Keith OM,

  Thanks for the thoughtful response.
  In WWII, the military taught Morse code to literally thousands of
people from all kinds
of backgrounds and abilities. Many of them were not doing it
voluntarily, either!
  I myself cannot see where using "tapes" and "computers" is an
effective learning method
for learning to use the code conversationally, as we do in ham radio.
First of all, it
is boring, listening to basically boring content being sent. As you
said, you eventually
memorized the tapes. That should be a clue that that is not the way to
learn the
code. Why not listen to something interesting instead?
  To become comfortable with CW, you have to 'USE IT' for some purpose.
Listening to real-live
conversations on the air is what made CW take off quickly for me.
Fortunately, in those days
there was no distracting temptation to somehow 'use a computer' (a
distinct advantage, from
what I can see). Second of all, it does nothing to teach you how to
listen to REAL
WORLD signals off the air, while at the same time, you are internalizing
what is being said.
   This is what worked for me. It has been music to my ears ever since,
and is definitely my

preferred mode for ragchewing on the air, compared to using voice. When you are otherwise just wasting time (ex: while driving), sound out everything you see written: street signs, license plates, etc etc. Make the sounds of CW very familiar to yourself, so that you associate those sounds immediately with the letters and numbers and punctuation. This all requires zero investment in $$, and can be done anywhere, anytime. Lastly, listen ON THE AIR to real CW QSO's, as much as you can, to all kinds of fists, in various conditions of in the clear to buried in the QRN/QRM. Watch out! You might suddenly become hooked; that is a risk you take. If that happens, you will suddenly see yourself on the other side of the perennial code argument, and can't for the life of you figure out what all the fuss is about; it has happened to many others, HI.

Lastly, like anything else, CW is not fun for EVERYONE. Some people just do not take to it. But that is a very small group indeed, I think. Especially at the moderate speeds required. After all, 5 WPM you can practically look up real time. 13 WPM actually requires that you know and can respond almost immediately to the characters. This does not seem to much to ask, for a large number of us. I believe it is an essential part of one's education to become a ham and to use HF (the 'real' ham radio to me).

You can do it.

73 and GL,
Don, W6JL

Keith,

I forgot one other important point in my post. DON'T WRITE STUFF DOWN. Copy it in your head; that is how you will be using it for ham radio ragchewing. Writing it down is an (unnecessary and limiting) habit that you don't want to get into if you can avoid it.   I sometimes run into ops on the air who ask me (as I am working mobile CW) "how do you write it down?". Egad.

73,
Don, W6JL

Well, well, well, looks like the good old FCC has its share of jerks like ham radio. Ironic that they are telling hams THEY can't speak their minds on the air, when they are using government computers and work time for this. Daily Digest recipients received this today.....

Wonder what ARRL thinks ?

When I was in the military they used to pound 5-letter code groups into your head 8 hours a day, 5 days a week for months on end. At that rate, you could copy in your sleep. After passing a military test at 35 wpm I nearly flunked 13 WPM in front of the FCC. The FCC wouldn't send 5 letter groups, they wouldn't let me use headphones, and they made me write it down with a pen and paper, no mill (typewriter). Took some on the air time to normal conversation.

So maybe we need a Ham Radio Boot Camp to force people to learn the code. Lets see.... we also need a typing test in case the new ham wants to use a keyboard. Two actually, one for the computer keyboard and one for teletype machines (you never know when one of those mechanical monsters will be only communications available). Almost forgot, a speech test in case he wants to work SSB or FM. :-)

Or.. how about we just give a written test on basic theory, regulations, and accepted operating practice?

I have finished with my final update on the items we will be taking to Dayton. Please be sure to read the info at the top of the page if you are interested in purchasing an item(s). If you emailed me about and item and I have not replied, it may be because I accidently deleted the message because of the large amount of replies or because the item is sold. I have marked all items that have been sold on the site. Hope to see everyone at the hamfest. Once again, the site address is:

http://www-personal.umich.edu/~robbinsm/heathkit.htm

Thanks,
Matt

Some software (e.g., Morse Tutor Gold) is pretty effective, in that it
sends typical, but random, QSOs. Of course that may be boring (many
qsos are!), but it is better than the old 5 element groups.

Phil

Hi Don!

Hmmm... I've heard this admonishment before, and I really don't understand it. I've been operating almost exclusively CW for over 30 years, and I've always written it down. It feels natural to me. It goes in my ears, it comes out my hand. It's not particularly legible above 30 wpm, mind you, but I can refer back to my notes in a ragchew and remind myself of what was said. (I can't recall a 10 minute monologue, but I can if it's written in front of me). Later on (2 or 3 qsos late), I can jot down a note or two in the log if I want. My wife can look over my shoulder if she wants. When visitors come over, they can see that the process actually works... morse in, words out. Above 35 wpm or so, I'll put the pencil down and copy entirely in my head, but if somebody throws a long unfamiliar and non-phonetic word out there at 45 wpm, I'll probably miss it, and I've found that's usually the case for people that "only copy in their head", even at slower speeds. And speaking of slower speeds, people that copy only in their heads have difficulty with copying 10 wpm qsos... I think you forget what was sent at the beginning of the word at that speed... hi.

Besides the practicalities, I think it's easier and faster to learn code while writing it down. As you decipher a letter aurally, you write it down, see it with your eyes, and it connects you with the part of your brain that already knows how to read and write.

Hey, different strokes for different folks, but I think it's a lot easier and more practical to learn code while writing it down, and make the transition to head-only copy later on if you need or want to. Am I the only one in hamdom that thinks so?

73,
monty N5FC

Dear oms,

Everybody's talking about electronic commerce.
But did you know that a lot of hamradio related equipments can also be purchased on the web?

The site www.geocities.com/SiliconValley/Park/9501 provides links to RX, TX, books about hamradio, computer stuff and more, that can be bought on the web. It also provides powerful search engines.

This site is NOT a commercial site! It's just a hamradio related site at Geocities, whose purpose is to help you to find what you're looking for on the world wide web.

Have fun es vy 73!

I recently purchased a Kenwood ts570s. Great radio. I hooked up the remote din plug per the manual to key my homebrew grounded grid amplifier. My amp has a control line and when grounded it keys the amp.

Im using pins 2 and 4 on the din. At first it worked great and keyed the amp 4 or 5 times. Then it stuck in the on mode. It appears that I have approx 1 ohm resistance at all times across pins 2 and 4 which keeps the amp keyed. When keying the mic, it is keying the ts570 relay because I can see pins 2 and 5 opening and closing. I also see between pins 2 and 4 that it always has about 1 ohm but when I key it it reduces to about 1/2 ohm. This makes me believe the relay is working.   On the diagram there is a 2200p capacitor (C286) across the relay contacts (pins 2 and4) My guess is that this capacitor has shorted showing the 1 ohm and when the relay keys, it keys across it reducing the resistance to 1/2 ohm.

The amp is a homebrew 813 (X3). The amp switching relay shows about 40 volts across the control line to ground. maybe this is too much voltage and shorted the small surface capacitor.

Any ideas?   Can anyone send me a picture of where this 2200p cap C286 is located. I have looked on the board but cant identify it.

Please email me at tcmedlin@cris.com   you will have to take the words "NOSPAM" out of my return address.

Thanks and 73,
Tom

Does anyone have any 220 MHz crystal rigs they would like to get rid of?  I
heard midland made some.

Well why not FORCE him to learn about radio before he can use morse code? It is ok for him to want to learn Morse Code and not anything about radio, but not the other way around?!

I would

> think that anyone who is interested in radio should stop crying about it and
> donate the 15 minutes a night for 2 weeks, and learn it.

If your son doesn't have to learn or like radio to enjoy Morse Code, then people who want to use or like radio do not have to learn Morse Code.

> No one complains about having to learn how to use windows before they can
> surf the net....

Of course not, no one complains about having to learn how to use a ham radio before surfing the repeaters either, but what if you made them learn Russian before they were allowed to use the internet? Then you would get the same complaints.

The best analogy would be having to learn Morse Code in order to use the
internet, as Morse Code has as much to do with knowing how to operate
and work the internet as it does with knowing how to operate and work a
Ham radio.

Now that sounds like a plan, a Morse code test to get on the internet
would keep some of you no-code peckerwoods out of the DX newsgroup
and about a half dozen other ones this 'discussion' doesn't belong in.

Is it REALLY necessary to post this crap to every ham newsgroup there
is ? Some of us have already learned Morse code, we aren't looking for
any good reasons not to....

But Don did say he was operating mobile CW; best *not* write it down, methinks!

I'm a bit in between; write down name, qth, rst, etc. -- but usually head-copy the rest.

Phil

Not up to those speeds, alas; above 35 wpm or so I tune in a slower station.

> but if somebody throws a long unfamiliar and non-phonetic word

Agree!

> And speaking of slower speeds, people that copy only
> in their heads have difficulty with copying 10 wpm qsos.

And with that: Too slow and you cannot copy words, only letters; then I must write it all down.

Phil

Learning morse code is like having to learn to program in binary before you can turn your computer on or learning to ride a horse before you can get your driving license just so you can relate to horse power.

Bring back the dark ages too!

If only it were that simple. You and the otehr ProCoders can't accept
the fact it aint so. Haven't you read QST lately
>
>No one complains about having to learn how to use windows before they can

You have to learn window before using the Net. Gee did not know that.

Indeed I know plenty of Net users that don't do windows. but then if
it were true that you did it is not likely that we would hear much
from them.

 But My My the Federal governement requires knowledge of windows in
order to surf the net. I never knew that Thanks for telling me

Hi to all,
 I've got an old (and broken) GX3000V transceiver from Telemobile. First of
all, I don't know exactly what it is. It seems to emitt at 173 MHz with
CTCSS, but I'm not sure. Any idea of wht it is? Is there on the internet
some repository of manuals and diagrams of such products?
Thanks to all in advance.

Adolfo,
I think the radio you have is a Standard GX-3000V. If so, it is a
64chan, scanning, EPROM programmed, 40W, VHF-FM transceiver. All the
info on freqs (RX+TX), the CTCSS, chan. number, priority chan, etc. are
all burned into a 2716 EPROM. You will have to erase the eprom and
"burn" in the new data. Hope that helps.

SHAME ON YOU FOR PICKING ON A NEWBIE!   You really cannot make any connection between a No-Code license, and a beginner's question about just what is meant by a term (wire antenna) that we all take for granted.   You certainly cannot make a valid correlation between Morse Code proficiency and intelligence or knowlege of radio theory.   We all started out ignorant, but some of us have had more opportunity to learn (contact with Elmers, study, etc) than others.   Worse yet, some of us, despite our code and theory expertise, still have lessons to learn in civility, tolerance, and the utility of extending a helping hand to new radio amateurs, regardless of their code proficiency -- that is a shame!!

That said, I'd better tell you that I am a 45 year licensed Extra-Class 35 WPM (on a good nite, HI!) CW operator, who wishes that it was not necessary to delete the code requirement, but realizes that the codeless Technician license is a net gain for our hobby.   I am not in favor of deleting the code requirement for all classes of licenses, but in view of the reluctance of many people to tackle it, I fell we may need to go that way.   For me, and for many of us, CW is one of the most attractive features of our avocational radio hobby; for others it seems a rite of passage, but while it may be a motivation filter, CW IS NOT AN INTELLIGENCE OR WORTH FILTER.

73 in the fraternal spirit of amateur radio, and
cw forever!

Im looking to set up a 1940's-50's era station for some kids to allow them

the use of some older equipment in order to familiarize them with newer technology.
Must be in pretty good "working" shape. Please, nothing thats been dropped out of a B-52 at 50K feet.

Any contributions would also be appreciated.

Please email me at paulvanasse@tp.net

Thanks and 73's de W1PEV

>
> Now that sounds like a plan, a Morse code test to get on the internet would keep some of you no-code peckerwoods out of the DX newsgroup and about a half dozen other ones this 'discussion' doesn't belong in.
>
> Is it REALLY necessary to post this crap to every ham newsgroup there is ? Some of us have already learned Morse code, we aren't looking for any good reasons not to....

Well if they would replace the Morse Code with Russian and make you learn Russian with a test to keep your HF priviledges, I'm sure you would be posting some comments on how you don't understand why you need to learn Russian if you only plan to use English. And then the Hams that allready KNOW Russian would tell YOU to shut up and stop complaining and posting as they aren't looking for any good reasons not to have to learn Russian.

There are going to be a lot of posts to newsgroups that don't happen to have subject matter that is of personal interest to you. Lots of YOUR posts will not have any interest to lots of other people too.

Read the threads of the subjects you find interesting and skip over the ones you do not. Seems like a lot of wasted time to reply to threads that don't interest you.

Yes, in science fiction movies you can show that Morse Code is very
important and usefull. But what if I make a movie in which Morse Code
causes the destruction of our entire universe?

Sir <sir@sir.com> wrote:

> There are going to be a lot of posts to newsgroups that don't happen to have subject matter that is of personal interest to you. Lots of YOUR posts will not have any interest to lots of other people too.

You appear to be so engrossed in your efforts to convince the rest of the world that you are incapable of attaining anything in life that requires effort that you seem to have totally missed the point.

The reason we have thousands of newsgroups is because the world is filled with millions of people with different interests.

Although your inability to learn Morse code seems to be the current focus in YOUR life, the rest of us don't necessarily view your lack of motivation as an earthshaking event.

REC.RADIO.AMATUER.POLICY was created with the sole intent of giving you a forum in which to air your views. Please feel free to use it to your hearts content.

Posting your Morse code dribble in multiple newsgroups is not going to gain you any support. Many unmotivated whiners before you have proven this point.

Some people have things they want in life because they are willing to expend the effort required to obtain those things, whatever that effort may be. It is obvious to us that you are not one of those people.

What apparently is not obvious to you is that the rest of us don't care.

73, Jim KH2D

You all contribute to the thread, so you DO all care, else I would be the only one and there would be no thread. I did not start the thread, and it appears to be the most popular topic here right now. Even YOU can not resist reading and replying to this.

For the past several days there has been a musical noise
on 17 meters. I receive it at 18.116 with the main signal
at 18.091. Sometime there is a similar signal offset to
the low side.

I thought at first it was originating locally, but I confirmed
that it was not in my shack.

Has anyone else observed this? Or can anyoen shed some light
on what mode it may be originiating from.

```
Thanks

Hey Rick
 I have tryed to listen hear in GA and I have not heard it. This may be
that I'm in the skip zone of this signal. I hope you can find it. I'm in
the Northeast corner of GA. You also might be picking up a image signal
from a local radio station or a image from the inside of your rig. For
example I used to have a SB102 and on certian spots on 10 I could pick
up a CW beacon OFC was the Beacon. I also didn't live very far from the
local AM station in Aberdeen and I could pick up harmonics and images
from them. Anyway I hope I helped you

Cutting here -n- there from all the threads:

> What if you wanted to play the flute, but a law required that you learn
> how to play the harp before you were allowed to play the flute?
>
> What if you didn't like the harp and only wanted to play the flute, and
> other flute players called you lazy for not wanting to waste time
> learning an instrument you had no intention of ever playing?
>
> They have no desire to use morse code. How silly it would be to waste
> the time to learn morse code, only to forget it once one has the license
> to go ahead and use voice.
>
> Only people who intend to USE morse code should learn it.

90% of the automobile drivers out there don't intend to use anything
they *learned* to get their drivers license, why not drop that
requirement too? Just let 'em all drive, drop the roadtest
requirement!

>That's ok we can argue all we want about keeping the code test, but something
>needs to be done to bring people into amateur radio not keep them out.

Ever stop to think that maybe the government intended to keep some
people out? Why not drop the code requirment for commercial broadcast
while we're at it?

>I suspect the same small fraction of 13 year olds are still learning code. Like
many
>things that require a little work up front, CW is worth it.
>73

And worth some pride too... ever heard of the rite of passage. Why
not do *something* you can take pride in instead of changing the rules
so you don't have to apply hardly any effort?

>   If you're not wired for it, there are many other modes to use. That is one of the
> beauties of ham radio.

Absolutly!!! The whole spectrum above 50 mhz is wide open for those
who have no interest in CW. You knew it before you got into radio...
So what's the problem? (but be forwarned... you'll hear alot of CW
there too. Moonbounce, contesting, etc.)

>The key to keeping code from dying is those of you who are proficient MUST take
>those of us willing to learn under your wing and pass it on to us....

Seems all the *old Timers* around here left me to my own devices...
Wonder *how* I did it...... hmmmmm

>If you efforts to find someone in Ft. Worth fail, Why dont you and your
>buddies get on the 2 meter radio and teach each other?

5 wpm is NO CODE. It's like an open book test. If you *try* to learn
the code with *any* effort at all, you *will* pass the 5 WPM test.
From there you'll meet hundreds of others in the same boat on 40 & 80
mtrs.
Plenty of practice to hone your skills. I had a problem getting over

10 wpm myself once licensed as a P, but got on the air with a friend
of mine for an hour a nite over the period of a week, pushing
ourselves to the limit, and passed General that weekend. *USE IT* once
you get it.

> I have the skill to pass the practical test (and have with the training software) through
> Advanced, yet I hold only a Tech ticket because of the code. I am still trying but I
> haven't found my method for learning code yet. I memorized the tapes, and have tried a
> couple of different computer tutor programs, but so far I have not been able to master CW.
> I will get it eventually, but it is not coming easy.

Sounds about normal to me...
if you study... it will come......

>If your son doesn't have to learn or like radio to enjoy Morse Code,
>then people who want to use or like radio do not have to learn Morse
>Code.

Did you're mama ever say "who ever said life was fair?" Just 'cause you want to learn gun handling doesn't mean you have to kill someone. I don't have a son, but I have to pay school tax.... WHAAAAA!

Hope I hit a few sore neves here. Amateur radio isn't the only thing in life that will require you to learn something proficiently to do (unlike my spelling to post to the group).

Take a look back at all the things that got lax on the rules in the past and see what happened to them. Do you really want amateur radio to go that route?

The hardest part about learning the code is to just put away all the excuses you have as to why you < can't / don't have time for / shouldn't have to / are just to darn lazy to > learn the code *and do it.*

Next thing you know, after they start packaging up an extra class radio amateur operators license in all the HF radios (sound familiar?) They'll be whining that the FCC should abolish CW off the airwaves 'cause they can't handle not being able to understand what is going on on the bottom half of the band.

I might could stomach letting a small portion of the prime DX bands go for the slow coders (P's),and leave the rest of the licese structure alone. But I hope at least that they leave the extra class alone so that *some* of us can keep a little pride in something that we *worked for* instead of crying about it 'till we got it for next to nothing.

If anyone out there is interested in *learning* CW and going to EXTRA in 6 months, e-mail me. All it requires is about 4 hours a week of *dedication*... You have to *want to do it* to do it.

The others.... FLAME AWAY, got my asbestos boxers on.

Breaker Breaker x.19x.xxx.xxx, catch me on the bottom 150 khz of the band good buddy, c'mon back!

Has anyone copies of the three articles, the references of which are below ?

H.B.G. Casimir and J. Ubbink "The Skin effect"
Philips Technical Review 28, pp. 271-283, 300-315, 366-381

These were published in 1967, or maybe 1968.

Looking for them at some local educational organisations libraries was no success.

Thank you for sending a copy of your reply by e-mail if you post a follow-up message to this one.

Hi,

I am designing a PLL for de-jittering an AES/EBU receiver clock. However, in order to determine the loop parameters, I need to limit the input noise bandwidth of the input clock (Bi) with a pre-filter, prior to the phase detector. Since the signal in question is a clock, I am wondering about the requirements of the prefilter concerning linear group delay. Is this generally a concern in this case or am I making more if it than I should?

Also, are there references for this sort of thing?

The received clock in question is at 12.288 MHZ and it has about 400 ps rms jitter.

Thank You
Tom

Well, the stuff going through the filter should only be a very, very
narrow range of frequencies, so the group delay can be significant before
it becomes a problem.

But since you can cobble a VCXO-based PLL from the circuit in the
Crystal Semi databook or you can buy the UltraAnalog reclocking
receiver module, why reinvent the wheel?

The problem is that a lot of this stuff has to be optimized with cut
and try engineering, since when you're dealing with pS timing the

parasitics get to be a big issue. And unless you have the HP modulation
domain analyzer, the Meridian jitter meter, or a similar phase
modulation detecting gadget that will let you get the spectrum off
of the demodulated clock, it's very hard to tell if changes you make
are making things better or worse. And there are some reclocking
circuits out there that do more damage than good.

Im looking for a new rotor along the lines of a Ham IV
It seems the only ones being sold are Yeasu and the meg buck M2
are there any others if so where can I get one.
Doug

Give me an example, I can't think of one thing you learn to get a
driver's license that you wouldn't need to know when you drive.

 why not drop that
> requirement too? Just let 'em all drive, drop the roadtest
> requirement!

That would be like dropping the rules and technical requirements on the ham test. Both are needed and used by everyone in Ham radio. We are talking about Morse Code which does NOT have to be used in order to operate Ham radio. If it was required to learn how to ride a horse to get that driver's license, then you could argue about that, but they don't test for stuff EVERY driver won't need to know in order to drive.

> Ever stop to think that maybe the government intended to keep some
> people out?

No, they droped the code on the tech to get people in, not out. They would drop the code for other classes too if they could, but it is an international requirement, so it will take a bit longer to do.

 Why not drop the code requirment for commercial broadcast
> while we're at it?

There never was or is a code requirement for commercial broadcast.

Really, there should be no requirement for Morse Code. Why they even
got rid of the 500 KILOCYCLE Morse Code Frequency for ships.

The thing about Morse Code is that it seems that the OLD TIMERS are
saying that we did it and you should too. That is baloney. What some
cheese with that wine?

I must agree that due to intl. treaty users on the hf bands are required to and should know cw. however I dispute the use of a speed test in that particular language for upgrade or access to spectrum. 5wpm satisfies the intl. treaty, we should be testing on tech. knowledge or added knowledge of the rules and regs, for upgrade purpose. It used to be that you needed to know hand signals for your drivers test. I believe they dropped that requirement in my state, but even if it was still in place, should we test how fast one can give them to upgrade our drivers license, or how fast we can recognize various shapes and colors of road signs. No of course not and speed should not be an issue in amatuer radio cw. Only a working knowledge of the code is needed and that is what should be mandated. If an individual wants to use cw to a large extent and increases their speed, so be it, but for others that use fm ssb etc. basic working knowledge is all that is necessary and all that should be required.

Well said.
I'm thinking of one area where I use Morse outside of ham radio: flying.
Navigation
aids identify in Morse, but a 5 WPM proficiency suffices. Good. I like your idea.

No, I'm saying that if you want the same license I have, pass comparable tests.
Is CW relevant? The Navy thinks not. It's still valid and satisfying.
I'm no 35 WPM Extra, just an Advanced. I took my last code test at the Dallas
FCC office in April of 1964, 13 WPM. The damn government already stole my First
Phone, I don't want it to redefine my ham license, too. Just create a new
ticket? Been done.
The service does need to evolve with technology, no one uses spark much.
I have no simple solution.

What the heck do any of these points have to do with Morse code in the
amateur service?

And if you want to say it is for security, you are not
> allowed to use codes when intended to obscure meaning.

Somehow you managed to obscure the meaning of your entire post.

Hi ,Dan!

Well, in just a few short days, you've managed to create quite a stir with your question (wink) ... 19 replies so far, and I bet it ain't over yet. I've noticed in the past, that nothing gets things stirred up quite so much as code and licensing issues. Anyway, well done!

I'd like to make an observation about human nature. [Now, please understand, I'm not talking about you. Heck, you asked a question, and you seem to be the best example of an open mind I've seen in this thread so far.] Anyway, I've noticed that when my mind is made up ahead of time, it tends to adopt as its purpose to support that decision in any and every way it can. And once that purpose is established, it will endeavor to interpret everything I hear and see as evidence I am "right". It doesn't make me right, mind you, but it's a mighty temptation to judge everything and everybody as either threatening or supportive, with no gray area between.

So whenever I encounter myself feeling defensive (or offensive) about a subject, I suspect I've pre-determined how I want things to be, or how I want things to come out. And that's a warning signal to me that my mind is pretty much closed. For me, the warning flags went up when I though somebody might threaten my beloved CW.

But on re-examination, I think both "sides" can find common ground. We don't necessarily need code proficiency tests for everyone to prove they can do it ahead of time. Nobody's going to get on the air sending morse when they only know 12 letters of the alphabet. So, maybe just a sampling of questions on the written tests, concerning the use of the mode, would be in order - to show an understanding of the mode and its operating procedures, for those who have the potential for using CW. Same would apply to voice, digital modes, repeaters, satellites, anything that has significant usage on the ham bands.

After that, it's up to us avid CW fans to promote and expose the positive and rewarding aspects of the mode (and there are many). We haven't done a good job of that thus far, maybe as a result of being so defensive.

As for actually learning CW, when I think about it (at least for me), the fastest part of the learning curve was when I was practicing it "on-the-air", without the pressure of "having to pass a test". It also happened to be the time that I really learned to love it.

Come on, folks - both pro and con - let's look for new viewpoints, consider them with an open mind, and see if we can't make the amateur service even more fun and more friendly than it already is.

73,
monty N5FC

Very well said, Monty!   Your post marks you as a gentleman and a scholar.   It is very difficult to convey to the no-code types what an aesthetic experience proficiency in morse provides, but even this long-time CW op has come to realize that using the code test as a barrier to amateur radio is unproductive.   To the others: Welcome to ham radio -- be tolerant, and 73.

Well all the "lazy and stupid" go use the Internet today for satisfying
their need for playing with technical stuff and communicating with
people. Those who are not "lazy and stupid" go through learning all
the electronics and regulations that you have to learn to get a ham licence.

You missed the point. the comment was the military doesn't use it , not true in
the
case of the coast gaurd. The guy was taught code as part off the m.o.s. to be a
radio operator.
I think as far as the coast gaurd the military still thinks it is important to
have
coded operators.

Nonsense. Morse is an encoding of the Roman alphabet. It has no words, grammar, or syntax to call its own. The words of some actual language (usually English) may be spelled out using the Morse alphabetic encoding, just as they might be spelled out using ASCII encoding or Baudot encoding, but the words remain words of the language from which they come. These words may be combined according to the syntax and gramatical rules of the language of which they are a part to form sentences, but the sentences remain sentences of the actual language, not sentences of some mythical Morse "language". What I'm sending here is text in the English language which just happens to be spelled using an ASCII encoding of the alphabet. Were I to send the text using Morse encodings of the alphabet, it would still be English language text.

While Morse is a CODE that can express a LANGUAGE, it transcends
ASCII characters and many other encoding methods because it has rhythm,
tone, style, and can be expressed uniquely, yet be commonly decoded
and understood. Degrees of appreciation vary from simple RR to
near opera like emotional involvement and appreciations. Perhaps
the links to music are where the bridge to a LANGUAGE like description
occur.

Morse also seems to use a special area of a person's mind that many
find stimulating in an unusual way. If you use Morse regularly, you
may find that you do other unrelated things and sense the stimulated
by Morse part of your mind participating.

Come on!! CW and MCW are modes that carry the understanding that the
method will be international Morse code.

What if you wanted to play the flute, but a law required that you learn how to play the harp before you were allowed to play the flute?

What if you didn't like the harp and only wanted to play the flute, and other flute players called you lazy for not wanting to waste time learning an instrument you had no intention of ever playing?

Some people want to get into the hobby of radio to talk on the radio. They have no desire to use morse code. How silly it would be to waste the time to learn morse code, only to forget it once one has the license to go ahead and use voice.

Only people who intend to USE morse code should learn it.

I thought the code requirement was for INCENTIVE purposes for a HOBBY =
that obviously needs to be regulated by the government so it won't turn =
into a fiasco like the mistake that happened with CB.  You don't need to =
learn CW to be a ham and if all you want to do is rag chew on local 2 =
meters or other VHF/UHF freqs that's fine.  They did away with CW in =
most military services because there are more effective ways to =
communicate reliably in war time.  War is not a hobby (to most) and the =
military has a hard enough time teaching people with a 6th grade level =
education how to fire a million dollor rocket by "pushing the RED =
button" that they don't have time to spend teaching a HOBBY to 6th =
graders, most of who did not want the job to begin with!  Ham radio is =
not a "way of life" it is a fun way to enjoy life.  A code requirement =
provides incentive to upgrade.  Our society (meaning the United States) =
```

over the last 10 years or so have become a bunch of whiners and get =
really irritated when told "no--you can't have it all right now!" If =
prospective hams spent as much time focussing on learning the code as =
they have whining about the requirement--there would be a lot more =
general class and higher I am sure. I don't like stop signs. Sometimes =
I like to drive fast. I think gas should be as free as water and I =
should not have to buy insurance and pay taxes. Learning the code shows =
you are somewhat dedicated to your hobby and perhaps worthy of increased =
frequency priviledges thereby allowing you to communicate with others =
who enjoy the hobby in other parts of the world. You are in effect an =
ambassador of the US! We could use more good ambassadors, that't for =
sure. Look at all the lids (former or current CB'ers) who took the time =
to learn the code then abuse it on 20 and 75. Perhaps the FFC is =
finally getting around to some long needed enforcement and are taking =
away the privilege. Just like driving--it is a privledge--not a right. =
So you don't need to learn much to ride a bike (scanners) but need more =
to drive a car (vhf/uhf no-code) but you need more road tests for cycle =
endorsements, big rigs, hazardous materials, flying an airplane, jets =
etc., pass 5 wpm you get some limited HF. Pass 13, you get to play =
with big rigs and big amps. Pass 20, you can do it all. I'd like to do =
it all and fly a jet but don't have the time to learn it all and get my =
20 just yet! And I still shy away from the CB-like chatter on the ham =
bands, but still love to chat on 2 meters and give out my 1010# to all =
the KC***** call signs I hear on 10 meters. I always try to tune into a =
CW rag chew just to see how many characters I can copy at 20+wpm from =
the oldtimers who don't need to write anything down! A friend of mine =
has over the last year spent close to $50,000.00 on antennas including a =
3 element rotatable full size yagi at 180 feet. 12 monoband antennas in =
all, and ALL are cut for the CW portions of the ham bands. CW is alive. =
Just because the military did away with it does not mean hams should =
also. After all, I want a college educated officer to get a VERY clear =
error free packet transmission before he tells the 6th grader to "push =
the RED button!" Kwitchyerbitchen and learn the code--or don't drive =
the big rigs!

Howdy Dan....In all the hoopola about whether anyone should or can't =
use=20
morse anymore.....a few points never seem to be brought out...or =
are=20
only mentioned briefly.=20
Morse - Is a mode that allows communications to be copied =
verbatim=20
easily (you can come close on voice or often do it if words are=20
standardized but its not easy)......=20
- Is a mode that is indeed digital but which =
requires the=20
most rudimentary interfacing and for which our own "processor" =
causes=20
error correcting and speed compensating depending on the ability =
of the=20
other "terminal" or "line" conditions.=20
- Is a mode which transcends language and dialect =
barriers=20
when suitable signals are used...such as the international "Q"=20
signals...and others. Hard to get most computer systems to do =
that yet=20
and our ability to merely speak one language (english for =
example) with=20
a wide variation of accents is hard enough sometimes.=20
- Is a mode whose "standardization" is unheard of in =

communications, where for at least a hundred years was not =
obsolete for=20
the purpose of basic communications (stuff that's GOOD for =
critical=20
use...such as lifesaving...and cheap commerce).=20
- Is a mode which, when the equipment is =
tired....just=20
needs a good dinner and a cup o coffee to revive it.....stuff we =
have=20
around anyway !=20
- When send using CW transmission (the 2 are NOT =
the same!)=20
is extremely effective, using suitable narrow filters at both =
ends, for=20
solid communications under the worst circuit noise and =
conditions.   It=20
might not be the very best...but when you consider the =
rudimentary=20
equipment needed it becomes mighty attractive.=20
- Is a mode which, because it only requires very =
basic=20
equipment, lends itself well to "field repairability".....a =
handy thing=20
if you've ever sat in a remote spot and listened to digital =
signals that=20

```
        couldn't connect to you...telling yourself...."if they'd only =
just turn=20
        'em on and off...I could get the message!  After all...what is=20
        slower....a slow sent message or one that never arrives????=20
       =20
        There's likely lots of other good and bad reasons why anyone =
should keep=20
        morse alive.   Yep its old.....but well made and the fact that =
it hasn't=20
        undergone a million transformations tells us all that it works =
well.  It=20
        is slow, but when mere text will suffice, is an adequate method =
of=20
        communication in conjuction with simple equipment.  It does =
require=20
        skill to use...but everything we do also does (Tell me that a =
windows NT=20
        system hung up on a satellite link doesn't require skill to =
figure out=20
        what happened!).  There is also a thing about operating morse =
that only=20
        morse operators may truely feel...but its a kindred spirit that=20
        transcends whether you were a mere ham or a skilled commercial =
operator,=20
        a struggling boy scout trying it or a pilot who was able to make =
himself=20
        understood when his mic stopped working.  To that last end I can =
only=20
        offer that to those who WON'T use it...it will always be a thing =

        despised....to those who do or have, a thing revered.=20

        only just turn <BR>'em on and off...I could get the =
message!&nbsp; After=20
        all...what is <BR>slower....a slow sent message or one that =
never=20
```

```
        arrives????=20
        <P>There's likely lots of other good and bad reasons why anyone =
should=20
        keep <BR>morse alive.&nbsp;&nbsp; Yep its old.....but well made =
and the=20
        fact that it hasn't <BR>undergone a million transformations =
tells us all=20
        that it works well.&nbsp; It <BR>is slow, but when mere text =
will=20
        suffice, is an adequate method of <BR>communication in =
conjuction with=20
        simple equipment.&nbsp; It does require <BR>skill to use...but=20
        everything we do also does (Tell me that a windows NT <BR>system =
hung up=20
        on a satellite link doesn't require skill to figure out <BR>what =

        happened!).&nbsp; There is also a thing about operating morse =
that only=20
        <BR>morse operators may truely feel...but its a kindred spirit =
that=20
        <BR>transcends whether you were a mere ham or a skilled =
commercial=20
        operator, <BR>a struggling boy scout trying it or a pilot who =
was able=20
        to make himself <BR>understood when his mic stopped =
working.&nbsp; To=20
        that last end I can only <BR>offer that to those who WON'T use =
it...it=20
        will always be a thing <BR>despised....to those who do or have, =
a thing=20
        revered.=20
        <P>73 - Gord VE1AJF...(and merchant R/O in recent times =

I am as sentimental about the mode as anyone, but morse is emphatically not a language, anymore than AMTOR or ASCII. The distinction is linguistic, but really commonsensical as well. A language must have a grammar and meaningful inflection (the swing of a bug is accent, but it doesn't convey meaning, as the rising pitch of spoken language at the end of a question) as well as syntax and lexicon. CW has a vocabulary (sort of) and some idiom/colloquial syntax, but no grammar, and it really just transposes whatever the written language of the communicators is into sound pulses. Finally, a language must be self-sustaining and complete, and morse/CW is not. It depends on its users having and using a real language, English, Spanish, Navajo, whatever, to encode and decode. No communication is possible using CW alone (hard to find two people who know CW and no language). Again, I ain't dissing CW, I love it, enough to keep it in its pure, lofty place.

I would like to know how CW maintains this "level of operator competentancy"? While "we" are debating CW, the Internet, cable modems, sat. phones, cell phones are passing us in technology.

Mike (KD4LLA)

For the people who like peace and quiet: a phoneless cord <grin>!

The longer Bill Clinton stays in office, the more we pay.

Our justice system pays because he has opened the door for millions of us to play games with the notion of telling "the whole truth" under oath. Our military personnel pay because they have to carry out their duties while grappling with questions regarding the motives of their commander in chief. Our national intellect pays because, with his myriad verbal contortions and willful deceptions, the president has become little more than a walking, talking insult to our intelligence. Finally, the taxpayers pay because, in his efforts to keep "looking presidential" and "doing the work of the people," he is creating more new programs and growing the government.

Haven't we paid enough already?

```

Hi,
    I'm after any kind of ham rig.  HF, VHF, UHF, QRP, SSB, FM, AM, Valve,
PLL, VFO anything!

I'm a novice and I need some gear to get me going...perhaps you have just
uprgraded to the latest rig, well please email me with what you've got.
I'll pay upto $60usd (�40ukp)

David

Hi,

I was wondering if there was any way for me to homebrew or make from a kit a 2 meter QRP <1W transceiver with only 2 or 3 frequencies and PL support.

You don't have to see, you have to hear in order to know it is a form of
communication hence, language. Even signing with hands to the deaf is a
language. Sign Language, most sign language does not involve letters but it
is considered a language is it not. There is a book written by Peter
Carron, W3DKV titled, MORSE CODE: The Essential Language.

It was the Essential Language 100 years ago back in the days when cars
had
hand cranks, and radio had spark gap transmitters.

Hello all,
 I have a Dentron Clipperton L forsale. It has new
572b's, new band switch and all of the Capacitors and diodes
have been replaced. I have schmatics too. The amp is wired
for 220 with 100 watts drive 1200 watts out on 80-meters.
The band coverage on this amp is 160-15. I'm asking 500bucs
plus shipping. If you are interested drop me a line. You
can see a picture of the amp as well as my station by clicking
here. http://www.dirtball.com/station.html
             73 and thanks for reading
                      Oris N3CND

Hi there! :) I am looking for the following musical equipment, working or broken, in any condition:

-OLD SYNTHESIZERS (knobs & sliders pref but unnecessary) -OLD KEYBOARDS
(1960's-mid 1980's) -OLD DRUM MACHINES   (Roland TR-909, TR-808, TR-606, etc)
-OLD VOCODER -OLD EFFECTS (anything bizarre / unique) -OLD ANALOG SEQUENCERS
 (with knobs for each step) -OLD MIDI gear (rackmount synthesizer modules)
-any MODULAR / PATCHABLE SYNTHESIZER (ARP 2600, EML-101, System 100m, etc)

Anything by the following manufacturers:

Moog, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, anything similar, especially more unusual stuff.

-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-Pearl SY-1 Syncussion
-E-mu SP-1200 Sampler Drum Machine
-Sequential Prophet VS rack
-Roland TR-808 Drum Machine
-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

http://members.aol.com/rolandman1

Please email me privately at rolandman1@aol.com if have anything I might be looking for or know someone who might. Thank you very much in advance and sorry if this message bothers anyone.

Well ....they don't know what it is but it takes brains so they want to do away with whatever it is. Typical liberals. This is the same kind of reasoning that has ruined our public school system. Why teach arithmetic when we have calculators etc......

Now, now....nothing more refreshing than a good, broad, factless generalization.....

I think a more appropriate analogy would be like a student who wants to read, write, and program computers to put up a fight against mandatory Braille. He just has no desire (that's D.E.S.I.R.E. as in want, not 'lack of intellect') to learn Braille or use Braille. Braille might be useful at times,

perhaps, but not for someone that would rather not communicate that way. Does this mean he has a contempt for Braille? No, just a disinterest. Let people communicate in Braille all they want to. Let them do it wearing nothing but jockstraps. The point is HE doesn't choose to spend his energy on it since he would like his energy spent reading or writing or programming.

So, how's your braille competency? Oh.. I see...you say you don't know any braille....hmmmm....gosh you must be one of them thar fruity brainless liberals, huh?

What the hell does this have to do with amateur radio? Digression is one thing, but this is way over the top, ranting politivcal spam.

A little further up the list you will find a new ham who just got his no
code license.
He wants to know what a wire antenna is.

First comes the NO CODE license quickly followed by the NO BRAIN license.

I wonder if "lack of intelligence" can be used to get a medical waver for
the CW test.

Did you bother to find out the context of his question or offer
any sage advice? Or did you see 'no-code' and assume he is a moron?

I see more asshole comments like yours in the ARS than in any other
walk of life. YOU are an embarrassment to the ARS, not HIM.

There is no need to assume anything.
If you pass a drivers license test and then ask someone what a stop sign is
that tell it all.
BTW did YOU bother to read his question........ He never said anything about
'no code'..... I did!
I perhaps may be an asshole.... but you sir, are a Stupid asshole.
There..... see ..... any asshole can call another asshole names here on the
internet.
I bet you wouldnt do it face to face.

William Lee   N5WRX
Notice I sign my real name (and callsign) and ISP.
I dont need to hide behind Daja News with an alais.

YOU were the one who said no code. That's the point, and that's why I classified your comment as an asshole comment. He may have known or heard about J-Poles, but maybe wanted to be clued in on something he heard as 'new'. His message could also be troll bait.

Driver's license tests and stop signs, huh? A better ARS analogy would be passing his Tech license, and then asking why he can't transmit on say police frequencies. That would be evidence of a failure in the testing system. But I hear many different terms for things, and if this newbie was unfamiliar with a vague term like 'wire antenna' or God forbid he was asking for clarification of what he thought does not prove any level of stupidity to me.

I saw some very helpful replies to his question, but not yours. Give a newbie some slack. I thought that's what the Novice and Tech classes were in the ARS to do...LEARN. Hopefully with help from those more in the know. Questions are never stupid. Actions without knowledge or bothering to ask ARE.

Anybody can be an asshole. Myself included. I did not call you an asshole, but I said your statement was an asshole comment. Because it was. If someone claims the same about my statement(s), I am at least man enough to examine them further.

You are right. Email is easy to hide behind. But that is not my motivation here. And yes, face to face, I would challenge you on this comment. If I make a similar one, and someone else says "Hey, that's an assholish thing to say." or "Why am I being such a dick?" Sure, I'd be offended. But once I got over the 8th-grade emotion of it, there might be some validity to their reaction.

BTW, show me a ham that knows the answer to every possible question about Ham radio. Hmmmm....guess we're ALL "Stupid Assholes"....

Another BTW....my ISP can't seem to fix their mail server. For weeks! Therefore, I am on DejaNews till they fix it.

Til then, I am incognito.... :) I am on the QRZ CD-ROM. With a little smarts, you could figure out which Ham I am, Dr. Seuss...

all three can do be modified to do MARS/CAP. All are nice radios too. You must decide on which features you want the most. The VX-1R only does 1/2 watt on battery, the 5R and 50R do 5 watts. The 5R has 6 meters, the 50 doesn't.

That's ok we can argue all we want about keeping the code test, but something needs to be done to bring people into amateur radio not keep them out. Soon enough all the brass pounders will be gone and then the FCC can sell of the rest of the ham spectrum. How soon we have forgotten about 220 MHz.

I have several VHF and UHF Motorola Maxar radios for sale.

The VHF radios are 25 watt radios. All radios are two (2) channels; and come complete with radio, mic, heavy duty locking bracket, and power cord.

You will need to purchase the crystals for your favorite frequencies, and have the radios tuned to your specs.

Radios do include a PL reed, already installed.

VHF radios are $25.00 + $10.00 shipping.
UHF radios are $35.00 + $10.00 shipping.

Shipping is USPS Priority Mail. Radios are in great condition.

Going fast, but still several left. Respond to hutch@jerrylee.com for
immediate shipment.

Thanks,

Eric - N8XHP

Without trying to sound obnoxious, I might not corss post to areas that
would have little interest.

Good luck

I may be getting some 3/4 or7/8 inch hard line that is 75 ohms. I remember reading a article about using 75 ohm line. The author only did test up to 2 meters. I want to use this line on 70 cm. Will cotangent transformers work for this band? I have heard if everything else is good you would only get a 1.5 to 1 match any how. Also do I have to mess with the antenna? I would like to use this at a 440 repeater site and the antenna is a 4 dipole array. Is there any one that sells matching transformers?

Any help?

Mike

Does any one have info on building notch filters to be used as a low power notch duplexer. I have heard you can make a notch out of shorted coax stubs. Are the stubs 1/4 waves at the notch frequency? Anyone have plans for these types of filters.

Mike

Shorted stubs are 1/2 wave, open stubs are 1/4 wave. Both reflect a short at the driving end.

ZD Engineering sells transformers for most types of CATV hardline.
They work fine, and also serve as substitutes for the often expensive
hardline connectors. The address I have is 605 Balsley Avenue,
Findlay Ohio, 45840. The phone number is 419-424-8765. ZD
Engineering is owned by Paul Darwactor W8ZD. I've used these
transformers and can recomend them.

(It has been some years since I've bought any. I can't guarantee
that the address and phone number are still good, but it is the

best info I have.)

Since the SWR isn't really that high, and excess SWR loss is relatively low, the question of why should we care is relevant. The reason is that the reactive termination can *detune your duplexer*. This leads to desense problems.

You can work around that in a couple of ways (absorb the reactance into the tuning of the duplexer, or cut the line to a multiple of a halfwave, remembering velocity factor), but it is generally better to match the system up as best you can so you can freely interchange parts without having to retune the entire system. A pair of these transformers are useful for doing that. (You still have to get your antenna tuned correctly, or you'll have SWR on the line anyway.)

I think you forgot to figure in the electrical propagation charteristics of the feedline.
It is likley you will find a 1/4 wave times .66 to get a closer value.
Thats if I remember correctly and you use a feedline with .66 VF.

Absolutely correct.... but I was not commenting on electrical Vs mechanical length. Only on 1/4 vs 1/2 wave. You must take into consideration the propagation factor (typically 0.66 for lots of cable) to go from electrical to mechanical size. Good comment.

0.66 applies only to solid polyethylthene lines of any impedance.

If foam-filled or expanded, or disk-supported, with air
space, then a higher VF will apply. Could be as high as
0.94.

I tried 1/4, 1/2, 3/4-wave notch filters - what you choose depends on the prupose. Second harmonic filter is 1/2-wave on the undesired frequency

Tried some 2m repeater filter improvement, 600kHz between RX and TX, 3/4 wave configuration with 2.2pF series capacitors. Result 12-15dB notch, but you must use some extra stubs to optimize impedance for minimum loss. 12-15dB is not much, it is low, and result of the small coupling capacitor or 2.2pF.

In an ordinary quarterwave band notch filter you achieve easily 40dB with a single tuned circuit, and possibly 90-100dB with two tuned circuits. It is very wide, the series capacitor is used to build a narrower filter, but has not so much attenuation, the larger capacitor the deeper notch, but also broader. The coax-stub is inductive on the frequency you operate, and it is tuned with a tapped trimming capacitor 1/3-1/5 from the shorted side.

believe the velocity factor for 7/8" heliax(hardline) is 0.82, cellflex is somewhat higher, possibly 0.9

Just pay attention to the lenghth so it mirrors the antennas impedance
and it will work GREAT! Tracy

I was just wondering why they still keep the Morse code testing requirements if the military doesn't use it anymore and telegraphs are not that common. I think because they stopped it for the marines, there's no point in using it in ham radio either. And if you want to say it is for security, you are not allowed to use codes when intended to obscure meaning.

Considering the comments on velocity factor, you willl want to measure the resonant frequencyt of the notch with some type of equipment. The stubs I've built had to be tuned to frequency.

If you need higher notch-Q (at the expense of slightly less notch depth) you can use a longer stub (i.e.: 3/4 wavelength, 5/4 wavelength - don't forget the

Vf adjustment).

Another approach to improving the notch filter is to use multiple notch
filters
separated by a 1/4 wave transmission line.

```
                  <--1/4-->
    In ------+-------+------- Out
                  |             |
                  |             |
              stub          stub
```

I've used this techniques to knock down a paging transitter signal located
very, very close (a few feet away). Tuning of the stubs was necessary. Start

with them long, and snip off 1/2" pieces to bring them into resonance. For
longer stubs, RG-213 gives better notch depth than RG-58 (due to lower loss).

Tom, N5EG

Hello Group,

Some time ago I bought a CB transceiver from someone. The transceiver is a Argus 5000 DX, I never heard of this brand and type of transceiver. But it works like a charm. It considers a 27Mhz transceiver BTW

Now I was wondering, when I bought it there were nowschematics or manual with it. Is there anyone who can help me. I already tryed the internet but until now I haven't found it.

Further more I look for some modifications for this transceiver, just for fun.

I also have a amplifier from Zetagi (BV-131) and now my tube has died :(I found it hard to get a 6KD6 for this amplifier, is there another tube that will work as good as this one. Further more I was wondering if I could receive a manual, I also don't have one for this amplifier.

Well that was it for now.

Kind Regards
     Marten Deinum

Morse Code has its uses and should be encouraged, but not worry too much
about those who don't know the code. I think the opportunity to pump
signals out on a narrow band to distant parts of the world has its own
charms.

The US Marines still use Morse code, and a few of us keep our keys handy
just in case.

Howdy Dan....In all the hoopola about whether anyone should or can't use morse anymore.....a few points never seem to be brought out...or are only mentioned briefly.

Morse - Is a mode that allows communications to be copied verbatim easily (you can come close on voice or often do it if words are standardized but its not easy)......

- Is a mode that is indeed digital but which requires the most rudimentary interfacing and for which our own "processor" causes error correcting and speed compensating depending on the ability of the other "terminal" or "line" conditions.

- Is a mode which transcends language and dialect barriers when suitable signals are used...such as the international "Q" signals...and others. Hard to get most computer systems to do that yet and our ability to merely speak one language (english for example) with a wide variation of accents is hard enough sometimes.

- Is a mode whose "standardization" is unheard of in communications, where for at least a hundred years was not obsolete for the purpose of basic communications (stuff that's GOOD for critical use...such as lifesaving...and cheap commerce).

- Is a mode which, when the equipment is tired....just needs a good dinner and a cup o coffee to revive it.....stuff we have around anyway !
- When send using CW transmission (the 2 are NOT the same!) is extremely effective, using suitable narrow filters at both ends, for solid communications under the worst circuit noise and conditions.   It might not be the very best...but when you consider the rudimentary equipment needed it becomes mighty attractive.
- Is a mode which, because it only requires very basic equipment, lends itself well to "field repairability".....a handy thing if you've ever sat in a remote spot and listened to digital signals that couldn't connect to you...telling yourself...."if they'd only just turn 'em on and off...I could get the message! After all...what is slower....a slow sent message or one that never arrives????

There's likely lots of other good and bad reasons why anyone should keep morse alive.   Yep its old.....but well made and the fact that it hasn't undergone a million transformations tells us all that it works well. It is slow, but when mere text will suffice, is an adequate method of communication in conjuction with simple equipment. It does require skill to use...but everything we do also does (Tell me that a windows NT system hung up on a satellite link doesn't require skill to figure out what happened!). There is also a thing about operating morse that only morse operators may truely feel...but its a kindred spirit that transcends whether you were a mere ham or a skilled commercial operator, a struggling boy scout trying it or a pilot who was able to make himself understood when his mic stopped working. To that last end I can only offer that to those who WON'T use it...it will always be a thing despised....to those who do or have, a thing revered.

Funny, Chapter 8 of "The FCC Rule Book" lists all the modes
available to the Amateur Radio Service and none of those modes
is Morse. I see CW, MCW, Phone, Image, RTTY, Data, Pulse, SS,
and Test, but no Morse.

I believe the International telecommunications Union, the international treaty
```

that authorizes the Amateur Radio SERVICE, requires Morse Code for amateur licenses.

We have been playing with the definitions of how much morse has to be known, copied, skill level, etc. but I believe international law still requires it.

o.amateur.swap

Need to check the steering diodes in the BC BPF for leakage. Quite often
the case with sets that have
had an open antenna attached while exposed to wind static, nearby
lightning, or transmitting into the
receiver, inadvertantly, of course. The latter usually takes the shunt and
some of the attenuator with it though. I think the other dude was trying
to say "things that do many things, can't do one thing well."
While there may be some truth to that statement, I find it hard to beleive
that the R&D team would
overlook any image, conversion mixing, or overload products that would
land(at least) in the amateur bands.

Well if you have to tune the stubs, would it also follow that you
would have to tune the section between the stubs? If so, how would
you do that?

Here, here!

I've been trying to explain to wife/family/friends for over 30 years, and haven't ever come up with a "reason" for using CW that satisfies those that don't have the experience. To those who have conquered their demons, learned to communicate via CW, and discovered the reward of it, no explanation is necessary.

If the code requirement is dropped (as it may well be), the incentives that lead one past the hurdles of learning the code, to the most rewarding experiences offered by CW, will be removed, and perhaps the ranks of CW ops will diminish. Some will be happy if this should be the case.

I think it's interesting to observe, that since the proliferation of digital modes in the last ten years or so, CW activity on the ham bands seems to have grown, not diminished, both here in the States and internationally. Considering that many countries don't have a code requirement anymore, I wonder why that would be, if it truly is a dead mode?

Saying CW is dead is kind of like saying pianos are useless because PCs with sound cards can make more sounds, and never need tuning. Those who play or listen to fine pianos can instantly perceive the difference, and those whose minds are made up won't be listening for pianos in the first place.

When I got started 33 years ago, I struggled for a year to get my code
speed to 13 WPM so I could get my "general" ticket and move on to fone
and rtty operation. But 99% of my operation since then has been CW.
Go figure, huh?

Yeah, but. . .what other communications methods are achieved via CW? You are

```
correct, strictly speaking, CW * Morse code. The misnomer is as old as the
vacuum tube, though the FCC can be forgiven a bit of idiom and tradition,
can't it?

Howdy Cecil.....Interesting point - often confused.....CW, MCW etc are modes of operation for a signal source.....morse is a mode (method) of communicating information, like voice etc.   I know you know the difference of course....what I see is when green hams (we were all one eh!) start to confuse all this not understanding that you can send morse over an FM circuit by keying a tone or by calling that CW. Then they're scratching their heads the first time we show 'em a signal generator heheh.
I think we all ought to make our "tech" talk a little more accurate by times...maybe.

73 - Gord

Well, sorry that the fonts messed up the drawing. It's pretty easy to tune the series section. Use 'T' connectors for connecitng the stubs, the input line, the output line, and the series 1/4 wve section.

Build the 1/4 wave series section by soldering a connector on one end only, then temporarily configure it as a stub in a simple test setup. Then tune it for a notch on the desired frequency by snipping off little bits of the non-connectorized end. Snip off just a little bit more to compensate for the connector that you will then be putting on the open end. Install the connector, and you now have the series line section.

I'm just wondering how you can say the SWR meter is EXACTLY the same but black face, not white like the original?!?!?!?! Then ask yourself this.....can it REALLY be EXACTLY the same?

Cary Fries wrote:

> For Sale:
>
> A 1965 Cobra Cam88 CB, has the old channel which was referred to as "B", but which was actually channel 24. The rig has recently been gone through to the tune of well over $150.00. The chassis looks a little gooey to me and could use some cleaning up.
> The channel knob is not the original, but it fits in very nicely with the scheme of things...you'd never know Otherwise. The S-Meter is a replacement, however it is EXACTLY the same size as the original except with a black face. The brushed aluminum face has a few minor flaws....nothing too terible. All the lettering is very good.
> Comes with original Mic; from what I can gather, it is an Astatic hand held contracted by B/K, Output is near 4 watts. Modulation is very nice with a Tug8-D104.....punchy yet mellow. It has built in switchable speech compression; Cobra calls it "Dyna-Boost". It has power cords for both 13.8 VDC and 110 AC,
>
> Also, I have a 1960 or 1961 Demco Power modulator. It's essentially a two tube preamp for use between the mic and mic input. I suspect that there is some collectablity factor here. It's missing the two tubes, and I'll be damned if I know what they are. I'm sure a Riders book could settle the score quickly. I can assure you this unit was working properly before I decided to salavage the tubes in all my pubescent pomposity. (duh) It'll need the proper amphenol mic connectors to be useable.
>
> Also, I have a Cobra SR 900 16 channel scanner in fair cosmetic condition with with three preset NOAA freqs. It's operated from a 12 volt power adapter. It has an external antenna output Obviously, this is a primitive item, and might be good for the casual listener. I'll throw in the last two items if we can come to terms on a mutually satisfactory deal.

Good Morning, Mr. Steven S. Weber:

I suggest the following:

#1) Go back and read the original post. Did I say "SWR Meter", as you say, or did I say S-METER. In the event you didn't know, they are usually two different items.

2) Go back and read the original post again, dolt! I DID NOT say they were Identical.
I DID say however, that they were of identical SIZE. WHICH I STAND BEHIND!!!!

3) Ask yourself if there is something productive you could be doing, rather than picking your nose and picking apart IMAGINED discrepancies in other individual's posts.

4) Have a wonderful day, moron.

Stephen S. Weber <kb9svw@bytehead.com> wrote in message

Friend of mine's son is a radio op in the coast guard. He was taught code, and can do about 15 wpm.

I am considering an open circuit coaxial notch filter for Mode-J (FO-20/FO-29 satellite) interference rejection. Reason I am considering an open circuit is to permit DC continuity (for preamplifier).I would use RG213 double shielded equivalent cable.

What 1/4 wave multiple would be best to trap third harmonic of 145.950 uplink without degrading loss or match at 2 meters??

> Morse - Is a mode that allows communications to be copied verbatim
> easily (you can come close on voice or often do it if words are
> standardized but its not easy)......

It is much easier to copy something from English to English, It is much
harder to copy something from a code back to English and thus more
chance for error.

> - Is a mode that is indeed digital but which requires the
> most rudimentary interfacing and for which our own "processor" causes
> error correcting and speed compensating depending on the ability of the
> other "terminal" or "line" conditions.

Speech is compatible to 99% of the population's "processor", morse code
only to a much smaller percent.

>   - Is a mode which transcends language and dialect barriers
> when suitable signals are used...

What?! Neither my English or other foreign language speaking friends
can understand morse code. This is a ridiculous statement.

> and our ability to merely speak one language (english for example) with
> a wide variation of accents is hard enough sometimes.

Yes, accents are hard enough, why make it MORE difficult?! If people
can't understand a store check-out clerk in some weird accent, how many
customers are going to understand him if he emits beeping noises from
his mouth?

>   - Is a mode whose "standardization" is unheard of in
> communications, where for at least a hundred years was not obsolete for
> the purpose of basic communications (stuff that's GOOD for critical
> use...such as lifesaving...and cheap commerce).

Yeah, that's why Police, Fire and Ambulance don't use it.

> is extremely effective, using suitable narrow filters at both ends, for
> solid communications under the worst circuit noise and conditions.

Completely worthless if the person on the other end doesn't understand
code! (which is about 99% of the population)

>   - Is a mode which, because it only requires very basic
> equipment, lends itself well to "field repairability"

A washboard is easier to repair than a washing machine too, but not a
good reason to mandate people learning to use it before they are allowed
to buy a washing machine.

.....a handy thing

> if you've ever sat in a remote spot and listened to digital signals that
> couldn't connect to you...telling yourself...."if they'd only just turn
> 'em on and off...I could get the message! After all...what is
> slower....a slow sent message or one that never arrives????

If no one on the other end understands code, it will never arrive.

Why don't advertisers make all their commercials on radio and TV in
morse code so the message could reach more of an audience in bad
conditions? Because MORE people would get the message EVEN IN BAD
CONDITIONS if it is in voice, than in a secret code that they don't
understand.

> There's likely lots of other good and bad reasons why anyone should keep
> morse alive.

There is only ONE. Because it is nostalgic and fun for many people. Don't take the fun away by forcing it on people that don't want to use it.

I bet if morse code was not a requirement (for certain classes of license) more people might take it up. No one wants to learn something that is forced opon them. People choose hobbies because they have an interest in them, not because someone hands them a fishing pole and orders them to fish!

> understood when his mic stopped working.

You people with your mic stopped working BS. Or stranded at the north pole with nothing for miles but a payphone with a broken microphone. Always have to try and make up some unrealistic situation to show how morse code could actually be usefull, and then THAT doesn't even fly!

I don't know of anyone ever going to be in the above situation, but even IF... would the operator on the phone or the police understand the code you are punching in on the touch tone pad, or would they think it is a prank call and hang up? Doesn't really matter, as this situation will never occur to either of us. They don't have payphones in the middle of the north pole. Especially with non-working microphones and working touch tone pads.

  To that last end I can only
> offer that to those who WON'T use it...it will always be a thing
> despised....to those who do or have, a thing revered.

Think about what you just said! Think about WHY it would EVER be DESPISED! NO ONE would ever depise it if it wasn't shoved down anyones's throat!

People don't DESPISE model airplane kits. They might if people were FORCED to build them in order to take up some other hobby!

To YOU and many others it is fun, to others it is boring and slow.

To some people restoring old cars is fun, to others it is boring and slow.

At least car restorer's don't want that hobby to be a requirement in order to enjoy some other hobby.

I know a lot of obsolete skills too. Tape editing with razor blades and tape come to mind. Perhaps that will save my life in some emergency when my digital audio workstation breaks, or will allow me to edit in bad weather conditions.

ALL the below are VERY CORRECT and TRUE, BUT,
is that ANY reason to use it on a TEST for getting your ticket
keep the subbands..if you want, EXPAND them if you like
IF we use this MODE to test people should we not have a test to see if you
can talk correctly for phone, type correctly for packet,
and expand that by building your own computer for digital modes.
THAT'S ALL I AM AGAINST IS FOR A TEST
keep the mode if it makes you happy but don't use it for TESTING.

Come on, give Bill a break. He might have got into trouble, but he did it
because he was passing on his products, and technical knowledge to the
public. I got his books, and believe he was the one that started the now so
popular idea of modified scanners, and modified CBs. I support Bill and his
ideas, I just think he pissed off the wrong person, and is now getting the
shaft.
As far as the antenna goes, being on the east coast, sorry no can do.
Good luck Bill.

Figures. All the "Mackaloons" are out in force cackling with glee over the demise of Bill Cheek... Ah, but who will be laughing when the government comes knocking on YOUR door to collect your scanner, along with everyone elses'??

I won't find that funny, even if you do deserve it.

Hi there! :) �I'm an electronic musician seriously searching for old electronic musical equipment from the 1960's-1980's. I will consider anything, in any condition - even broken units or parts:

-Old synthesizers   �(knobs or sliders preferred but not necessary)
-Old drum machines
-Old sequencers
-MIDI equipment
-Effects processors
-Vocoders

Moog, ARP, Sequential Circuits, Oberheim, Roland, Korg, Yamaha, EMS, EML, Buchla, Serge, Ionic, PPG, Digisound, Paia, Aries, E-mu, Polyfusion, Steiner-Parker, Mutron, Maestro, Electro-Harmonix, anything similar.

Roland TR808 Rhythm Composer
TB303 Computer Controlled Bassline
Synton Syrinx
Gleeman Pentaphonic CLear

PPG Waveterm or Wave series
Digisound modular series
Maplin kit built synths
EMS Synthi 100

For a better idea of things I am looking for, please see:

http://members.aol.com/rolandman1

If you have anything you'd consider parting with or know someone who might,
please email me at rolandman1@aol.com
Please respond privately and include your phone number as well if you'd like.
�
Thank you very much and apologies in advance if this message bothers anyone.

We will demo Iphone Repeaterlink to a 5th grade class today.

Please call for K2DJ. Look for the K2COP repeater in the REPEATERLINK room.

We will be monitoring the repeater output in Fairport, NY at 1515 UTC (11:15 AM eastern time) today, Wednesday, April 14.

Sorry for the late notice. This demo is for a Radio Coaches class (the last of 10 classes).

73,
Peter, W2SKY

Hi,
I've recently got two Motorolla CD 100 SRBR (Short Range Business Radio) rigs, they are set on 461.170mhz. I've been told that I can convert these for use on the 70cm/2m band?!
Is this true? Plus I need any info on these rigs...Plus(again) does anyone have any info on "Zycomm U-200" SRBR handheld?

Cheers..

David

rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.commercial-lmr,rec.radio.lmr-commercial,rec.radio.misc,rec.radio.swap

I have several available.

Both UHF and VHF to choose from. They are all very
clean, and power up and receive nicely.

Package includes radio, power cord, microphone, and mounting
bracket.

These radios are two channels with PL installed. One channel
is active - the other is empty. Currently in the 151 Mhz area
for VHF, and 453 area for the UHF.

$25.00 per VHF radio, and $35.00 per UHF radio - Plus $10.00
USPS Priority Mail shipping - shipping discount for multiple
radio purchases.

If you have any interest in these radios - please let me know
ASAP.

Thanks for your time...

Helo OM's,

I'm looking for information about the Motorola carvox 3100 autotelefoon for using it as a 70cm packet station. Are there some people out there with service manuals and / or having used it for 70cm radio amateur freq.?

Greatings Fred Krom, pe0fko.

Here's a new service I'm trying out on my website:

If you have recently passed your amateur exam and are waiting for your calls, visit this page and enter your name and state. Each night my computer will check the FCC daily activity and if your name is in the list, it will automatically send you an e-mail with your new callsign!

This is brand new and mostly untested, so let me know how it works and how you like the idea!

I am going to add a non-web way to register (like via e-mail) so users without web access (like Juno) can use it.

The URL is: http://davisfamily.nu/hamcalls.htm

73,
Chris KB0WWP

Could you give some more info? Motorola produced numerous mobile radios
in the 1960s through the 1980s with model numbers ending in 3100, which
would indicate a radio with CTCSS squelch and one frequency. The complete
model number such as U44LHT-3100 or similar will be needed to identify your
radio. Most of these Motrac/Motran/Mocom 70/Mitrek series radios will tune
up just fine on 70cm if originally set for the 450-470 MHz commercial band.

Rx/Tx turn-around time may be a bit slow on some of these units for packet
work, others will be fine. But we need a complete model number to determine
which of several models you have. Or post a scan in alt.binaries.pictures
with a pointer to it here.

Hi Jay,

Al the info i had is from the type number plate, it is:

MOTOROLA LTD
TYPE: D-SUF3160A-0   SERIAL NO: 663QRN.....
SIS   F19ATA6966AG   CARVOX 3100   MFG. IN U.K.

Thats al.
In holland the system is used on the old ATF2 net witch is not working anymore.

Greatings Fred

I have an RCI-2970 with a problem
.

When the radio is unplugged from the power source and sits on the shelf for about one month, the memory battery goes flat. Then when you go into the memory circuit, it keys and you have to shut the rig off to get it to reset. This does not happen if the battery is good. Any ideas why the battery dies so soon?

Thanks de

Jason

I just bought a Yaesu FT100 from AES.
First impression of the radio was good. Works great on HF (40M and 75M
)
I entered some local repeater frequencies and scanned for awhile. When
the radio stopped on a couple of repeaters, I noticed that the signal
strength was less than half of what I had gotten on other radios hooked
up to the same antenna (Comet dual band ground plane @ 70" on top of
tower).
Repeaters that normally were full scale are now S-9 on the FT100. I
looked all through the menu to see if I had some attenuation on but
there is no way to attenuate the receiver on 2M. I also read all through
the manual, but did not find anything on changing the sensitivity of the
receiver on VHF. The receiver on VHF and UHF is very dead. My wife was
about 200 yards down the street in her mobile (50 Watts) and I was
only getting 40 over S-9, the signal should have been FULL SCALE and
then some.

Has anyone else experienced this problem wit the FT100's receiver ?
I plan on calling Yaesu tomorrow about the dead receive on the radio.

Thanks in advance,

Jim N5JIM

radio.swap

I'd like to trade my 1965 Cobra Cam 88 tube type, 24 channels. (One of the few early units that came with an extra channel).

Recently gone over electronically, although the chassis is a bit gooey and needs a good cleaning.   Will go base or mobile with included power cords and mounting brackets. Has original hand held microphone, but sounds great with a
TUG8-D104.   The channel knob is not original, but you'd
never know it if I hadn't told you. (blends in real well with the scheme).
A few minor blemishes in the brushed aluminum face. Also the S-Meter is a replacement....
It is exactly the same size as the original, but it is black face rather than white face. Has fine tune, squelch, PA/CB, and "Dyna-Boost", (or speech
compression).

I'd like to trade for a nice chrome Vibroplex paddle or similar.   I'll entertain all ideas, including swapping for a repair job on my Hallicrafters
SX-24. It needs the four section electrolytic cap in the power supply replaced, and possibly a new choke which I think is what took out the cap to begin with. I have a schematic to go with it, but I'm not talented enough to fix it.

Please email Cary at cfries@tic.bisman.com.

Regards,

Cary Fries

Not sure why this is on the "swap" grp, but I was surprised at the good sensitivity on 2M with my FT-100. I'm getting clear reception on repeaters that are usually scratchy sounding. Don't have 440 ant. to try but County EMS (450.xxx) comes in just like scanner using 2m ant. HF works great too. DSP is very impressive, now if I only had smaller fingers or the FT-100 had bigger buttons it would make a nice base rig (which is what I am using it for.)

Do you think that the S meter reading is more not accurate on uhf/vhf and
the radio still has fantastic
sensitivity?
If you inject a calibrated signal into the antenna port and do a 12db sinad
test, then I we could put more
faith in these comments.
How about at least having someone driving out to the fringe signal areas
and compare which radio has the best
ability to pull the signal out of the noise floor?
I have never felt any of my VHF/UHF radios had more than a relative signal
strength meter.
The Quality of the directional couplers and RSSI calibrations are more in
question to me.
Let me know your thoughts Joe?
I enjoy the intent of finding all the faults in the FT-100.
I see Yeasu has been responsive in complaints, and aims to please so far.
I think it is keeping it's head above the water quite well so far.
I will wait out another month or so before I purchase.
Jack

See this site for new freeware for the TenTec RX-320 receiver:

http://www.ns.net/~jpsmith/jimweb/shortwave.html

I developed this to suit my own style of DXing. It has no graphics, lots of keyboard/mouse shortcuts, and is very database oriented.

In includes a scanner which overcomes a major problem with TenTec's scanning function: the scanning is done with Fast AGC, and is timed to allow for the settling time, so that strong signals do not mask adjacent weak ones. Scans may be saved to disk so you can compare them over time.

The X-base compatible databases allow for import/export in comma-delimited text format (also an improvement over TenTec's program).

The entire download, including some large sample databases in only one MB.

Give it a try, and let me know what you think.

Regards,

Jim

Hi Jim,

I like your implementation of your controller software. I like loading a database and just clicking on a entry and have it load the frequency into the radio. Really nice. I'll try more later as this is just first impressions. My biggest problem so far is the 1024x768 video mode you used. It makes it almost unusable in any other mode and I hate 1024x768 mode as it is far too small a print for me.800x600 is perfect on my 17" monitor. If that could be fixed it would be great and I'm sure most would appreciate it. Great job though. Thank you.

Jerry

The reason I posted this on this newsgroup is because this newsgroup is read by a large group of hams each day, and I thought that I would have a better chance of maybe finding what was going on with the FT100 that I bought. I am so sorry for any inconvenience that this post may have caused you. I am glad to hear that you are not having any problems with your FT100. It is so funny when I see responses to posts about problems that people are having with their radio. Some people take it personally when they read about defects pertaining to a radio that they have. They act like you are talking about their child or something.

The fact remains that I have a serious problem with the receiver on the FT100 that I purchased. I have received many emails from FT100 owners, and none have had this problem. The dead receiver on VHF and UHF does not seem to be a defect with other FT100s. If not for the receiver problem, the FT100 seems to be a neat little radio. I am shipping it back today to get the problem taken care of.

I have called Yaesu and they feel that there is a problem with this radio.
After reading many emails from other FT100 owners, I feel that this is not a problem with other Ft100s.
I have done numerous tests with the radio.
I have keyed my HT in the house, sitting directly under the tower. Transmitting 500mw from the ht's rubber duck antenna, the FT100's meter read S-9+10, transmitting 1 watt from HT, the FT100 displayed S-9+40, When I transmitted 5 watts from the HT, the FT100 finally showed full scale (S-9+60). The meter should have been full scale at this distance with 1/2 watt.
I also was talking to my wife in her car. She has a 50 watt mobile. She was transmitting full power about 3 miles away on simplex (146.54mhz). The FT100's meter was reading S-3 to S-7 with a lot of static. Even when she was less that a mile from the house, the meter on the FT100 was still just S-9+20.
It is not just the low S-Meter reading. The receiver is also very attenuated.
There is static and white noise on repeaters that are full scale and full quiet on other radios that I have had hooked up to the same antenna.

Dr OM/YL

This mail to inform You that I resently have uploaded an updated beacon list covering a 70 MHz world wide, a 50 MHz world wide in six continantal splitted listings covering, Africa, Asia, Europe, North America, Ocean/Pacific and South America.

These lists can either be viewed in html or downloaded as a ZIP file in band pacages, the ZIPed version contains a bandplan aswell.

These can be found at http://www.qsl.net/oz6om/

I hope You find the listings of use ...

vy 73 de OZ6OM "Matt"

I'd like to put in a plug for 1280x1024 display resolution support too.

```

I cannot believe how great Ebay is to sell stuff, how absolutely terrible it is to buy stuff. People will pay top dollar and more just because its an auction and they feel the need to "win".

```
Some examples: D-104 Silver eagle- retail new $109.99, EBay used $125
            Leader sig gen - retail new $119.99, EBay new $124.11
            D-104 grey base - retail new $85, Ebay used $95
```

The list goes on and on. It begs the question: why do people pay so much for this stuff? Is it only to "win"? Is there another reason?

Brian

Thanks Matt, you're allways the best informed and it's very useful
with the emerging Es season.

Cheers and beers

73's dr OM de Marcus

I think you hit the nail on the head. I have sold alot of stuff on ebay and can't believe how much some people paid for certain items. It must be the thrill of victory!

For Sale:

A 1965 Cobra Cam88 CB, has the old channel which was referred to as "B", but which was actually channel 24. The rig has recently been gone through to the tune of well over $150.00. The chassis looks a little gooey to me and could use some cleaning up.
The channel knob is not the original, but it fits in very nicely with the scheme of things...you'd never know Otherwise. The S-Meter is a replacement, however it is EXACTLY the same size as the original except with a black face. The brushed aluminum face has a few minor flaws....nothing too terible. All the lettering is very good.
Comes with original Mic; from what I can gather, it is an Astatic hand held contracted by B/K, Output is near 4 watts. Modulation is very nice with a Tug8-D104.....punchy yet mellow. It has built in switchable speech compression; Cobra calls it "Dyna-Boost". It has power cords for both 13.8 VDC and 110 AC,

Also, I have a 1960 or 1961 Demco Power modulator. It's essentially a two tube preamp for use between the mic and mic input. I suspect that there is some collectablity factor here. It's missing the two tubes, and I'll be damned if I know what they are. I'm sure a Riders book could settle the score quickly. I can assure you this unit was working properly before I decided to salavage the tubes in all my pubescent pomposity. (duh) It'll need the proper amphenol mic connectors to be useable.

Also, I have a Cobra SR 900 16 channel scanner in fair cosmetic condition with with three preset NOAA freqs.   It's operated from a 12 volt power adapter.   It has an external antenna output   Obviously, this is a primitive item, and might be good for the casual listener. I'll throw in the last two items if we can come to terms on a mutually satisfactory deal.

For Sale: Uniden pro 500B 40 channel CB.   This is a gimme too.....I'll make you a great package deal. (I think it was 40.00 new!)

Now for something completley different, any call for THESE odd balls? I have two mint woofers for the JBL Model 4401 Control Monitor speakers. They appear to be 51/2" from surround to surround, or 61/2" from one end of the brushed aluminum frame to the other.   The speakers are mint with heavy magnets, rubber surrounds, and white cones. These origianlly served in radio monitor duty, but the moronic jocks insisted on driving the weasely amp just past the point of distortion and subsequently turned the tweets to toast.   You can have them naked, or I can ship with the cabinets, your choice.   The cabinets are in pretty fair shape.

If you'd like to know more, Please email me cfries@ tic.bisman.com

You probably want to sequentially turn on the voltages anyway, so why not use a relay to turn on the +5 from the +15 supply which in turn operates a relay to turn on the -5 volt supply. SPST will do fine!   Cliff K7RR

You have an older one.  The newer ones are not type accepted and no
longer have the type acceptance label.  If yours can be front panel
programmed, it is illegal in the U.S. regardless of what the label says.

Near mint 160-10 Meter transceiver with digital display, CW filter,
operator and service manuals. Very low hours...it still has the original
final tubes. No problems, a few documented reversable mods added from
Kenwood and QST hints and kinks. Two BNC connectors added on back to allow
external reciever. Asking $350. Local pickup in the Detroit MI area
preferred. I am the second owner (non smoker) and have had it since early
```

eighties.

There ain't no stupid questions!! You are correct, the UV kills ropes that is why generally for towers and masts folks use wire or cable. If the installation is not too big, like a vhf vertical or small beam you can get guy wire designed for TV antennas at Radio Shack (as well as other hardware needed for guying). Regarding ropes, if you go to your friendly building supply store and look on the packages (or they may have a chart) you will find data as to the characteristics of the rope, breaking force, stretch, etc. Included in the chart us UV resistance. Of course the cheap stuff has very low UV resistance (as I found out when I put up a dipole with it a few years ago). If putting up wire antennas it pays to get the better ropes. Good luck, Bill, WB2JMX

Hi all and thanks for reading this,

I have an Alinco ELH230g 2m SSB/ FM Linear that I picked up locally at a ham fest with the view of sticking it on the back of my FT290R Yaesu.

I was told that the final was blown when I bought it, simple I thought just replace the final. Problem is I cant tell what the final is, as the letters and numbers have been worn off and I have not got a schematic.

Can anyone help with identifying the offending part?

Please e-mail me direct as I don't visit the news groups often.

Thanks in advance

Is there a clock program for Windows98 that shows UTC and local time in the corner of the task bar? Is there anything like that maybe a small clock that can float 'always on top'? re: here or email... thanks!

The very best in excellent condition. All the serial numbers match on the coils and the head. The head covers from 2MHz-425MHz. Cabinet restored like new. With a copy of the manual $150+ shipping.

Hi

Try World Time. You can have anything from one to ten different times plus
UTC and local time.

It' s freeware.

/Sven

Hi there! :) I am looking for the following musical equipment from 1950-1990, working or BROKEN, in any condition:

-OLD SYNTHESIZERS
-OLD KEYBOARDS
-OLD DRUM MACHINES
-OLD VOCODER
-OLD EFFECTS
-OLD ANALOG SEQUENCERS
-OLD MIDI gear
-any MODULAR / PATCHABLE SYNTHESIZER

Moog, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, anything similar, especially more unusual stuff.

To get a better idea of what I'm looking for, take a look at:
http://members.aol.com/rolandman1

Roland TB303 Computer COntrolled Bassline
ROland MC202 Microcomposer
TR-909 MIDI Rhythm Composer
TR-808 Rhythm Composer (black with multi-colored buttons)
Polyfusion 200 Modular
Roland System-100m modules or full system

Please email me privately at rolandman1@aol.com if youve got anything like the
above or know someone who might. Thanks in advance, sorry if this message
distrubs anyone.

CROSS BAND REPEATER
1) Turn on Radio
2) Lock the keyboard (look in owners manual on how to do this)
3) Turn off Radio
4) Press and hold [SQL] & [MAIN] & [BAND] & turn the power on

To stop cross band repeat
1) Turn off radio
2) Unlock keyboard

Hi,
I'm about to start training for my NRAE (UK). I need a HT or moblie
that is under �100
Somthing decent. Doesn't have to be a "brand". I'm not bothered about
apperances but it must work to the UK specs etc...

Please email me:

Dear all,

Please subscribe and discuss at Icom IC-2800 community!!

http://www.onelist.com/searchlist.cgi?searchval=icom-ic2800&language=0&maturity=0

New top-of-the-line dual bander adds video excitement to audio excellence. Advanced features and a unique, 3" (diagonal) TFT color LCD display await you. View GPS and APRSTM maps, catch SSTV or broadcast TV,... even watch digital camera and VHS images. Experiment! The high visibility screen accepts NTSC video input (PAL in the European model) via a simple connection port that accepts most standard camera plugs. A 6-pin data port makes the '2800H 9600bps data ready. ICOM's popular independent band controls are here, making it easy to work V/U, U/V, or cross band repeat. Also get: CTCSS encode/decode, simple band scope, fast scanning, 232 memory channels, air band reception, and much more. The control head is totally separate from the main unit, with a connection cable and independent mounting brackets included as standard equipment. Explore SEEING as well as hearing more of today's amateur activity.

Best Regards,
Bo

Hi All,

Just a note... if any of you think the actions of SWATCH is disregard of international amateur radio regulations from "just a small company", be sure to take a close look at the bio on Mr. Nicolas G. Hayek, the co-founder, Chairman of the Board of Directors and Chief Executive Officer of the Swatch Group.

At http://swatch.com use the site navigator (extra little window) and click on "Mr. Swatch".

Mr. Hayek, who basically told the ARRL to "kiss off" in my opinion (See The ARRL Letter, Vol 18, No 15), is MUCH MUCH more connected than with Swatch. This is a man with MAJOR connections to many large ventures.

What will be the next move of big business?

73,

Dennis - N4NR

```
Let's help the Cheeks raise cash by seriously considering purchasing some of
his gear. I just don't need a tower at this time or I'd jump on this offer.

Or perhaps as part of a cease-and-decist and/or plea bargain
arrangement?

If only my CC&R's allowed a tower, I'd snap it up in a flash. ;-)

Does anybody know of the mod to open up the TX on the IC-T42A HT?

Any help would be appreciated.

Thanks,
Pat

You can't be serious, Dennis. Life is so full of bumps in the road, I honestly can't fathom how anyone can be upset over a 100 mw, temporary piece of space junk.

If this is a big problem for you, I sure hope you never have a flat tire on your car.....

Could someone point me in the direction of a good tech article regarding proper care and charging of Li-Ion batteries. I believe they should be completely discharged before re-charging. Is this correct. Also, are there problems associated with over-charging?

Thanks

KC0CNU

Try http://www.cadex.com/cfm/index.cfm?Pg=314&Lp=55&Db=&Mo=

They have GREAT info on many types of batteries. DO NOT use a
nicad/universal charger!!!

These can be found at eBay at the following URL's:

Antique key (J.H. Bunnell) and sounder:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=60503038

Two different J-37 keys -- both excellent:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=60610820

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=60616542

It will be worth your time and money to join eBay (no charge) and begin to find the ham gear you're looking for at a fair price! The auctions are a blast and some REAL bargains take place regularly!

If you have questions about any of the items, email me at:

cosmos41@ix.netcom.com

Lithium Ion batteries DO NOT have memories like Ni-Cad batteries. Charge them when ever you want, just keep them charged when not being used often. My 3 year old Toshiba laptop came with a lithium ion, and it's still going strong.

For Sale :   Kenwood TM255A

2 Meter All Mode Transceiver

This radio is in "AS NEW" condition, 10 out of 10

No marks or scratches at all
Non Smoker
Never used mobile
40 watts RF Out (Low - 5w, High - 40w)
100 Memory Channels
Detachable front panel for remote installation
Digital meter with peak hold
Menu driven for versatility that is beyond compare, 78 functions
Display brightness control levels
Frequency step control, both FM and SSB
Auto power off
FM and SSB microphone gain control
Packet ready (9600bps)
Dual digital VFO's
Auto mode selection
Auto transmit offset for FM repeaters
Multiple scan modes
Sub audible Tone board installed
DTSS and CTCSS
Built in TCXO
Original box, all manuals, Original multi-function microphone included

You can have a modern digital radio for the price that people are selling older 2m all modes
$ 500.00 obo

And for those who didn't go the interesting web site recommended at the beginning of this thread,

http://www.cadex.com/cfm/index.cfm?Pg=314&Lp=55&Db=&Mo=

Overcharging is particularly bad for LiIon batteries; can cause metallic Li to plate out, which apparently is bad and potentially dangerous.   Trickle charging ala NiCads is verboten.

OTOH, LiIon chargers take this into account. So, don't try charging them in any charger that wasn't designed for the job!

Hi,

i m in the process of looking at a place to buy my VX-5R (i live in montreal (sorry for my english) if you have an idea of how i can order it without paying the local tax or if its from the US how not to pay the canadian tax (if any) when entering the country (custums taxes?) or any other suggestion for the cheapest price with the best things :))

I have questions about accesories mostly, because all i have is there name and i d like to get feedback from people who have them or who have pictures of them etc any information is useful! :-)

First of all, what is the VX-5R comming with? i heard it was charger/ battery/ antenna/ clip...Is that all? the charger is the radio right? or is it an external one? and does it comes with a DC cable?

Accesories:

What are the NC-72B(18$US?) (Charger for Lithium-Ion battery & Rx AC adapter) and CD-15(29$US?) (Rapid charger for use with NC-72B charger) for? Or more exactly how do they fit together? are they really useful together? and the NC-72B alone? How long for a full charge? (considering i heard the radio was taking 4.5hours) and what is the E-DC-6(7$US) (DC power cable; plug, wire and fuses only) cable for? doesnt that comes with the radio?

E-DC-5B(26$US) (DC cable with voltage regulator and cigarette lighter plug) is a good choice?

FNB-58LI(69$US) (Lithium-Ion battery 7.2v @1100mah) is there a better battery than that? is buying a second battery that useful (Read: will the first one die within a year or 2?) and if i buy a 2nd one is the above charger + quick charger add on needed?

FBA-23(25$US) (Case for 2 AA alkaline battery) What is the Tx power when i transmit with this? is there a better AA case? 4 or 6 batterys?

CN-3(8$US) (SMA to BNC adapter) self explanatory but im including it anyway for others who are looking for accesories :)

CT-44(12$US) (Converts to 2 pin microphone connections) Ok, what is this? is it only a one hole plug like the small sound plug used on Soundblaster/radio etc? or else, are there any earphone/mic like the MH-34B4B(30$US) (Compact speaker microphone) or the MH-37A4B(30$US) (Compact lapel mic with earphone) that also have a normal sound plug(so i can plug the radio into my soundblaster)? How do these or other earphone/mic performs? any suggestion for a small earphone/mic on the shirt with a normal sound plug that works with a VX-5R ?

SU-1(35$US) (Barometric pressure sensor for pressure and altitude) Is that really accurate(how accurate in pressure and in altitude?)? is it worth it? does it use a lot more batterys? Is it conflicting with radio hardware or software modification? how does it plug to the radio?

CSC-73($19US)(Case for the VX-5 radio) is that case worth that much money? shoudnt i just make my own? :)

VC-25(62$US) (Lightweight VOX headset) what is this exactly? the same as the earphone/mic but for home use? (big headset?)

Computer DB9 cable...here i have a bigger problem...i dont want the cloning software i ll just enter things by hand but i d like to be able to modify the radio with the software mods...is there a place where i can only buy the cable at a much more reasonable price? (http://www.icongrp.com/~sllewd/pcware.htm this is a shematic i found i think its the same for the VX-1 VX-5 IC-Q7 and more)

Users: what are your impressions? how much can you transmit before the battery dies? etc? :-)

THANKS A LOT in advance for all the answers, it ll probably help other choose their accessories =)

Alexandre

I also have the matching Kenwood speaker (SP31) $ 50.00
and the matching Kenwood HD Power Supply (PS52) $ 175.00
Both are in perfect condition.
I can make someone a great price on a package deal !!!

I have for sale a YAESU FT 736.
vhf / uhf all-mode base station.
stock bands are 2meters+ 70cm. also has 6 meters and 1.25 meters.
plus the FVS-1/1a Voice Synthesizer , CW keyer, and the FTS-8 CTCSS Module.

on a scale from 1 to 10 this rig is a 8.
it has very light scratches on it, a a tiny tiny ding in the tuning knob.
i bought it this way. the radio has been to yaesu for a Dust and clean.
and the IF circuit replaced. i bought it broken and had it fixed.
it is 100% working condition and is looking for a good home.

First $1500 gets it shipped free. no trades i need the cash.

please reply to churchrr@home.com

Hi all!

Anyone try to compare tranceivers IC-746, IC-706MKII(G), IC-821H, FT-847 or
others as base VHF equipment for low signal QSO (tropo, MS, EME)? Which one
is the most suitable for that? Any short (or long, hi) comments are welcome.
Looking for VHF TRX to buy it but can't make choice.
May be anybody has any recommendation about transverter to existent IC-756
with narrow CW filters. Any information will be appreciated.

Just recieved my Yaesu VX-5R the other day. The battery "under normal use" will survive 300 cycles of charging-discharging. Nothing mentioned about "draining" the cell dead before charging, but after charging is complete (The display tells you, and the TX-RX LED glows green <cool feature>), the HT should be unplugged from the charger, and allowed to cool down before use.

The VX-5R is an AWESOME little marvel of an HT, easy to use, great manual, sounds good, powerful, and LONG battery life. And I am/was an Icom freak :-)

Well, Christmas this year was good to me and I was able to get that HF rig I wanted, along with a tuner and a power supply. It seems I'm all set to go, except for one thing: I see that both the radio and the tuner have GND screws for connecting them to a ground source, I suppose it must be to get rid of unwanted RF and currents.

My equipment is located on a second floor, and the nearest point where I can bring in a ground cable is about 10-12 feet from the ground, so between the equipment and the copper rod there'll be at least a 10 feet of wire. Will grounding still be efficient under these conditions? What caliber wire should I use to maximize ground efficiency? Any other grounding strategies which might work better than the one I have planned?

Wire will provide a DC ground, but may not provide an adequate RF ground due to skin effect, especially on the higher bands like 10 meters. I use copper strap about 2 or 3 inches wide and have had pretty good luck with it. Of course, the second floor location complicates things because of the length of the run. As a start use whatever you have available and see if it is satisfactory. Be sure and use a single point ground configuration to avoid ground loops between the tuner and the rig. You might try grounding only the tuner and then allowing the coax from the rig to the tuner to be its ground path. Of course, all of this supposes that you are using an antenna the requires the use of the tuner to begin with. There are no black and white answers, each system is different and the band can also affect the result. Experiment with it and see what works best.

I have a VX-5r and tried to use it while plugged into AC. It's a no-no. The radio will shut off. Then, I read the manual and it says +ACI-AC RX only+ACI- I haven't contacted Yaesu yet to find out why.

Using the DC adapter, RX and TX both work.

You will get a lot of different opinions, but this does not sound too
dificult a situation.   There are some exotic RF ground tuners and such to
help out with problems, but first just try a 6 or 8 gauge solid copper wire
run to a 8 deep foot copper clad ground rod.  That should get your on the
air safely.  If you don't get any rf bites, probably from the tuner if it
does happen, then all is well.  If you do, then write back for more info.

it might have something to do with the fact it wasn't designed for it too low an amperage for one....remember the vx-1r only put out 1 watt max the vx-5r puts out 5 so they never planned on a charger to be used as a power supply.

I have a Mint condition VX-1R w/ ADMS software & interface cable, battery, charger & antenna. I will sell for $225.

RLC Electronics COAXIAL Switch, model # s-2826
15VDC operation, N connector outputs and 1 input - $20 obo

1 - SEEKA GR40 12-24VDC input, photo/color sensor unit, very small and unused, Dark/light sens adjust - great for monitoring
object, etc - $40

1 - OMROM, NEW, H5L-A Time switch, 2 relay contacts, time set, large LCD control window, 100-220Vac supply, perfect
condition, never used, mounted in NEMA enclosure, asking $75 obo

1 - RS232 A/B printer/peripheral switch - $10

1 - Magitroni P/N I-E16-COMBO Ethernet card, BNC/RG connectors, used - $10

1 - Artsoft Ethernet Adapter, BNC/DB15 connectors - used - $10.00

1 - Moose Products Inc, High Powered 12Vdc, yelp/stdy Siren Module Board, 4 ohm min output for horn, works fine, real
loud, -
$10.00

1 - 12VDC operated UHF remote control switch receiver/Mini transmitter set, works fine, relay output (w/ relay),

transmitter
uses 12V battery, included, used but functions perfectly - $20 (pair)

Intermec (altered) Barcode Laser Scannerdevice(diode Laser) does not read, but scans fine(5V input) scans nice 670nm line
when hooked up to 5-6VDC, neat toy. - $20.00
Model # 1545

1 - B Eagle Electronics Automobile shock sensor unit, 12VDC operation with sens pot - $10

1 - DE 1506 sound automobile sensor, 12V with MIC & sens adjust $10 obo

1 - LXI series(sears) Portable 12V VCR, works fine, with all cable connections from base unit. LCD readout, no charger,takes
lead acid batteries(like from old MOTO phones - $50 obo

Uniden/Bearcat Desk model # INF5XL scanner, preprogrammed by state type, with whip antenna, no power supply, tested fine
with
mine. Buttons for POLICE, FIRE, MEDICAL, STATE, WEATHER, DELETE & HOLD, PLUS SQUELCH/VOL. Best offer takes this off my
hands..

PRO-34 (cat # 20-139/9135) SERVICE MANUAL ONLY - $10.00

VIDEO STUFF

Casio HH calculator(scientific) # RM-7400G (icon Menu) with comp link & OHP(over head projector) unit, Calc talks to OHD via
IRDA(Infrered) signals, great for presentations/classroom. OHP also made by CASIO has some type of PCMCIA port on side
aswell, no docs, but both work fine. $100 pair

1 - Color CMOS Egg shaped CCD camera, adjustable focus, 12VDC input/NTSC video output via RCA jack - $75.00

1 - Commodore Model 1702 COLOR video monitor - $40.00

E-mail me at:

Tech America is a division of Tandy Corp., so if you like RatShack quality, you will probably like TA quality.

I recently purchased this HT and I'm having trouble with the squelch. When I turn the radio on, the static on the channel will sound. I then turn the squelch up until the static goes away (almost all the way up) and then if I turn the squelch back down, the static doesn't come back even with the squelch off. If I transmit with

another HT right next to it, it still won't recieve. The signal meter
will go up, but no sound. I have checked the battery (7.8 V out of
7.2) and the DTMF squelch is off. The guy I bought it from says it
was working fine when he had it and it was packed well for shipping.
Am I missing something simple here? Any help appriciated.

I got mine at HRO, I don't know about Canada, or the accessories you mention, but it does come with a belt clip, antenna, (ant. extender), schematics, and a wall wart to charge the Li batt. which plugs in to the base of the radio.

The battery seems to last forever, I haven't had to charge it after the initial charge. The case is rugged metal, the keys are tiny, and the manual and unit are very complicated.

Even without the optional barometric pressure unit, you can have the unit display the temp when powered off.

Hi Joshua,
I also have a HTX202 and I find that the radio is very sensitive on the receive side. I also have an HTX404 and when I xmit on that radio, my HTX202 sometimes comes on with static so I have to give it alittle more squelch.
From the sounds of it Joshua, you may have to pay a visit to a repair shop.

Good luck
Rob

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's   Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders   Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

Dr OM/YL

This mail to inform You that the latest edition
of the OZ50MHz DX Bulletin #99-005 is now uploaded
at my homepage, at the adress;

http://www.qsl.net/oz6om/

Due to breakdown on the QSL.NET server, wich have
delayed the release, hve the bulletin been released
Sunday instead of Saturday.

Do not expect to see a weekly mail like this ! - by
now You should have caught the rutine - so please
have in mind that the OZ50MHz DX Bulletin normaly
is uploaded late Saturday evening (UT time)

vy 73 de OZ6OM "Matt"

Does the FCC license a repeater for a particular freq? Do they 'allocate' that freq to that one repeater for the area it serves?

As in.. What gives a group the right to 'control' that freq for their private use when the repeater's closed?

97.205(c) & 97.205(e)

The rules recognize coordinated repeaters in case of harmful interference caused by an uncoordinated repeater. They also allow the use of a repeater to restricted to specific users.

The operator of a closed repeater does not have "control" over a frequency. But since repeaters can't generally move to another frequency, it is considered good amateur practice not to interfere with one with non-repeater operations.

It is also good amateur practice for repeater owners to cooperate in the coordination process whether open or closed. There is really no reason for people to hog channels and then bitch and scream when someone else wants to come up on the same channel in an nearby community - provided users all cooperate.

RA1792 with full complement of filters complete with manual. I have two and I need to sell one (toupgrade my computer), both are in immaculate condition. �750.00 buyer collects in the UK. If a US buyer wants it then I do not wish to ship unless it is FEDEX with about �120 shipping on top as I am in the UK. I have a US buyer of a previosu RA1792 who can act as middleman if required.

I am an ex. Racal Radio Engineer so I know the RX well.
I have replaced the displays (the early ones tended to fail about now)
Fully aligned the Rx (not that they need much). Both more than meet original specs.

Specs as follows:

Filters:

16, 6, 3, 1, and 0.3 kHz CW/AM/FM 2.7Khz usb/lsb no isb

OR

2.0, 1.6, 1.0, 0.3, and 0.1Khz CW/AM/FM 2.7Khz usb - no lsb enabled on EPROM or isb fitted. This is a great data/usb/CW radio

E-mail me back at mike.b.gibson@btinternet.com or phone me on 01494 816342

This is the US version of the RA1792 and a rather smarter version at that.
Tha RA6790 tests its filters to see what is installed and reports
accordingly.
The RA6790 is fully RS232 controllable from the PC.
This version complete with manual and full complement of filters including
2.7Khz USB/LSB
The unit has lit LCD's and has front panel selectable tuning rates (unlike
the RA1792).
I need the money to finish paying for this PC and I do not really want to
sell but such is life!
I will throw in my copy of Visual Radio which can be used to control the Rx
from Windows. A newer version is available from CGT Radio services, I have
the web page ref. somewhere.

Immaculate condition �900-00 NO OFFERS for this fantastic deal. If you are
genuinely interested then mail me on mike.b.gibson@btinternet.com or phone
on 01494816342. Please only phone if you are interested in buying although I
am an ex.Racal Radio Engineer I am not here to solve all the Racal euipment
problems in the world.

regards

I have an RCA Series 700 UHF repeater. I
am looking for a a service, shop manual for it.
I need information for tuning up the RX/TX sections

and basic controller wiring (RX/TX audio, PTT and
REC COR) tap off points, for my external (CAT 300)
controller.

If you have such a manual for sale, or could copy
the appropriate sections and mail or fax them to me, I
would gladly pay for these services.

Thanks;

Hi,

I've recently bought a house that has an alarm system installed. The alarm sensors and control panel communicate with one another with a wireless signal (319.5 MHz).

Question: Has anyone here had any trouble with interference between a home alarm and their ham rig? I don't want the alarm system to make reception

difficult on the ham bands, and I don't want my rig setting off or
disactivating the alarm.

Anyone had any experience with this?

Alan D. Bulley

I have an extensive home alarm system which utilizes both hard wired as well
as wireless sensors to communicate with the "brain" or control computer. The

alarm was installed by Westec Security, and I don't recall the model number, but it is the best unit that they offer.

I have operated most HF bands and modes (except 160) with both the rig only at 100 watts, as well as with an Ameritron 811H at around 800 watts. This is fed to either a Cushcraft A-3S at 65 feet, or a home made dipole at about 50 feet. So far, I have had no problems with the alarm interfering with the rig or visa versa.

I also operate all mode 2 meter and 440 with 200 watts on 2 meters and around 90 watts on 440, fed to 13 element yagi's. Likewise I have had no problems concerning the alarm system. Now if I could only say the same for the cordless phones... :>).

You need to rephrase the question slightly. Shortwave implies a band of frequencys for example 2-30MHz. SSB or Single Side Band is a modulation type, in other words, the way the signal is transmitted. AM Broadcast stations use a carrier and when mixed with audio you get an amplitude modulated signal. For efficiency an SSB signal removes the carrier but the the reciever artificially reinserts it so you can detect the audio.

This is a very simplistic explanation. So to answer your question (I
think) SSB could be used on ANY frequency shortwave, longwave, microwave
as well as AM, FM or any other modulation type
SSB has nothing to do with shortwave or in other words the frequency
that it is transmitted on.
Sorry that's the best I could do. :)

I am very confused.

Which is the most practical shortwave or single side band?

What exactly are the differences?

Introduction to Ham Radio

Local amateur radio operators are eager to increase their ranks, so they make it easy for newcomers. Only a few key attributes are necessary, say members of Dallas-area amateur radio groups.

Hams must have licenses to operate legally under federal law. The Federal Communications Commission offers six licenses. The more privileges a license grants, the more a potential ham must know to earn it. Some require fluency in Morse code.

There are more than a dozen amateur radio clubs in Dallas-Fort Worth. All welcome visitors.

The national American Radio Relay League, based in Newington, Conn., maintains a comprehensive Web site at www.arrl.org.

"It's really very easy," said Blake Lewis, a director of the Dallas Amateur Radio Club. "Connect up with a local club. Come to a meeting. Get to know some people."

Hams say the best people to connect with are Elmers. "Elmer" is ham radiospeak for mentor. Elmering is mentoring.

"An Elmer will help you avoid common mistakes," said Keith Pugh of the Lockheed Amateur Radio Club.

Common mistakes include getting the wrong type of license and buying the wrong type of equipment.

Hams say that the key to avoid both is to know to what you want to do as a amateur radio operator. Do you want to talk with your buddy across town or with a strange in Austria? Are you interested in satellites? Microwaves? Amateur TV?

Do your research. Then study for your license. The American Radio Relay League publishes study guides. Many clubs offer study sessions, and most have at least one person who can administer the test. Once you have a license, it's time to buy a radio.

"Keep it sufficiently simple so you're not overwhelmed," Mr. Lewis said. "Some of the newer radios have 60 or 70 features operated by only 12 controls. That can be confusing."

Older models --often available used-- can be a good option for the novice.

To buy a radio for short distances --UHF and VHF-- allow $150 to $400 for used or $300 to $600 for new. For high-frequency radios to talk worldwide, allow $300 to $600 for a used machine. New high-frequency radios start at about $600 and can exceed $3,000.

Good sources for used equipment are the swap meets hosted by many clubs. Check with individual clubs for times.

While it is no longer feasible to build a radio from scratch, antennas are another matter. The simplest kind can be made from coat hangers.

Two months ago --after nine years as a ham-- the Dallas Amateur Radio Club's Mr. Lewis bought his first antenna. Before that, he made his own.

Those intended in packet radio --transmitting data form one computer to another via radio waves-- will also need a computer and a terminal node controller. A controller works in a fashion similar to a modem on a personal computer.

As with radios, the cost of a terminal node controller varies depending on the number of features and whether it is new or used. Prices for new controllers can range from as little as $140 to more than $900.

As for the computer, don't go looking for a Pentium class. In most cases, a 386 will suffice. those are often available for less than $100.

More information about ham radio can be found by contracting the library, the FCC, the Internet or amateur radio clubs.

"Learn your basics. Know what you're looking for. And you'll have a good time," said Mr. Pugh of the Lockheed club. So find an Elmer, and get after that wascally wadio.

I understand the United States military is "phasing out" its
"outdated" morse code. Advanced communication technology is
bringing different options, and users are discarding the old
ways to incorporate the new. [Unfortunately, I do not have any
examples to present at this moment.]

I have two Kenwood TM-V7 mobiles and quite like them. I am a licensed MARS operator and have perfomed the modifications to them both. When I did, I noticed that I could no longer transmit stored DTMF numbers, nor could I operate the unit remotely using an HT via DTMF commands. Has anyone else had the same problem?

You need only 15 mins. of practice per day. Concentrate on the whole character and stop trying to count dots. If you have to slow down, slow down. also practice your sending with a straight key or elec. if you prefer. I really isn't difficult to learn, the hard part is learning to concentrate.

I went from 5 to 20 wpm in a 2 weeks with just 15 min. per day.

let me know how its going.

I'm looking for the best "value" in a simple and rugged yet effective 144 / 440 rig to move between my vehicles.

I don't need fancy stuff like detachable faceplates.

Small, solid and inexpensive is better.

Any suggestions?

I am looking for a circuit of a simple frequency counter, for amateur radio use, which is capable of measuring frequencies of, say, 1 to 30 MHz, from a vfo or local oscillator. The circuit should preferably be as inexpensive and simple as possible, perhaps using 74 series TTL logic ic's. I have plenty of 4MHz crystals, so I would rather use one of these for the reference oscillator rather then specially buying one. Although I have experience making simple transistor circuits and pcb's, I am not so familiar with logic circuits, and am unsure of how to go about designing my own circuit, hence my request.

BD,

I just had this discussion with my code buddy. He was having the exact same problem, so I'll share my same thoughts with you. Learning numbers in Morse Code is the same as learning the letters. They must be learned as whole sounds. Six, for instance DAHdidididit doesn't sound anything like Two, DidiDAHDAHDAH. One of the best ways to learn to instantly recognize these letters (and they are just letters) is to practice for instant recognition starting with two letters at about 5-8 wpm. Once you can recognize them instantly at 90%, then add a letter. Increase your speed about 2 wpm at a time as you begin to feel confident (which means 90% recognition at speed). Learn the numbers in this order 0 5 9 3 8 4 2 7 1 6. How long it takes will depend on you. But shouldn't take any longer than a week (if you practice 30 minutes a day split into two 15 minute sessions). I know it sounds weird, but it works. The other method that will work is get into a slow traffic handling net (like MSN maryland Slow Net at 3717 daily, at 730pm EST.) They will train you to handle traffic AND get your speed up. Traffic handlers work with numbers ALL the time, so you will get a lot of of practice copying them. Good luck BD, and Arf (bark of the traffic hound)

I have the following 2 scanners for sale

1 - Uniden Bearcat SC150 800MHz scanner, twin turbo, used but in good shape. 100

channels, no modifications done. Unit has a date code of 'OFIG' first $105 takes it

1 - RS Pro-2039 Base scanner. Very small and in great shape. 200 channel, 800MHz

HYPERSCAN. Broken screw in top mount antenna , but functions fine and has optional BNC antenna connector on back. Unit is 120VAC ready with cord. Asking $125 obo

I have a number of mint condition Black & White CCD cameras. Follow the below link toview . They are very small encased C-mount cameras(I have some lenses for sale as well) They were purchased new for $249 each. I
will sell for $150 each, or can work out a deal for qty. Let me know if interested

Has anyone sucessfully added an amateur radio to their 93 era Corolla?
I took a 2-meter handie-talkie inside to listen to the local bands,
unfortnately it is downright useless when I have the car radio on.
Also, I've noticed the new cars do not have room to mount gear in the
dash as they did in years gone by.

Hello Charles, being a ham myself, here is what I did, I mounted my 2
```

meter rig on a cell phone pedistal with an adjustable base, I can remove it, swing it about etc. I have mine at the back of the console pointing up to me, the driver. As for having the car radio on, I havent had any trouble with mine (89 Truck, now its in my 98 Tacoma), I have a Larsen NMO-150 antenna (5/8 wave) mounted in the center of a diamond plated toolbox, for a good central location without having to drill holes in the body. I do get a small amout of static on it, HF would probably real noisy. I will add a "cap" across the fuel pump and the alternator output. 73 from:

Get a keyer and try to send them. Whiterook makes a nice keyer for about $50 that is designed for backpacking. It fits in your pocket so you can practice anywhere. trying to send h,s,5 will give you a big kickstart. Also, you can just ignore it and use context to diferentiate.

>>with more than 3 dots 'in a row' all sound the same to me!!!
>>I can NOT tell the difference between S, H, or 5 (I'm stuck on those, so
>the...

use Ham U's morse exercises thing instead of the morse lessons for a while. fill in the edit box with a whole mess of S's, H's, and 5's, along with whatever other characters to throw yourself off a little. i had a similar problem with Q, Y, L, and X, and this helped. Practice as much as possible, but don't get frustrated. i usually can go only 15 min. or so before i start getting bad copy. take a break for some freecell or minesweeper or whatever,

then get back to the morse. i usually total about an hour a day.
  nearly all the numbers sound like a letter at higher speeds (1=J, 4=V, 5=H, 6=B, etc.), so you may still have to rely on context of the message, but hamU sends random characters :(once you know them all, do some QSO's and you'll know that character was supposed to be an S rather than a 5.

best of luck!

Try and get my program at
http://www.qsl.net/oz1kto/

Here you can define exactly what characters you want to receive. I'm using it myself. I don't have problems
with I-S-H, but for some reason, every time I receive a W, I have to stop and think, I don't know why some
characters are so hard to recognize.

Stop counting the dots and just listen to the music. Each character has a definate rythm which can be recognised in the same way as the intro to very "Beatles" record, for instance. Just practice listening and it will come. I do not know about other operators but I have found that I no-longer need to listen to individual characters most of the time in 'rubber-stamp' QSOs. For example when I hear "-..---." I write "name".

Get an experienced operator to record for you several phrases, such as "is this the shit?", then listen to them over and over and over again whilst saying out loud the characters. The odd error (with exactly 8 dits) could occasionally be included. Speed should be rather fast, but with a slightly exagerated space between each charcter. It is only a case of forming a mental association between the letter (or word) and the sound. The funnier are the test sentences, the faster it works.

Have fun from Harry - SM0VPO

The original poster wasn't very specific, but I expect his complaint is that the offending individual REFUSED the COD, thus the charges bounced back to the sender.

Hello.
I need informations about building a NOAA satellite 137 MHz antenna (For
instance "Turnstyle").
I am currently designing a special receiver for a project in university.

Please give me details about the construction (schematics and
measurements welcome !!)

(Sorry if my English is not perfect, but ... I am French.).

You can either mail me at: ----->scan7705@my-dejanews.com
or:
----->fan_de_piercings@hotmail.com

Please DO NOT reply in the newsgroups please, because I will not be
able to read messages, unless on saturday or sunday, at home ....

MANY THANKS IN ADVANCE . . .

Sorry my friend, I can't help you with your antenna. But as far as your grammer and choice of word's, are more literate than a great many american's. So much for our education system.....but anyway that's a different subject. Good luck in your search.

Hi folks :) I'm an electronic musician *seriously* looking for the following
musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS   (from the 60's-80's)
-OLD KEYBOARDS   (w/ knobs or sliders)
-OLD DRUM MACHINES
-OLD SEQUENCERs   (w/ knobs for each step)
-OLD VOCODERs   ("robot-voice" sound)
-MODULAR PATCHABLE SYNTHESIZERs
-RACK SYNTHS
-INTERESTING EFFECTS and anything related to the above.

http://members.aol.com/rolandman1/index2.html

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML,
Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion,
Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline
-Roland TR-909 Drum Machine
-Roland TR-808 Drum Machine

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer
-Pearl SY-1 Syncussion
-E-mu SP-1200 Sampler Drum Machine
-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

Hello,
I am considering the purchase of a IC-2710 with the MB-65 and MB-58 options.
How tall of a mount is the MB-65? Is it comparible to a standard cell-phone
cradle mount? I'm wondering if it's tall enough to be easily viewed when
mounted on the center hump of my dodge pickup. Any information / suggestions
will be greatly appreciated. Please respond directly to
peaster@connors.cc.ok.us.

Thanks & 73's
Mike Peaster

Geesh guys, I hope this doesn't sound too demeaning to us hams as
technocrats but here is my answer;
The cost of a used HT amp right here on the newsgroups is around $50. By the
time you purchased a 10dB transistor, new mounting hardware and insulator,
heat sink, resistors, fixed and compression trimmers, a bit of coil winding
wire, relays, a couple diodes, switching transistor, and a relay, you would
exceed this amount, 'unless you had an excellently stocked junque box. . .

if that is the case do a search on MRF transistor amplifiers and in about an
hour you will have a schematic and PC etching template. Motorola has
application notes for power transistors. You could also check the ARRL
manuals at the library.
73 and email me direct if you do take this on and get in a bind,
Art   k9xf

VIRUS WARNING!!!!!!!!!!!!!!!

If you receive an email titled "IT TAKES GUTS TO SAY JESUS" DO NOT open it. It will erase everything on your hard drive.

FORWARD this letter to everyone that you know!!! Lets stop it NOW!!! This a new, very malicious virus and not many people know about it. This information was announced Sat, Mar 6, 1999 in the morning by IBM. Please sare this with everyone that you know on the net. Also, don't look at or read any mail that says "RETURNED OR UNABLE TO DELIVER" This virus will attach itself to your computer components and render them useless!! Immediately delete any mail items that say this. AOL has said that this is very Dangerous virus and that there is NO remedy for it at this time. Please practice cautionary measures and forward this to all your online friends ASAP!!!

Hello Dan
Read your post and and some of the answers. As you are discovering, most of the ham population is old, but we are not all crotchety. Congratulations on getting your general at 14 years old. I was still swl'ing at 14. If you give us some idea of what you are wanting to do, I am sure you will get a few more specific answers. You probably can pick up something at swapmeet at a better price then buying new parts. That is one of the disadvantages of being a new ham--you do not have a garage full of "junk" that you have accumulated over the years that can be used for projects. Why not sidle up to one of the old timers with a known junkbox in the Tristate club and tell him what you would like to build. Ask him for some ideas--if you are lucky

```
you might just strike a goldmine in parts and advice at the same time. Cross
posting to so many groups is usually not productive.

Hello, the ICOM 706 Discussion Group is continuing to do extremely well. Being this is such a great mobile HF rig, I have decided to giveaway a HamStick mobile antenna each month to those that register for the free drawing each month.

Folks, Amateur Radio is a fantastic hobby. Mobile operations is getting better everyday!. Let's all get talking mobile.

Come by http://vartel.com/icom706 and see what all the fuss is about with the ICOM 706.

See ya there!

IT TAKES GUTS TO SAY JESUS is a hoax that has been out there for several
months. To check out this and many other net hoaxes go to:
http://urbanlegends.miningco.com

Remember, no legitimate warning tells to you to pass it on to everyone you
know.

Charles

Thank you!! Our education system is not that bad, but I DO think that
intensive practice of a foreign language helps a lot.
As far as I am concerned, I use computers since I am 11, and I am now 22.
The use of computers implies a good level of vocabulary.
Later I discovered the Internet.
Of course it helps to browse many web pages in english.
Last but not least, the HF bands are a very powerful tool, I mean you can
listen to radios broadcasting, amateur QSOs!!
(I just realized it would be cool to learn Morse code...) :)

Try WorldRadio magazine or QST to start. If there were a good list
posted on the web I would like to see too. BTW, there are couple of
good ones coming up here in the Midwest soon. There is one March 5, 6,
& 7th at the ARRL Nebraska State convention in Norfolk, Nebraska at
Northeast Community College. For more info try

Don't worry about your HT. Just because it was programmed with a computer, doesn't mean it's gonna turn kazinsky stylez on new years.. ;)

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

```
- OLD SYNTHESIZERS                 (from the 60's-80's)
- OLD KEYBOARDS                    (w/ knobs or sliders)
- OLD DRUM MACHINES
- OLD SEQUENCERs                   (w/ knobs for each step)
- OLD VOCODERs                     ("robot-voice" sound)
- MODULAR PATCHABLE SYNTHESIZERs
- RACK SYNTHS
- INTERESTING EFFECTS and anything related to the above.
```

Moog
ARP
Korg
Roland
Sequential Circuits
Oberheim
Yamaha
EML
Electrocomp
EMS
Synthi
Putney (VCS3)
RSF
Buchla
Serge
Polyfusion
Ionic
Paia
SMS
Wavemaker
E-mu
Steiner-Parker
Chroma
Aries
ANYTHING SIMILAR!

- Roland TB-303 Bassline
- Roland TR-909 Drum Machine
- Roland TR-808 Drum Machine
- Simmons SDS7
- Simmons SDSV

```
- Pearl SY-1 Syncussion
- E-mu SP-1200 Sampler Drum Machine
- Sequential Prophet VS rack
- Oberheim Expander
- ARP synthesizer model 2600
- Korg MS-20
- Korg synthesizer model ms-50
- Buchla Electric Music Box
- Buchla Music Easel
- Oxford Oscar w/ MIDI
- Sequential Circuits Pro-One
- Multimoog

Also looking for old literature on electronic music and synth equipment...

If you have any of the above OR SIMILAR for sale or know someone who might,
please email me at rolandman1@aol.com and include phone number as well if
you'd like.

Thanks in advance and apologies if this post annoys anyone.

If done with a home computer do not worry about it. There will be no effect from Y2K problem. Also do not worry about your home system they will not be affected either.

You know I heard that if use an HT after year 2000 that the air pressure around the antenna will decrease so rapidly that a vortex will form around the HT and the user would be sucked up into the sky and Chicken Little will run around saying the sky is falling the sky is falling.

Please do not take this personal but I think this Y2K thing is totaly blown out of scale. The media is to blame for creating this scare. I feel that your concerns are legitimate but how does your HT know what time it is? How does your VCR, or your TV, microwave, toaster, coffe maker know what time or century it is in. If it is programmable you simply change the date to one that works. There is more concern for the social infrastructure that depends on accurate dates ie) banks, food chains, air-ports, train stations etc. I mean I would be more concerned that I had power to my house on January 1, 2000 than if my HT is going to work. January 1, 2000 will be just like any other day of the year, the sun will rise and it will set. What goes on in the middle happens to humans not the planet. Of course these are my opinions and the doom-sayers are free to disagree.

Chicken Little

I am studying now to pass my Tech No code license.   I am looking for some low cost rig to get me on the air after I pass. I would love to get into Packet etc as well..

I have checked out some of the new ones, I unfortunately will not have that kinda money to spend on this hobby.

If anyone has any kits that they would recomend that might be lower cost? Or any other lower cost solutions, please e-mail me.

The key term here is low cost.

Thanks
Kevin

Hang around with the local Hams in your area, show up at meetings, and let it be known that you are looking for a really inexpensive USED radio. Volunteer for antenna parties, tower installations, and so on. A new Ham who is ready, willing and able to participate is always appreciated, and in those cases Hams have a tendency to take care of their own. (You)

Remember that it is the older, more experienced Hams who will be in a position to help you out, and by odd coincidence those same Hams could use something special you have to offer. (Strong back, weak mind)

Chances are you'll get a lot more for your money with this approach. - You might even luck into a "freebee". - And in the meantime you'll learn a lot and get to know some great Hams, which in the long run is much more valuable than a used radio. You can't lose on a deal like that, if you put in a sincere effort.

Good luck!

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB

ARRL APPROVED LONG ISLAND HAMFEST - MARCH 7, 1999

On March 7, 1999 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest. The location will be at the:

Knights of Columbus
400 South Broadway
Lindenhurst, Long Island, NY

There will be radio equipment, electronic componets, computers and accessories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes. General admission is $6.00.
Free Admission for spouses and children under 12.

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1999 ARRL/VEC fee is $ 6.45, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Peter Portanova WB2OQQ at(516)541-4886. Email info@gsbarc.org

Talk-in will be via W2GSB Repeater on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

I have a Kenwood TS-530S and a Kenwood SM-220 with the BS-5 unit, I need info on connecting the SM-220 to the TS-530S IF Output. I have a manual for the SM-220 , The manual does not say where to locate the IF output in the TS-530. Has any one used a Kenwood TS-530S and a SM-220?

Thanks De Eddie W5WBB

The ONLY way the year 2000 could cause a problem with your radio is
if it had a real time clock in it and knew the date and time.

Assume that there was such a radio with a Y2K bug, why not lie to the radio and set its real time clock to the year 1972 or any other year?

Hi, i just bought a vx-5r and i d like to know what do i need to use it to
communicate by modem with someone? (cheap hardware...could i use a sound
modem in linux? if so how does it key the PTT on and off? a special
cable?)

also how do i communicate with satellite at 5Watts? is there a special antenna for that?

Any suggestion for having more fun with this radio is appreciated thanks :)

ok my english vocabulary surrounding ham radio isnt very good...what is a ground plane antenna? how does it look like?

> You can work AO-27 with the rig with just a simple whip antenna. I use my
> FT50 and a MFJ-1715S to work the bird almost daily. The Arrow antenna will
> work much better, but it costs a bit more than the whip. The price of the
> Arrow is not very expensive and you'll have an excellent antenna!

same here (:) what is an arrow antenna? the whip antenna is a metal antena like on most car? :) (ill have to learn my ham-vocabulary soon =)

i wont do packet on the road but i ll probably try to do sats though...(while walking i dont have a car :)

this is pretty new stuff to me, at what altitude are those sats? can you be multiple people on 1 sat using ctcss tones?(or dcs) and are there packet sats? how does it work? hehe :) (i m too much curious :)

also, if i try to build an atenna myself how do i calculate its impedance? (is that the right word in english ?:/)

thanks a lot!

alex

Article was clearly marked FA and Ebay. The items are radio related.
It would have been easy to ignore it.

Not the Spam I am used to, unless the flavor has changed since I checked.

Well... for Mir a simple ground plane antenna is all the is needed. It's quite easy to work with a ground plane, I do it mobile from a patrol car with a mag mount antenna and at home with a homebrew J-pole.

> Any suggestion for having more fun with this radio is appreciated thanks :)

You can work AO-27 with the rig with just a simple whip antenna. I use my FT50 and a MFJ-1715S to work the bird almost daily. The Arrow antenna will work much better, but it costs a bit more than the whip. The price of the Arrow is not very expensive and you'll have an excellent antenna!

How can you even define it as being a teaser? They post the FA in their subject heading. That is NOT a teaser. A teaser would be if they didn't put FA in the subject!

FYI, I learned about eBay from those FA postings and did buy some equipment someone was selling. I have been a buyer and seller on eBay ever since. I have made a lot of money and people have made money from me because of their postings on the newsgroup. I have posted my ads in the newsgroups and attracted buyers because I did so.

This is such a petty subject to bitch about, I know, but I deal with stupid people all summer at work, and the last place I would expect to find stupid people is in an Amateur Radio newsgroup! Come on, people, we're supposed to be the more intelligent group in society. Ok, so the HF bands prove this wrong also.

There haven't been that many ebay teasers posted on this newsgroup yet,
but it has seemed to increase somewhat lately. There are some newsgroups
where the ebay hawkers have just about destroyed the groups as far as
discussion because of their constant postings of these teasers. As more
and more ebayers discover that they might make an extra buck by posting
these notices, the number of teasers will increase and they pay no
attention to if the charter of the groups allows FS and FA ads or not.
When it comes to making a buck, nothing will stand in some people's way.

And did you even check the charter of the newsgroups to see if FS and FA
ads are even allowed before posting your teaser? Probably not, and you
are probably the type that would not even care, you just want to do what
you want with total disregard to others.

No, I did not. One can naturally assume that it was allowed considering the number of messages that were posted in this fashion.

Explain this to me: What is the big deal about FA and FS anyways? You obviously don't have anything better to bitch about, but I'm sure you have a GOOD reason. Unless you can give me a GOOD reason why FA messages just aren't compatible in a newsgroup, I will assume that you just feel you need to have control over people or something like that.

One other thing, my messages FA and FS messages were only posted in the
.swap groups.

Since when did rec.radio.cb and rec.radio.amateur become swap groups? Do
you see swap in the name?

I guess if you see eveyone else jumping off a cliff then you would too?
Just because you see others posting ads to a group dosen't mean it is
OK. They are being just as dumb as you are.

The bid deal is, if the charter dosen't allow for ads, then you should be willing to abide by the charter or go somewhere else. But I guess you are the type that thinks those kind of rules only appliy to others, if it serves your purpose to post ads then it is OK.

I am happy to say that the Icom 706, 746, and 756 discussion groups are doing well. This all started with the Icom 706 group. The 706 group was a great success and users ask about a 746 and 756 users group. So, I put one on-line for all to use.

If you have a need for one of these groups I invite you to stop by and take a look. There is a great deal of useful conversation taking place on these sites.

http://vartel.com/icom706
http://vartel.com/icom746
http://vartel.com/icom756

Also there is the Tradersnet which is doing fair. I would like to see more traffic there so please visit that site as well.

Neebie question

I am buying my first mobile and am choosing between these three.
Which radio would you pick and why?

ICOM IC-2100H
YAESU FT-2500M
ADI AR-146

Any info is very appreciated.

THANKS!!!!!!!!!!!!!

Hello Richard:

I would rank the choices:

1) Yaesu FT-2500
2) Icom IC-2100H
3) ADI AR-146

The FT-2500 is the most rugged of the 3 and handles intermod very well. The ICOM is not far behind, I guess I would get the radio that has the best price of the 2.

The ADI-AR-146 is a clone of an older Kenwood 241 and should be the cheapest by far. If budget is important, start with this one. You can always usd it for packet later when you get a dual mode 2m/44 rig.

Hope this helps

Thank you very much for the reply.  The ICOM and the YAESU are the
same price, so it looks like the ICOM.

Thanks again.

I have the following scanners for sale. They are both used, but in good condition. No manuals, both have antennas

1 - RS Pro-2039 200 CHannel Hyperscan, desktop unit, w/120VAC plug.. Asking $150 obo

1 - Uniden Bearcat SC150, date code OFIG, serial # 75026297, black unit with charger & antenna $125 obo

ALSO: A USED but works fine, INTEL 200MMX processor. I pulled t his from my
computer to install a 233MMX just now (3/5/99) Make offer.

I also have many BW cameras(c-mount), some with lenses, A vivitar 3000 digital
cameras ETC

About a month ago, someone posted a link to a
real audio broadcast of a repeater somewhere in
California or something. I've lost the address, is
there someone that can re-post it or e-mail it to me
please?

The title was "shut the f**k up and sit the f**k down"

Thanks

Now, now, cost-effectiveness isn't the only reason to homebrew, is it?
Without wanting to start a thread on the philosophies of homebrewing,
it must nevertheless be stated that the desire to build need not come
solely from a desire for economy. Such a view, stated alone, reflects
an egocentrism on the part of the speaker/writer.

> if that is the case do a search on MRF transistor amplifiers and in about an

> manuals at the library.

Now, here is the egocentrism-destroying part! Well written, Art.
Don't forget that the 1998 version of the ARRL handbook has an article
in it on a 2m amp using one of those RF power modules.

There's also a guy on qsl.net who parallelled 4 (count 'em, 4) 70cm
power modules to make a 100-watt power amp. Go to www.qsl.net and
perform a search for "amplifier" to find it... Interesting stuff!

You might be better off "homebrewing" a beam antenna. Much less work
and cheaper too.

Another approach would be to salvage the PA stage from a
defunct VHF commercial radio (unless that's why the radio
was scrapped...) and rig up some switching. One particularly
slick no-moving-parts approach I've seen involves quarter-
wave transmission lines (practical at 2m) and diodes.

I was just reading about one in the '99 ARRL Handbook (p13-44). Uses a
toshiba S-AV7 or S-AV17 for 25 or 50W version respectively... wonder
where to find these, and how much? Alternatively, Radio Shack was
closing out their 2m amp for $30 a while back, if you can find one.

Yes, for awhile I had a Heath 1w in/10w out amp that used that arrangement. Really pretty cute -- two quarter-wave lines, with a pair of back-to-back diodes (in fact, I *think* they were plain ol' 1N4148s but not certain) across the lines where they joined. One line on the output connector, the other on the input.

No drive: the diodes don't conduct (at least as long as there's less than 0.7V P-P of RF on the antenna!) and the lines essentially behave as a piece of coax. Feed it some drive, and the diodes conduct -- putting a short circuit at the junction point -- and reflecting a near-infinite impedance at each terminal of the amp. Worked quite well. (especially on a packet station in the room next to my bed!)

Um - that's actually 0.7 volts at the diodes. The 1/4 wavelength of coax acts
like an impedance matching transformer, converting a low voltage signal at
the antenna terminal to a high(er) voltage signal at the diodes. The diodes
clip this down to 0.7 volts, which then gets transformed back down to a tiny
voltage at the amplifier input by the other 1/4 wave coax run. The impedance
transformation is important - otherwise you could just hang the diodes on the
amplifier output.

Even seen a glass light-emitting diode? One that projects "1N914" on the
ceiling?

Dave

Mike,
Why bother, I have a Dymark 2 Meter amp for an HT, you can have it for $20.
plus shipping.

Hey, I've been listening to this thread for a while, and I'm not too sure what is happening with the two pieces of coax... Are they for switching the amp in and out of the circuit--in effect, acting like a T/R switch? If so, where can I find some more info on this? It sounds interesting. Thanks.

It's standard transmission line stuff, the way a 1/4 wave
line inverts impedances.

On receive the diodes act like an open circuit. On transmit
the diodes at the PA output conduct (short circuit), appearing
as an open at the other end of the line, disconnecting the
antenna (not to mention the PA output from both the PA input
and the HT input) from the HT. Similarly, the diodes at the
HT output conduct (short), appearing as an open at the other
end of the line, disconnecting the antenna from the HT and

sending its power to the amplifier instead. All the usual
references.

I've seen examples in the ham literature - in Ham Radio
many moons ago, and in VHF Communications/UKW-Berichte
quite recently.

Another clever application of transmission lines I saw recently
involved faking a variable inductor in a VXO by transmogifying
a variable capacitor with a lumped 1/4 wave line...

> Um - that's actually 0.7 volts at the diodes.

That too..

Is not the impedance of the diodes substantially higher than 50 ohms?
(I mean, when they aren't conducting)

In that case, the 1/4wave line hooked to the antenna connector is connected to another 1/4wave line hooked to the transceiver connector, which in turn goes to the input of the receiver, which is in theory a 50 ohm load. (admittedly in practice not true, but presumably close enough to make things work) So we have 1/2wave of 50-ohm transmission line, ending in the 50-ohm load of the receiver input - essentially the same thing as if we'd added another 1/2wave of RG-58 between the antenna and the receiver.

Now, when we key the transmitter, these diodes (which had been just a minor impedance bump in the middle of a 1/2wave piece of transmission line) become something pretty close to a short circuit. Now, the two pieces of 1/4wave line do become transformers, transforming the very low impedance of the conducting diodes to a rather high impedance across both the input and output of the amplifier. So the two lines have relatively little effect on the input and output matching, and at the same time the near-short-circuit at the midpoint prevents output RF from getting back into the input. (and turning the whole thing into an oscillator)

For sale:

I have for sale eight Kenwood Tk-806 commercial/LMR radios. I have three radios which are working (tested tx and rx, carrier, pl, and dpl on both band edges) and five with various problems. I'm sure that the non-working five could be put together to make two or three good, working radios, but I don't want to worry with it. These radios are UHF, 470-490 split (I have been told that they will work 460-500, no guarantees on this though!) and 16 channels. They are very similar in function to a Motorola GM-300, with a few differences. (Couldn't find a pic, sorry...) The first difference is the size. The radios are roughly 5.5" wide x 6.5" deep x 1.5" tall. Second, the radios have an orange-backlit quasi-alpha display (eg Ch 1-Ch 16). Each channel set to repeat has a talkaround which is selectable by a single button (changing the display to Ta 1-Ta 16). Also, the front panel has a second button for monitor/open squelch, power push-on/push-off switch, volume control, scan, scan list delete/add (it's very easy to reprogram the scan in these) and REC for option boards such as DTMF decoding and tone signalling options, as well as the RJ-type mic connector and the channel-selector knob. The radios are at least 30 watts out within their bandsplit- I can't remember the exact figure but they may be up to 45 watts.These radios also support hang-up functions, programmable scan timings, TPL/DPL/InvDPL, etc.

Anyway, I would like to sell these radios as a lot. I think that $300 each for the working radios and $250 for all five of the dead ones is fair- total $1150. I think that this price is fair; if you don't, make an offer.

NOTE: I do not read these newsgroups. PLEASE E-MAIL ME AT TVSJR@SPRYNET.COM!!!!!!

Thanks
Terry

Shame on you.  There's a whole lot more to amateur radio than spending
money.  What Dan is wanting to do is both legal and beneficial.  If he
builds the amp and you buy one, he'll know a lot more about it.  Find
something constructive to say or move on.

At 1/4 electrical wavelength a transmission line will act like a short
circuit.
Thus it is called a shorting stub. This is the basis of waveguide.
Waveguide
is basically two 1/4 wave shorted stubs joined. The shorted end is the edge
of the wave guide. This makes it easy to guess the transmission frequency
of some equipment by the size of the wave guide.

It has been difficult to tell from the discussion, but it sounds like there
is a 1/4 wavelength stub in series with two diodes (that are in parallel but
reversed with each other) then another 1/4 wavelength stub.  Is my
assumption correct? or is the amplifier also between that?  Thanks,  Michael

Ignore the spamming BS you may get here Dan,
Ofcourse you can HB an amp.. I have many of times. It's fun and a great learning experience.

It's a shame there are so many "appliance operators" hanging out on VHF but with today's ease on licence requirements I guess we get what we get if we're going to keep the hobby alive.

I have used many different sources from CCI to RF Parts Ramsey sells an OK kit at a decent price but the best performance I ever had was by using an old VFH Marine Tube rig. and converting the PA to 144 Mhz WORKED GREAT on SSB and FM.

Good luck and don't let the CB'rs get you down... <= That should stir up some interesting discussion!

Sure wish I was better at ASCII art<G>..  The following will probably only
make sense in a fixed-width font small enough to provide at least 80
characters to a line:
```

```
input connector ==============amplifier
electronics======================output connector
                       |
|
                       |             1/4wave line
1/4wave line                       |
                      =====================|==============================
                                                                |
                                                             diodes (2, one
with cathode grounded & other with anode ground)
                                                                |
                                                            ground
```

I'll try to draw something more sensible in Windows Paint & post it to:
personal.bna.bellsouth.net/~w9wi/trswitch.htm

That'll take a few minutes, don't expect to see it any earlier than 2200 CST
Friday 19 March.

I suspect, despite all the sarcasm, that the original poster intends to use
the HT as either a mobile, or base. I too would be interested in home-brew
2m+ amps, but I personally would prefer to hook them to a mobile/base

If you tried this URL Friday night or Saturday morning, it probably
didn't work. (it returned a text page but no drawing)

My error; I thought Front Page would do more than it did. I fixed it
late this morning; the picture should be there now.

It is about time that Purdue University launched
its own satellite. Every other school has one.
And Purdue is the mother of the astronaut corps!

Friday, March 19, 1999

Hello Everyone!

The next Purdue ARC Satellite Project meeting will
be Monday, March 22, 1999, starting at 7:30PM. The
meeting will be held at the club station located in
the Purdue University Memorial Union West Tower.

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS   (from the 60's-80's)
-OLD KEYBOARDS   (w/ knobs or sliders)
-OLD DRUM MACHINES
-OLD SEQUENCERs   (w/ knobs for each step)
-OLD VOCODERs   ("robot-voice" sound)
-MODULAR PATCHABLE SYNTHESIZERs
-RACK SYNTHS
-INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline
-Roland TR-909 Drum Machine
-Roland TR-808 Drum Machine
-Synton Syrinx Monosynth
-All broken ARP products
-ARP Avatar Guitar synth
-Recording studio effects processors
-Roland System-100m

http://members.aol.com/rolandman1/index2.html

Also looking for old literature on synths and electronic music techniques and equipment...

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

Hi BD,

I've used an FT-840 for about 5 months now and have really enjoyed it. I rate it an excellent, though not stellar, rig. If you're going to do CW, be sure to get the optional 500 Hz filter. Obviously, it's not a contester's rig, but for getting started it's hard to beat.

Spend some time or money on a decent antenna and you won't me disappointed.

73,

Marv, KC0EGB

Hello Everyone,

I am looking for a "High Power", (1KW +) mobile stick antenna for HF. I need one for 40 meters and one for 75 meters. I currently have a

"Hamstick" from Lakeview Co., for 40 & 75 meters but these only are rated at 600 watts PEP. I would like to stick to the "stick" design and avoid the antennas with the big coils at the bottom.

You can e-mail me directly at n3fvg@worldlynx.net

Thanks for your help,
Piero - N3FVG

Anyone know if and how to mod a V7A for extended RX. I know the G707A can be modded to RX from 118-174, 300-520, and 800-999. I was hoping that the V7A could do something similar. I know how to mod for extended TX. Thanks in advance.

I seen that the new g707a does get father on receive than the V7a.
Kenwood has the mod for the G707a at their web site and I took a look
at them. The boards where the mods are performed are as far as I can
tell very similar. If it weren't such a pain in the ass for me to get
my radio uninstalled from my car, i'd perform the 707 mod on my V7a
just to see what happens.

Mars/Cap mod for Kenwood TM-V7A

Remove the top and bottom covers and the detachable face holder.
Look at the pc board that is vertical behind the front of the radio.
There will be
2 small chip resistors on the left side of the board. Carefully remove
the one
with the number 0 . It will be the one closest to the left near the
grounding
spring. You will probably have to scrape it off with a pair of needle
nose
pliers.

After you remove it the TX should be VHF TX 136.995 - 173.995. RX should
be 118-174. UHF TX should be 410-469.995 RX should be 300-470.

Hi,

I am currently working on a PCB which has 3 AC voltages coming into it from a wall mounted transformer (with several windings). The 3 voltages are fed to Linear regulators to produce +/- 15 and +5.

The last version of this PCB just turned on when the unit was plugged in, but that is no longer acceptable. I need now to be able to turn on/off all voltages, via a front panel switch, with the wall mounted transformer plugged in.

I would think that I need something like a single-throw-triple-pole switch, if such a thing exists. Or, perhaps I could use a SPST switch to control one supply and then use relays to control the other two, but that seems excessively complicated. If the transformer were on board I could just use one high voltage switch to tuen on the whole thing but I can't change what we have.

I would appreciate a suggestion.

Thank You
Tom

Well, one solution is to use regulators which can be turned on and off
with a logic signal, such as the National LM3940 for +5 and +15, and
and LP2952 for the -15. Then, a small switch or a processor could be
used to turn the regulators on and off, rather than switching the AC
side.

Are the people who are offering you the GP68 bothering to tell you that the GP68 is a gray market radio imported from Asia? Are they also telling you that the radio is ILLEGAL for use in the U.S.?

Three pole toggle switches should be readily available from Newark,
Allied, or other wholesalers.

How about the right to do it because they choose too without local
restrictions impeding that right!

Hams happily DO IT and still get shat upon by local authorities!!!!!

Gary

Why don't you order the radio through Bandercom, Lentini Communications,
Javiation, or one of the other more reputable mail-order places. Check out
http://www.strongsignals.net/htm/internet.htm for a good list of some
mail-order companies.

You must be one of the unlucky ones not to have a 2nd gen. 50. My cell's
just fine.

I purchased a Comet M-24B magmount 2M/440 antenna today for use with my HT. placed the antenna on the trunk lid and routed the coax under the seat. The antenna worked well and I was very pleased with the performance. I then header for the car wash and removed the antenna. After removing the antenna, I noticed scratches on the trunk lid. My car is only one month old and I am EXTREMELY PISSED! Examination of the base reveals that it will scratch the surface of a vehicle. In order to be safe, the base must be perfectly smooth. The base on the comet M24B has some sharp edges near the outer perimeter of the base. This is not a manufacturing defect and is normal for this model.

My next trip was to the car dealer body shop. The scratches were too deep to be buffed out. The total is $280.00 to repaint the trunk lid.

This is the most expensive antenna that I ever bought.

BUYER BE WHERE!!!

All mag mounts scratch the surface. That is common knowledge.

You can try a small circle of wax paper, this will delay the
inevitable, but not for long.

All it takes is for some iron filings or rust to grab onto the magnet
and you will scratch the paint. You are far better off drilling a hole
and installing an NMO mount. Mount the antenna on the roof where it
belongs. The next buyer of the car might appreciate the mount for his
cellular or cb install.

It may well be: Right now, I'm only working 2 meters. Yes, I know there is much
more out there, but I just don't have the funds or equipment available. I am
studying my morse (I'm hopeless at it, have been for the better part of a year,
but I keep practicing) so I'll be able to run VE3JW (National Museum of Science
and Technology, Ottawa)'s HF side of things. Until now, I've still only been
operating it at 2m... I'm a volunteer there.

Yes, you could set up a patch at home- it will need a separate license/fee, so
your license would be $23 a year, and another $23 for the fixed station- you
can't operate in two different places at once (within reason) with the same
license.

The repeater side of things needs an advanced class- not sure about the patch...
wait- since it is unattended voice, yes, you should be advanced.

There are probably four or five repeaters in Montreal equipped with patches- you
should have no problems finding one.

> you do?

I don't have much eperience with handhelds, unfortunately- at least on the
buying end. Since you aren't mobile, you still have to ask yourself a few
things.

-Do you operate while walking/riding a bike?

-Do you operate only from home?
-If you operate from home, are you in a house or an apartment building? Are there adjacent buildings?
-Do you have access to a car battery?

If you aren't riding a bike, or walking around, something higher powered might be better for you. I don't do a lot of driving around either. My radio is sitting here on the desk, hooked to a car battery on a trickle charger. If you're in an apartment building (and you still have a place to put the antenna) you'll want something high powered so that you won't be muffled excessively by another building which is sitting right on top of you.

> (and where and how much! :)

You more interested in 6 meters? I'd really start with two meters.
The cheapest, and very effective antenna in called a 'free plane.' It is also known as the quarter wave ground plane. I can email you some info on how to build it... all it is is a few stiff wire coathangers and an SO-239 jack. You'll need a big soldering iron :-) but this is the only antenna I swear by- I use it for voice/packet/the works. It's great, and costs under $5, and it won't disturb the neighbours.

>

Intermod is little squeaks/squawks/chirps/buzzing etc. up and down the VHF/UHF bands. It's caused by engine noises, electrical equipment, etc. Don't buy one until you've decided you've had enough of all the extra noise- some tranceivers already have a filter built in. Talk to other hams in your area to find out if it really will be a problem for you.

hmm ok so 2 licences...but do you have an idea of the cost of things?
(what do i need?)

But is a 5Watt handheld enought in a town scenario? (residential/down town etc?)
I also want to use it from my house to talk to a friend a block away...is
the house blocking the radio waves?

> > hehe are there good SMA connected antenna for 50-54Mhz band for handheld??
> > (and where and how much! :)
>
> You more interested in 6 meters? I'd really start with two meters.

well i ll have 6 meter on the radio i think i ll be buying and i heard
small antenas didnt work correctly with that frequency...

> The cheapest, and very effective antenna in called a 'free plane.' It is also

Hmm of course!(with radio shack pieces? :) Do I have to put it on the roof
of my house? and how do i get a cable from the roof down to my basement 2
floor under any tricks? Do I have to pass Coax cable on the side of my
house? =)

> Going with a ham friend is always the best move!

hmmm yeah...if i dont find any ham group can i pass my test at an
Industrie canada building?

The first thing I do when I bring a new car/truck home is to drill that 3/4
hole in the top and mount my dualbander right on top, where God intended
antennas to be. Not only will this result in less damage to the car in the
long run, you have to answer all kinds of questions like "Why does YOUR
radio talk so far?? My mag mount doesn't do near that good" such are the
penalties of Leadership, I guess...

Jim, you learned an expensive lesson. As a veteran of many, many magmounts, the absolute very first thing I do is put duct tape on the bottom of it. And I change the duct tape layer about every 4 weeks or so. Every time you remove the antenna, you must, without fail, rub your hand across the bottom. It's amazing what those magnets will pick up. And most of it will scratch the paint.

Gee, for $280 I managed to mount all 10 of my antennas right on the
roof on my Expedition! However, one caveat, if you plan to do this, be
sure to use the **BRUSHLESS** carwash when you need to wash the car.
One experience I have found is while the body shop has your car, they
can drill very neat 3/4" holes in any part of the car so that you can
correctly mount antennae!

Alex, I know of no amateur satellites that have interconnecting radio
links to other satellites, but when AMSAT and their international
partners launch the next one in a Molniya? orbit, you will be able to
talk to France without any need to relay.   Two more comments:
(1) learning morse code will not kill you -HI!
(2) Keep working at it, and both your English and radio skills will
surely improve, meanwhile bonne chance, mon ami! 73!
Allan, W1AEL since 1954.

When I useta work for a living, I allways placed a folded peice of Reynolds heavy duty alum. foil, just folded in a square at least the width of the mag. between the magnet and the car trunk, HF only with hustlers guyed down by looping 40 lb.test fishing line from the resonator then around the trunk hinges and back to the resonator.   I've been mobiling in and out of rental cars, 2-3 a week for many years. Never harmed a car. My rig got scratched up like the devil from the cars and vans but I did'n scratch the car!!

   Above is good advice.  Personally, I always glue a thin layer of Felt to
the bottom of my mag mounts.  Also, when they are removed, I store them with a
baggie over them to prevent picking up pieces of metal.

  Ed

Jim, avoid mag amounts if you're worried about scratches and that sort of thing. Instead, get a chalk line and a buddy to help you put a big blue "X" on the roof of your car. Then pull down the headliner. Using a 7/8" hole saw, take the plunge and drill at the center of the "X". You might want to use a center punch first to keep the drill bit from "wandering." Install a Larsen or other NMO mount and run the coax down behind the pillar trim to your radio. Put the headliner back up and screw your NMO antenna on top. Enjoy some good radio. ;^)

Brian/N0iMD Oh, if you bought a GM vehicle, don't worry about deep scratches in the paint. In two or three years, the paint will just flake off and you'll never know that it was ever scratched in the first place.

I have a MINT, condition VHF SP50 unit, barely used, 10/10 condition, Model #
P94YQT20A3AA, 2 channel, 5Watt with good
battery, drop in charger and antenna. I will sell for $200. plus shipping, let mek
now if interested.

Additionally: I have a Mint condition, 2 week old, modified Icom IC-Q7A dual band
Transceiver, receives from 30-1200MHz (less

cell), TX 130-174MHz & 400-470MHz, great 200 channel radio/Scanner. With antenna,
clip, box and manual. Sell for $175.00. I
also have software to extend range to .5-2GHz approx. You'll need cable...or I
just bought a VX-1R cable which should work,
I'll sell for $25 extra

GE Portamobils (2), with handsets, chargers and batteries. Low VHF (2 channel
46.8/46.9MHz) Appear to work, I have no
antennas, sell for $50 pair

Prepayment via Postal MO or COD preferred.

Well Jim,

You got a plethora of responses and responses and suggestions. Disregard all of those who say drill a hole. First, if you had wanted a hole in your brand new car, you wouldn't have bought the mag mount, right? Second, you might want to move your rig to another car at some point, right? Third, you have gotten your signal out of the passenger compartment and into the atmosphere, you've basically won the game right there, so how much difference is moving an antenna with good gain to the roof going to make? If you routinely work distant repeaters, maybe you'd see a slight difference.

Take my advice: Take Ed's advice and glue a piece of felt to the mag. I purchased a "bag of rags" from my local auto parts store, cut a black rag to size, and glued it to my mag. It will soak up a little water, so wash under it occasionally.

73
Jim

Hola, mi duda es la siguiente:

Imaginemos que tenemos uno o dos coches en un pa�s sudamericano subdesarrollado y queremos utilizarlos como Taxis. Pero para sacarles m�s provecho utilizar la radio.

Teniendo en cuenta que el presupuesto es m�nimo. �Que tipo de emisoras se pueden utilizar para esto?. �Y sobre la antena?. �Que aparato se utiliza para conectar el tel�fono a la emisora y poder atender desde los coches las llamadas telef�nicas?.

Como repito el coste ha de ser el m�nimo posible puesto que aunque hay mucha voluntad y ganas de trabajo, el presupuesto es m�nimo.

Si alguien tiene alg�n equipo que no utilice, o que le parezca obsoleto y le moleste ... Pues eso!!.

Cualquier informaci�n al respecto me ser� de gran utilidad.

Pod�is encontrarme en: CorreCorre@infomail.lacaixa.es

Como curiosidad. �Se puede colocar alg�n decodificador para que otros no puedan enterarse de lo que decimos?. �Es f�cil, incrementa en mucho el precio?.

Butch Magee <butchkay@netdoor.com> wrote:

> And do not forget about the antennas and the height of the awning when you pull into a fast food drive up window. I really dorked up Hustler super 40 :o) it happens man..........then you feel soooo stupid!

I have a Diamond drilled into the roof of my Explorer. I am constantly twanging it on tree limbs and those "Caution: Max Clearance xxx Ft" signs. ;-) It actually has a fair amount of give - three years of this and the antenna is still intact.... so is the roof of the car.

Everytime my girlfriend drives I remind her to pay attention to clearance signs in garages, fast food places, etc. She is the one I am afraid will rip the thing off the roof since she is not a ham, and doesn't pay much attention to my radios.

I made a label with black letters on clear tape (one of those P-touch labelers we have at the office) and stuck it on the rear view mirror. The first time I cleaned the mirror with Windex the label started falling apart so I guess I need to try another one somewhere else.

ANTENNA UP - 9 FT ANTENNA DOWN - 7 FEET

She knows how to fold the antenna down if she has to.

> news1@airmail.net wrote:
>
> > Gee, for $280 I managed to mount all 10 of my antennas right on the roof on my Expedition! However, one caveat, if you plan to do this, be sure to use the **BRUSHLESS** carwash when you need to wash the car. One experience I have found is while the body shop has your car, they can drill very neat 3/4" holes in any part of the car so that you can correctly mount antennae!

I have a cool little hole saw from my installer days that cuts very nice 3/4 inch holes. The stop keeps it from going deeper than about a quarter inch. All four of the cars I have had in the last 10 years have had holes and NMO mounts - even the leased car! I drilled the holes and had the radio installed before the DMV sent me license plates.

This is typical of just about any mag mount. I haven't found a "scratchless" one yet. While you might be told to disregard those who are telling you to drill a hole... Drill a hole!   :-) Or consider a "hole-less" trunk mount. You can get those that fold over inside the trunk so you can "hide" the antenna if you think its necessary.

A good mobile antenna system will have a good ground right at the antenna mount.   Since you don't get that with a mag mount, its a good excuse to abandon it.

IMO - mag mounts suck. I have one ... I use it on rentals.

I'm looking to build a CI-V unit for my ICOM 746. Although I'm not really looking forward to giving ICOM $100 (or more) for a computer to radio feature, I'd sure enjoy the experience building such a unit.

CI-V allows your computer to communicate with your ICOM radio.

Does such a WORKABLE schematic exist? Has anyone tried it?

Please advise...

Am in the process of trading for one of these pre-Watkins-Johnson

VLF receivers. Anyone have any good basic info on the unit? Anyone used one?

The receiver tunes 1-600 Khz and is all solid state.

Am getting a good deal on it, but want to hear more so
I will know what to expect when it arrives.

VHF unit is sold!! Thanks to all...

I have one more UHF SP50 , Mint condition programmable radio with charger and battery.
Motorola Model # P94YQT20A3AA, 2 channel/4W set now at ~476.813MHz. I sold the
VHF transceiver, I will sell this one for $200.00 plus shipping <<OR best offer>>

I have a Pro34 (cat #20-135/9135) Service Manual, sell for $15

ALSO, CRB research Scanner Mod Book
Mods for:2004/5/6/34/2021/BC-950/bc200/205xlt/bc760xlt... $15

Additionally: I have a Mint condition, 2 week old, modified Icom IC-Q7A dual band Transceiver, receives from 30-1300MHz (less

cell), TX 130-174MHz & 400-470MHz, great 200 channel radio/Scanner. With antenna, clip, box and manual. Sell for $175.<<OBO>>
I
also have software to extend range to .5-2GHz approx. You'll need cable... But new software works great now that kinks are
out of it...

Hello all,

I have an Icom Deskmike #IC-SM6 and need some info about it,
such as schematics and manual. All the wires from the gain pot on the bottom
have come loose and need to be rewired

Any help would be appreciated

I'm thinking about ordering a digital soldering iron from TechAmerica. This model number is 910-3893.

Has anyone ordered this item? Is it a good unit? I'm wanting to know because it is a $100.00 item and I would rather spend the money on a good unit. The digital readout intrigued me.

Please advise.

:

It is a standard tool, sold commercially.  You would buy
it at a parts house for more.

Any suggestions for software?

I found one on the web which uses the 1488 and 1489 instead.
The Maxim is nicer but I think I have the older devices on hand..
Looks like a nice project.

I have a mixed pair of one Regency RPH410 VHF tansceiver & one Wilson HS-410 VHF transceiver. Both units are intact(one missing case screw) these are the same radio by different MFG, no antennas(BNC jack on top) . I have one battery between them, it is not charged. From what I can ascertain, these radios need some help, but they did, when the power in the battery was good, come up with display test. Both have Keyboard for on unit programming, an LCD screen, pri,rst, scn & rvw buttons as well as switches for light, keylock and power(hi/low). These are older units I was going to send for repair, but I will take the highest bid for them.

This may be something simple that I have overlooked, but here goes anyway.
I have an IC-2100H mounted on my computer hutch on the top, the power supply is down below and BOTH are at least 3 feet way from the computer itself. My coax is run high along the wall and my computer is on the floor. No power lines are cossing or coming close to one another.
Now with this, I am still getting interference on most of the 2m band and it only exists while my computer is on. I have ruled out the printer and monitor.
HELP!

The electroluminescent backlite in my Optoelectronics 3000A frequency counter has failed there is no voltage going into the backlite's pins. However everyting elce workes on the unit. The board is surface mount and hard to follow I was wondering if anyone had a schematic they could scan and send to me?

Try to ground the radio and power supply to true ground as close to the radio as possible. Make sure that the computer is on a different electrical circuit than the radio power supply. This might help. Make certain that the coax is of good quality, and finally consider getting some ferrite material for the cables on the computer. Hard to guarantee well shielded cables on a computer any more. Everyone goes for cheap, which means poor quality.

Hi there! �:) �I am an electronic musician seriously searching for old
electronic musical equipment from the 1960's-1980's. I will consider
anything, in any condition - even broken or parts-only units:

-Old synthesizers   �(knobs or sliders preferred but not necessary)
-Old drum machines
-Old sequencers
-MIDI equipment
-Effects processors
-Vocoders
-Roland TB-303 Computer-Controlled Bassline
-Roland MC-202 Microcomposer
-Roland TR-909 Rhythm Composer
-Roland TR-808 Rhythm Composer

ANYTHING SIMILAR

Moog, ARP, Sequential Circuits, Oberheim, Roland, Korg, Yamaha, EMS, EML,
Buchla, Serge, Ionic, PPG, Digisound, Paia, Aries, E-mu, Polyfusion,
Steiner-Parker, Mutron, Maestro, Electro-Harmonix, anything similar.

http://members.aol.com/rolandman1/wanted.html

Roland Space Echo, tape echos, ring modulators, filters, phasers, flangers,
any voltage controllable effects Oberheim Xpander Sequential Prophet 5 w MIDI
Studio 440 Pearl Syncussion SY1

If you have anything you'd consider parting with or know someone who might,
please email me at rolandman1@aol.com
Please respond privately and include your phone number as well if you'd like.
 �
Thank you very much and apologies in advance if this message bothers anyone.

Use double shielded cable like RG-214 or RG-223. The 100% foil shield of
9913 or LMR will work well too.

Also put your PC in a good RF shielded case. My PC in a cheap case causes
all sorts of interference and I used to interfere with it until I wrapped
all the cables around ferrite rods. My Mac has neither caused nor received
any interference at all. Its case is well shielded.

Alex,

Also ground your PC case with braid to the 'radio' ground that goes to
your ground rod. It worked for me.

I have a mixed pair of one Regency RPH410 VHF tansceiver & one Wilson HS-410 VHF transceiver. Both units are intact(one missing case screw) these are the same radio by different MFG, no antennas(BNC jack on top) . Ihave one battery betweenthem,

it is not charged. From what I can ascertain, these radios need some help, but
they did, when the power in the batterywas
good, come up with display test. Both have Keyboard for on unit programming, an
LCD screen, pri,rst, scn & rvw buttons aswell
as switches for light, keylock and power(hi/low). These are older units I was
going to send or repair, but I will take
the highest bid for them. Last bidders backed out...

I've been down this road. You need to run every cable comming out of the

computer through a ferrite decoupler. Sorry can't think of the name of
the device at this time, but Radio Shack sells them for about & 5.00
each. They just snap around the cable. My problem was comming out the
modem cable. KB7VZZ.

Hi,

I was wondering if anyone has ever attempted, or considered attempting to install two identical bands (either two 440 MHz, or two 144MHz modules) in the Kenwood TM-732 tri-bander.

This could expand your receiving/monitoring capabilities on the selected band.

With two antennas and reasonable physical separation you may be able to do in-band repeat. I will concede that the TM-732 is a poor choice as repeaters go, but at low power used as a single user repeater its not too bad. (I also don't have enough RF expertise to know if a duplexer would be necessary in this hypothetical configuration.)

Any thoughts (other than it voids the warranty)?

Regards,

Brian Yates

The Motorola HT-220 Page has been updated.

See http://www.batnet.com/mfwright/HT220.html

This website features the Motorola HT220 handheld with information
including model tables, frequency conversions, parts and accessories,
manual numbers, tech tips and stories.

Comments about the HT220 by visitors to this webpage:

"THOUSANDS STILL IN USE."
"I use both VHF and UHF models everyday."
"I've taken VHF units up to 220 MHz (a real 220 220)."
"HT220 is truly an object deserving of such a shrine!"
"It was and still is a engineering marvel."
"They are very easy to re-condition."
"I still think it is the nicest looking, most purposeful radio ever
produced."
"The HT-220 still lives!"
"I cut my teeth on the HT-200 and went on to the HT-220."
"I can remember in the mid-70s the envy we all felt for the BMOC that
had an HT220."
"What is that?!?" (from a generation X-er first seeing a HT220)

I need No. Dakota for my W.A.S., and I would like to contact someone there
to set up an on the air contact at your convenience.

Would prefer cw - on 40 or 15 mtrs.

Thanks for any help.

John

P.S. I'm aware of the nets - I'd like to try it this way - thanks.

Does anyone have any comments or information regarding the add-on board available from Vine that redistributes gain in the above rig and claims to reduce the level of audible hiss in the rx? I have emailed Vine for details and not had a reply. The details on Vines page are sketchy - see
http://www.gw3ydx.demon.co.uk/whatsnew.html
Any comments, experience, would be appreciated.

Hi :) I'm an electronic musician seriously searching for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment (MIDI and pre-MIDI).

In general, I'm looking for working or broken instruments made in the
```

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~. The more unusual, the better.

Quite honestly, I would wait until you get your ticket and try it for yourself. I have had one of those HT's, and have had no problem hitting repeaters when in the woods here. This is a very hilly region (NE PA), and have had no problems with the 5 watts out with my car adapter. Make sure that your SWR is ok before you xmit with that car antenna... don't just hook it up and try it! You might want to go to a fest and get a good HT antenna... I think that Diamond makes one that is a bit longer than the "duck" that comes with it. If you want to build an antenna, Radio Shack (gaff) makes mounts for the car. I have used a stainless steel whip about 4 feet long with good results. SWR is going to depend on where you mount it, and what kind of vehicle you have. Let me know your results.

ICOM 2400a dual band mobile.
I got the mod to open the rx and tx on both bands but i need some clarification on a couple items before i do it myself.
The mod instructs me to clip 4 diodes total (2 for 2 meter and 2 for 440)
Then instructs me to install 2 chip diodes, this is where I need to know if theses two chip diodes are for the tx or rx ? If so then i need to know where I can purchase these chip diodes. The mod gives part #s.
Any help would be great.
Thanks

First, I want to thank the 20,000 visitors to my FT-101 web page last year.
Also MANY thanks for additional details, corrections, and encouragement.

But I do want to point out that Leslie Barclay VE4CCC stole 100% of my web page, changed my callsign to his, and called it his home page! It was a 100% copy. I received an email from an DX ham who noted this page.

After I sent VE4CCC an email, he deleted most of it, but STILL has my original drawings and photos. My callsign is STILL on them! I do not want him to have my original artwork. Look at this page:

http://www.autobahn.mb.ca/~barclay/

LESLIE BARCLAY
715 WARSAW AVE
WINNIPEG MB R3M1B6 CANADA

His email is: ve4ccc@rac.ca and VE4CCC@MSN.COM

It really takes the fun out of all the hours of research and scanning to make such a page. I don't know who this kid (newbie) is, but I have sent him email and also sent a copy to the system administrator of Autobahn. No luck.

Best of 73,

Al, NW2M

I ve been looking around for a handheld radio and i found the IC-T8a (which has aparently a broken batery clip), the VX-5R(which has a broken CTCSS function) and the IC-R2/IC-R1 which has a nice scanning range but no output capabilities...(ic-q7 is too weak to only have that radio :( )

Is there a radio out there that can do what these 3 radios can (I MEAN EVERYTHING) and maybe more in one portable radio of that size? This will be the only radio i ll be buying i dont have anything else so i d like a complete radio =) (with all the frequency including cells!!)

i m new to all this radio world so i dont know what all these function are doing yet but i intend to find out (like ctcss pocket beep etc...) and i want to be able to do packet ax.25 etc with my computer too (i m using linux)...

thanks in advance for answers,

alex

P.S. please also reply to me by mail by removing the REMOVE :-)

For those of us who are interested in such things, I just saw a ham tri-bander in the movie, "National Lampoon's Vacation."

This is the original "Vacation" movie, with Chevy Chase where the family takes their new car to Wally World.

At the beginning of the movie, as Chevy Chase pulls his new car into the driveway you can see a tower and tri-bander at the house next door. For all of us who have to fight against restrictive convenants, it's interesting to note that this is a nice neighborhood... definitely, upper middle class.

The tri-bander was a four element one... it looked a little like one of the TET or KLM models.

Admittedly it's not much more than a blip on the screen, but at least it shows a nice neighborhood with a tower and beam.

As I contend, towers and antennas are works of art, and not only should there be NO restrictions on them, but there should be tax breaks and other incentives for people to install them. :-)

73,
Curt W4CP

yeah maybe i m asking for too many things :)...is the VX-5R a good radio if its going to be my only radio? (can i use it to get to a repeater, do packet pochet beep and all those thing?:)

also how do you call the thing that is the size of a beeper and that detects local radio signals with their frequency and strengh?

And how am i supposed to find unblocked radio (cellular frequency) in canada...since the law doesnt apply here but people seems to be selling US radio or something :P (i live in montr�al and there are no ham store here! :( )

thanks again,

alex =)

You may have been just joking, Curt, but there actually is some basis to what you suggest - That Hams should be rewarded by the community, not chastised for setting up an antenna so that they may operate. After all of the lives saved by Hams over the years, and all of the emergencies and disasters they have helped to handle, Hams should indeed receive some recognition and respect for what they do.

I guess itll be the same then...you need a special cable that plug in the
4 pin hole to have a sound in and out from the radio? (so i can use a
soundcard modem with it:)

> > also how do you call the thing that is the size of a beeper and that

i m not sure either...all i know is that there is something out there that
can detect the nearest radio emission and it s power/frequency... :)

> I can't answer that one either. Listening to someone elses phone calls
> hasn't ever really interested me. I can pick them up one my FT50, but it's

heh thanks :)... i just want to be able to hear what i am allowed to =)
So most portable can have input on one frequency and output on another one
(for repeater as i understand it :)...
```

thanks again!

alex

In Montreal there's Radio Progresive on the TransCanadian, and there this
very good place in Trois-Riviere. I personally prefer Norham in Toronto.
They always have the best price, and the service is the best. Check the RAC
(Radio Amateur of Canada) web site for a page with all the Canadian amateur
radio suppliers.

hmm ok..i found the adress :)

(for the record)

Radio Progressive Montr�al Inc
8104-A Rte Transcanadienne
Saint-Laurent, Quebec
(514) 336-2423

I found some store on the net but i after thinking about buying this or that, i d rather see it first...It s the first time i buy a radio so i dont want to get stucked with something that cant receive anything and cant hit a repeater :/

...

thanks
alex

hehe can i hit a satellite with a basic licence? and how much power do i
need? Also would a 200W amplifier for a triband handheld be expensive?
(doesnt have to be portable though:)

thanks again and again 8-D

> seeing a triband amp.

heh cool! only 5 watt to reach a sat...at what altitude are they? And here in canada there are 4 licence...
A Base licence... 30Mhz + and max 250W.
B 5 word per minute morse code.
C 12 "   "
D superior licence 30 Mhz - and max 100W.

dunno if i can use the sat with the base licence...probably :)

alex

cool...i want to try that! :) What is the output power of those sat? can
you bounce from sat to sat? :)

sorry my english is not good nor my radio skills... :)

what i mean is:
1st: what is the output power in Watt of those sats ? and

2nd is it possible to get to a satellite and get resent to another sat etc
and go far away on the earth by satellite without having to use some low
frequency equipment and learning morse code....(so i could call localy on
a repeater to my grand-father in france for exemple?:) all this using a 5
watt handheld :)

At the very least there should be no laws wrote restricting the wearing of helmets
& boots, or the use of big water hoses by firemen
! Like the no antenna restrictions on hams!

Is there anywhere i can find explanations for the term:
split
pocket beep
etc ...
the stuff i usually see in radio hardware definition, so i can know my

stuff before buying it :)

I am leaving the hobby.. Below is my list of items forsale and
I have more not listed that would be better coming to my qth
to see if you want to purchase.. Basically I'm cleaning house!
Tnx 4 reading my post Thom j.

Items sold are marked as: *SOLD!!* Or might be *SOLD??*
[A]
Forsale: Astron 15amp power supply never used. New $80
asking $50/bo. Cant not ship.
[B]
4Sale "Glen Martin Roof Tower, Thrust Bearing & Heavy Duty!"
Aluminum Mast Price & Specs New from Glen Martin are below:
#1; New Glen Martin Roof Tower, Specs & Price...
Model: RT-424, Height: 4.5', Shelf to top: 34.75, Base width 24�,
Max Ant. in sq ft @ 87mph@6 / 100mph @4.5 / 112mph @3.6,
Max Ant load: 100lbs Weight: 18lbs Price: $162.00+ Shipping
#2; New Glen Martin Heavy Duty Thrust Bearing, Specs & Price...
Thrust Bearing for rotating setups, premium quality, weatherized
twin bearing for 1.3 to 2.6 mast diameters. TB-25 Price: $89.95
#3; Glen Martin Heavy Duty Aluminum Mast, Specs & Price...
MA-2069 106" X 2.375" OD ,.145 wall aluminum hvy duty 12 lbs
$108.00 New Price for all $359.95 + Shipping and Un-Assembled.
Everything is like new and completely assembled. Asking $240/obo.
Must Pickup! Qth Burlington, NJ. I'm about 10 miles S. of Trenton
& 6 miles N.E. Of Phila, Pa.. Email or Call 609-386-9382 Or
if busy Call: 609-386-3272 {afternoon's only please!!}
[C] *SOLD??*=1272BX
Forsale: New never used MFJ 1272B microphone/tnc switch box.
Includes all original info docs, manual, & etc. New $39.95 each +
shipping or sales tax. Asking $29/bo shipped...
[D]
Forsale; Star Micronics. NX-2420 Color Printer
With tractor printing. Includes complete users manual, printer
guide, tractor paper, printer cable, dust cover & extra printer
ribbon. It is scratch free & works great. It is as close to new
as it can be. Price $70/obo Must pick up! You can see how
well everything looks & works. Will include like new printer
cart/table for a few extra dollars.
[E]
2 meter Cushcraft 8elem {ssb or fm} beam with 50ft coax,
RadioShack rotor & control box $80/obo for all.
[F]
Antron 99 with radial kit, 34ft telescopic mast w/ guy wire
attachments & 50ft of coax. $50 for all. Mast needs good
cleaning! The Antron 99 works great!
[H] 'Uniden Bearcat BC 590XLT' scanner. Has all bands
ham, wx, fire, police air & tech opened for more.. Many
features 'i.e. 100 programable memories, scans all band
ranges, instant scan wx, fire, police, air & more. Manual
and antenna included $90/obo Like new.. No 900mhz

[I]
Finally.. I have coax jumpers, guy-wire, L-N connectors,
elbow connectors, 8x coax, plus other computer extras &
more. This is something you should look at and see if you
need any of it or not. Rather sell than have all this just sit.
I haven't checked, priced nor seperated these items yet...

If you see anything or want to come here please re: me or
call (609)386-9382. If busy call (609)386-3272 [please
afternoon's only!! Ederly mother is very ill]

Actually, you are partially mistaken about Canadian license classes: Let me
explain.
There are two license classes: Basic, and Advanced. The morse codes are
considered additives. In order operate anything, you must possess the Basic
license. Everybody must go get this one. The 5 WPM code test lets you work 80
meters and under. The 12 lets you do everything else. The Basic license is what
lets you do 50 MHz and above. You still need a basic license to operate at all.
The advance license class could also be considered an additive. It does not
grant you additional operating frequency privileges, however, it allows you to
own a repeater, as well as being permitted to have an unattended station, and
building your own transmitter. (The jury is out on unattended packet. Since no
voice is being thrown around, it is legal if you take the law literally and

conservatively. General good practice is don't, like ordering pizza over the autopatch of a voice.)
The bottom line is, you have to get the Basic license first, the other tests are perks. If you get 60% or higher on the 12WPM you get the 5WPM automatically. If you take either the 5 or the 12, you need to get 100% (but they let the first five slip.)

BTW, I have a 50 watts mobile, and you can buy them used for the same price as a new H-T. Depending on where you are (montreal) there is much more activity on 2m. If you are on a budget, it's the easiest and cheapest equipment to acquire, and you need piddly amounts of power to reach a repeater. Anyone who needs an amp but lives in Montreal should really consider buying a decent antenna, first. ;-)

I'm in Ottawa, and I can reach everything in the region- Montreal should be no problem, except for man made noise and buildings while driving. If anything, you may want to invest in an intermod rejection filter.

The best move, if anything, would be going to a club meeting. Here is a list of Montreal area clubs:

VE2ARC Montreal Amateur Radio Club c/o James R Hay, P.O. Box 53047 R.P.O. Dorval, Dorval, QC H9S 5W4
VE2CPT Club Radio Amateur Des Pionniers Du Telephone ,1075 Cote Du Beaver Hall, 2 Etage Montreal H2Z 1S5
VE2CUA Concordia University ARC c/o CSU H-637 1455 de Maisonneuve West, Montreal, H3G 1M8
VE2RJQ Club de Radio Amateur de la Rive Sud de Montreal 905 Renoir Brossard J4X 2H4
VE2RUP Radio Amateur Du Qu�bec a/s Jp Rousselle 4545 Pierre De Coubertin Cp 1000 Montreal H1V 3R2
VE2UMS Union Metropolitaine des Sans-filistes de Montreal,12125 Notre-Dame est, Montreal H1B 2Y9
Amateur Radio Club of McGill University C/O Masataka Noda 414-3905 University St., Montreal, H3A 2B5
-(Careful. While I am sure M.Noda is a nice guy, he seems to post some very weird stuff in these newgroups. It may be a language barrier, it may be lack of maturity... I really don't know.)

Write these people, or look them up in the pone book, and call to find out when meetings are.
Hope this helps!

So if i want to have an autopatch for me at home i need an advance
licence? How would that cost by the way? :) (with a repeater maybe... :)

well i d like to get a handheld... i m only 17 and i dont have a car
:)....Is the VX-5R a good choice and will i be able to use it the same way
you do?

hehe are there good SMA connected antenna for 50-54Mhz band for handheld??
(and where and how much! :)

Yup thanks! I m going to get the paper from a friend it ll be a little
more simple, he already has a superior licence..

thanks again :)

A few months ago, a circuit for a high impedance probe (for use with a
spectrum analyzer) appeared in one of the above magazines. I meant to buy
the mag, but it vanished before I got around to it.

As I recall, it used a FET input and an MMIC device for lo-Z out. I'd
appreciate it someone could tell where the circuit appeared, and if I can
find it on the Net. Any information most appreciated.

I'd like to use the cct to couple my HP-312A into a Singer MF-5/CA-5-1
(SSB-50), among other things.

TIA

John Mackesy VK3XAO

Organization: McleodUSA - http://www.mcleodusa.net
Newsgroups: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.misc

Anyone know why I would have feedback in my MC-85 mic with a TS-440? It's
as if RF is getting into the mic, but haven't figured out how! It renders
my signal unreadable, and happens mostly on the higher bands. It happens
regardless of the antenna or ground I use. I strapped the mic boom to the
base using coax shield in case that was the trouble, but no luck.

The 440 does not have a monitor function, so it's not audio. I keep the
speech processor turned off, both on the rig and the mic, and amn very
careful not to overdrive the rig. The hand mic works great, so guess it's
not the rig.

Any help would be greatly appreciated!

Thanks

Dave

Alot of people put ferrite beads in all the wiring to help control that. I'd also look at your antennas. Actually, I've found 85% of rf in the audio problems to really be antenna or ground/ground loop related. I've had loads of experience in this area using my picky ic-730 with a home brew desk mike. The problem always turned out to be antenna related. Rf in the radio happens because rf is on your feedline. It all starts there. All other fixes are stopgaps to the real problem. MK

You may want to look into the possibility that there is RF flowing on the outside of the coax shield braid. How do you test for that? The easiest thing to do is to assume that you have the problem and if your antenna is a coax fed dipole and there is no choke balun in the coax to prevent it, then you've got it - almost a dead certainty.

1) What to do about it? Try ALL of the following:
Use a balun (1:1 current type) right at the feedpoint of the antenna, OR use a several beads ferrite sleeve type choke - again at the feed

point.

2) At the point where the coax enters the house, bond the outer braid to an earth rod. There should be an earth rod or several earth rods all driven into the ground near the point where antennas enter the shack and any radials that you might be using should be tied to that stake or group of stakes.

Pay attention to National Electrical Code provisions that relate to grounding - I won't pretend to advise you on that, there are plenty of experts on that subject who have posted advice on that topic many times this year.

Gary, there are called Mastr PROs......They are best used as paper
weights unless you strip the rcvrs out...for about $50 each, you
can get SOLID STATE GE MSTR EXEC II or MSTR IIs with more channel
capacity and better rcvrs, etc....and less drain on the battery!

Greetings. Season's greeting also!
I've just updated my Old Radio / Valves/Tubes page set, but for the
benefit of all those who have patiently waited for my responses to their
queries, I'm attaching the latest information in this posting.
Please don't flame me for the HTML format, I just didnt't have time to
modify it to plain text again since I do all this stuff manually (and
I'm cooking today!). I hope it's of use to you, and I'll include the
main source-page URL here for convenience, which is:
<http://www.xs4all.nl/~tgale/valves.html> or accessable from my homepage
http://www.xs4all.nl/~tgale/index.html under the 'Old Radios' link on
the map.
So here goes:
<html><head><title> Valve/Tube questions & answers (the newest).</title>
</head>
<body>
<h1>Old Valves Questions & Answers - <i>the newest info</i>.</h1>
Latest update: 25th December 1998.<hr>
<p>Well here we are with the latest answers-to-questions sheet which I
know has

```
been a long time in coming, but due to work pressures and travel, and
also to
family situations, I have not been able to update this is soon as I had
planned to: my apologies to those who patiently waited.
<hr>
Right, well first, I have a question from Marianne
(smiley937@email.msn.com)
asking about a 6V6G valve replacement.
She writes:-<br clear=all>

"Hello, I hope you can help me or give me some idea. I have a old floor
model
radio,that just has static. When i tested the tubes one
came back as not working, it is a 6V6G.  I noticed from your chart it is
the only 6 tube that is not  6.3V  what tube could be used as a
replacement. Thank you, Marianne."
<br> Well, Marianne, although it's listed as a 6V heater type, it's used
just fine in 6.3V circuits; I have seen it listed as 6V and as 6.3V, and
the
5 percent difference for this tube is well within it's tolerances. If
after
all, you need to think of a replacement, there's the possibility of
using the
6L6, the 6P25, 7408, or a KT66. Eventually you might have to change a
cathode resistor a bit, but they all should give you some sound at
least.
<hr>
Next, avergnes@es2.fr (Alain Vergnes) asks for any help to find a valve
called "A258". I checked in my old AVO valve-tester book and that one's
not even listed (there's an A242 and then an A303). It sounds like it
might
be a low-power transmitting valve for use at VHF or UHF, or maybe a
receiver preamplifier valve; I'll keep on looking for that one and post
you
when I find it.
<br><img src="new.gif" alt="Latest!"></img><b><font color="red">Stop
press: My wife has
bought me a Christmas present in the form of another Old Valve data
manual from 1949, and guess what - New Information!!!</font></b>...The
A258 was
made by Visseaux and is the equivalent of the American 58 tube, a radio
receiving
valve. The 58 is a vari-mu R.F. pentode, UX6 base, Vh = 2.5V, Ih = 1.0A,
and
in other respects (except the lower heater voltage and the base) the
same as
the later 6U7G; Va = 250, Vg1 = -3V, Vg2 = 100V, conductance = 1.6mA/V,
Ia = 8mA,
Ig2 = 2.0mA.
<br>The pinout is:<br><pre>
1:h 2:a 3:g2 4:g3 5:k 6:h TC = g1
</pre>
Hope this late information helps.
```

```
<hr>
And next, Hydrosolab@wanadoo.fr asks:-
<br>
"Hello,

we try to find a pentode model 5CX1500A or equivalent.

Do you sell this kind of model and if yes, what price ?

Thanks you for quick answer.

Xavier TORNE, HYDROSOLAB"
<br>
Again, sadly, I must re-iterate that my Valves/Tubes resource pages are
not
associated with any particular business or trade activity, and I also do
not
deal personally in purchase or sale of valves/tubes. Also, I wonder if
it
is the 3CX or the 5CX transmitting tube he is after...
However if anyone else has an idea as to where to obtain such a tube,
contact:-
<pre>
Xavier TORNE,
15-17, rue Pasteur
64320    BIZANOS FRANCE
Tel/fax: 05-59-27-19-93
e-mail: Hydrosolab@wanadoo.fr
</pre><hr>
On another note, Martin Chudley (mchud@ms.com) sends me the following
interesting mail:-
<br clear=all><pre>
"Hello Trevor,
As someone who played around with old TVs & radios in my teens, I have
a great affection for valves and old equipment and still have a few
biscuit tins full of various valves. I find your pages a fascinating and
nostalgic resource.

However, despite my "A level" physics and keen experimentation persued
about 18 years ago, I'd find it really useful to have a glossary or
appendix explaining phrases such as:
  "bad contact resistance, or a resistance or reactance of just a few
ohms can cause enough unwanted signal coupling to create instability".
</pre><br>
I think you refer to any situation where an electrode of a valve in a
circuit
which should be effectively grounded at signal frequency: if such an
electrode has (though dirty pins, etc) a resistance to ground, or if it
is
wired to ground by a long bit of wire (which could be quite an inductive
reactance at the higher frequencies) then unwanted signal coupling could
occur. Think of a grounded-grid triode amplifier stage: signal in at the
```

cathode, output load at the anode. If the grid connection had a bad, or inductive, connection to ground, then some of the anode signal would be coupled back to the grid from the anode. Given certain combinations of inductance in the grid wire and capactiance from anode-to-grid, this feedback could cause wonderful oscillation at high frequencies. Finding the problem can be a nightmare - you bring your hand near the valve, holding a test probe or something, and the anode capacitance to your hand changes the whole set of parameters!
In short (excuse the pun) the attention here needs to be paid to clean connections in all circuits, and straight, short wiring in any signal-frequency circuits. Remember also: old decoupling capacitors may become dry and ineffective, giving rise to the same effects. In cathode circuits, the effect of extra unwanted resistance or dry decoupling caps is usually reduced stage gain.

He goes on:-<pre>
When I was young I subscribed to a monthly magazine called "Everyday Electronics" which featured concepts, experiments and projects using solid state components. Do you know if there was an equivalent earlier era publication referring to valve technology? And whether anyone might have made such material available on the internet?"
</pre>
Well I remember both "Practical Wireless" (complete with Henry and his comments and cartoons) and Wireless World; both still exist today, the latter now known as 'Electronics World, including wireless world'. Practical Wireless used to often have projects that you could put together using a tobacco tin as the 'chassis', thinks like RIAA pre-amplifiers for record decks, and for antenna amplifiers for shortwave reception. Short Wave Magazine, of course, had quite a few radio amateur technical articles, but was naturally surpassed by the 'Bulletin' of the Radio Society of Great Britain (RSGB). The RSGB still runs with a healthy membership of amateur radio enthusiasts and experimenters, and it's journal is now names 'Radio Communication' ("RadCom") which you can subscribe to if you join the Society. Early bulletins, and other handbooks published by the RSGB in earlier days, make fascinating reading. It should be the case for early ARRL (American Radio Relay League) publications, too.

Well thanks again, Martin Chudley in London, E14.<hr>

Next, Roger Rehr (rrehr@epix.net) asks:-
<pre>
Hi Trevor,

Do you know of any data on the UHF Power Tubes
YD 1302 or YD 1303 or YD 1304?

Thanks and 73 from
Roger Rehr W3SZ ex-AA3QK ex-WA3JYM
mailto:rrehr@epix.net   FN20ah
</pre>
Well, Roger, these valves are similar in that they are all
forced-air-cooled
trasmitting triodes for UHF work. They are of coaxial contruction: they
are
intended for the UHF TV band between 400 and 1000MHz. The YD 1302 has
a Vf of 5V +/- 5% (tight heater-voltage spec), If of 2.1A, indirectly
heated.
It has operationally a Va of 1900V, Ia of 180mA, transconductance of
60mA/V,
Vg1 of -6.6V in a video application, with 55W output into a load and a
19dB power gain. Cooling fins assist the forced airflow to cool the
valve,
and the maximum anode dissipation is 325W with an absolute maximum
seal temperature of 150 degrees C. The 1303 and 1304 are steps upward in
ratings from this valve. It is very specialized: if you wish to apply
it,
then you should contact Philips tube manufacturers of their
representatives
in your area.
<hr>
Next, James Larson asks the following:
<pre>
2 questions please

Sir- would you please suggest a couple of tube substitutions for me?
One is for a 50A1 in a Trans-Oceanic and the other is for a 1L6 in an
old Atwater Kent.

Thank You!

Jim Larson (james_l@efn.org)
</pre>
Well, as for the first one, the 50A1 is an elusive number. What would
help in seeking this valve is if you could indicate where in the circuit
it appears (is it a frequency-changer stage by the looks of it, or is it
coupled to an audio-output transformer by any chance?). It almost
certainly
has 50-volt, 0.15A heaters but tell me what base you think it is and it
will be
easier to locate this valve. The nearest I see is the 50A5, an audio
output
beam tetrode with a B7G base, or the 50B5 in an octal base.<p>
The 1L6 is a frequency-changer heptode with the following
pinout:-
<pre>
1:f 2:a 3:g2 4:g1 5:g3/g5 6:g4 7:f
</pre>
where the heater is directly-heated and is rated at 1.4V, 0.05A. Va
should
be around 90V in a mixer application, with Vg3/g5 at around 55V. There

```html
were
quite a few of these series, like the 1L4 r.f. pentode, etc. The 1L6 is
extremely similar to the DK91 with the same base (B7G) and dimensions.
<hr>
Now an enquiry from KJ6C@SHASTA.COM (Carl SEGUIN) who asks:-
<pre>
Hello. I recently found an RCA 9344 dated 1942. I have started a small
collection of tubes and I am interested in any information about this
particular tube. I have searched in some older RCA books that I have but
have found nothing. Any information you can provide would be greatly
appreciated. Thank you.
</pre>
This one is a mystery to me, I have to admit. I also have a couple RCA
books
and I looked in my AVO checker book and a couple other equivalents
books,
but I don't see this or any similar (e.g. different prefix) valve crop
up.
As I mentioned in an earlier case, perhaps you could tell roughly what
sort
of application it was in (e.g. was it connected to an audio transformer,
does
it have a large envelope, what base does it appear to have?) so that I,
or
someone else with more knowledge, can dig up the information. Sorry,
that's all
I can do right now, I'll put it on my 'difficult' list.<br><hr>

Again, as I stated above in this page, I do not deal in valves, sale or
buy.
However because I get a very large number of requests (most of which I
do
<strong>not include</strong> in these updates) I thought I would pass on
the following mail without further comment.
<pre>
From: DB4203@aol.com
Date: Thu, 26 Nov 1998 21:27:26 EST
To: tgale@xs4all.nl
Subject: Antique Radios
My father is interested in selling his collection of hundreds of antique
radios and thousands of tubes.  If you are interested please contact him
at:
Denzil R. Berry
*** (I have elected not to include the address given - <i>Trevor Gale,

tel. (304) 762-2510
</pre>
<br><hr>
Next another difficult query concerning old European valves from Joco
Henrique Melo (jhmelo@mail.telepac.pt) who writes:-
<pre>
Hello,
Is it possible to give me some information about the old european
```

```
valves:
E446, PP4101, E444, E443H, VG410.
Thank you, Joco Melo, Lisbon
</pre>
The E445 and E446 were similar, both 4V-heater types on a B5 base. They
are
pentodes with Va=200, Vg2=100, and Vg1= -2V. The E445 had a conductance
of 1 mA/V, the E446 had 2.3mA/V. E445 ran usually at Ia = 6mA, the E446
at an Ia of 3mA. They appear to be M.F. / I.F. amplifiers.<br>
The E444 was a diode-tetrode, used as an amplifier and amplitude
detector. It is shown on a UX7 base, with 4-volt filaments, Vg1 = -3, Va
= 200,
Ia = 1mA, Vg2 = 45, conductance 3mA/V.<br>
The E443 is an output pentode (audio), still with 4-volt filament,
a Va rating of 250V, Ia of 36mA, Vg2 = 240V, Vg1 = -15V, and with
2.8mA/V
conductance. It is also on a B5 base. The pinouts for these are as
follows:
<pre>
E443:
1:a 2:g1 3:f 4:f 5:g2

E444:
1:k 2:h 3:h 4:g2 5:g1 7:a(d) TC=a(tet)

E445 and E446:
1:g2 2:g1 3:h 4:h 5:k
</pre>
<hr>
The following request I had was from gp.riojano@mx4.redestb.es "Grupo
Parlamentario Partido Riojano" who kindly asked me in Spanish:-
<pre>
Soy coleccionista de radios antiguas y para reparar uno de mis viejos
aparatos,
necesito las siguientes valvulas: A-410-N(Philips), A-441(Philips),
B-406
(Philips), C-9(Radiophotos), B-9 (Radiophotos) y D-100(Radiophotos)
Si  Uds. pueden vendermelas o ayudarme a encontrarlas les quedari muy
agradecido.
  Mi direccion postal es la siguiente: Leopoldo Virosta Garoz. c)
Piqueras,85
26006-LOGROQO (Espaqa)  FAX. 941 22 88 73
                                SALUDOS.
</pre>
Please, I am sorry for not responding in Spanish, although I understand
your request. Unfortunately, I am not aware of many vendors or any other
contacts who may be able to supply you with these valves; but you might
be
able to use equivalents based on the following information:
<pre>
A410N: directly-heated triode amplifier with Vf = 4V, If = 0.06A, Va =
150V,
Ia = 3.5mA, Vg1 = -3V, base B4 with pinout:-
```

1:a 2:g 3:f 4:f

A441N: directly-heated tetrode, Vf = 4V, If = 0.08A, Va = 100V, Ia =
4mA,
with base B4 pinout:
1:a 2:g1 3:f 4:f TC = g2

B406: directly-heated triode, Vf = 4V, Ih = 0.1A, Va = 150V, Ia = 8mA,
Vg1 = -15V, base B4 pinout:-
1:a 2:g 3:f 4:f (it was also made in base 'USM4', 1:f, 2:a, 3:g, 4:f -
measure
the heater pins with an ohm-meter to check!)

B9 is the direct equivalent of A410;

D100 is equivalent to the B443 (Philips) which is a directly-heated
output
pentode, with a Vf of 4V, If = 0.15A, Va = 250V, Ia = 12mA, Vg2 = 150V,
Vg1 = -15V on a B5 base:-
1:a 2:g1 3:f/g3 4:f 5:g2
</pre>
I hope this is of some help to you. Saludos y feliz navidad.
<hr>
Lastly, I received the following from ROSENRO@mail.northgrum.com
("Rosenburg, Ron") with the following enquiry:-
<pre>
Do you have any info on the Amperex 211-D tube and the Anodyne 866 tube?
(I
thik they are for short wave) What are they used for and any tech data?
Year
of manufacture?
Any help would be greatly appreciated.
Thanks, Ron.
</pre>
Well, Ron, the 866 appears to be a U.S. rectifier tube, in a 4-pin base,
with two version available - the 866/A and the 866B. They are both
directly-
heated half-wave (single diode) recifiers, the 866/A has a Vf of 2.5V
and an
If of 5.0A, Va = 3500V, Ia = 250mA, with the pinout:-
<pre>
1:f 2:NC 3:NC 4:f TC = a
</pre>
As regards the 211-D, it is indeed an Amperex transmitting tube,
equivalent
to the HF140 (also Amperex), a directly-heated triode with a Vf = 10V,
If = 3.25A, Va = 1250V, Ia = 175mA, max full-rating frequency of 15MHz,
air-
cooled, amplification factor 12, 150W carrier output, maximum anode
(plate)
dissipation of 100W, but I do not have the connection pin-out. They are
listed in my 1954 manual, so they were made on or before that date.

```
<img src="cline.gif" alt="* * *"></img>
<p>
<font color="green">Oh, and just to show that there always
exists the possibility of mis-understanding about subject matter,
I received the following in response to my valve data page:---
<pre>
"Dear Sir

Se woo Conval is one of the valve suppliers/manufacturers in korea and
we are
professionally supply a broad range of manual and control valves to
commercial
plants such as steel manufacturing plants, petro-chemical plants and
automobile
factories.

We produce not only common valves  but also special type of valve.
nuflo is the special valve which has an actuator inside.
Due to equip an actuator, it has compact design and economic price.
nuflo also guarantee 3 times longer seat life time than other
conventional one.

If you have any question about our product, please contact with us."
</pre></font>
Not exactly the same type of 'valve' that *we* are interest in, eh? !!!

<p>
That's all for this time, thanks again to those who have passed on
comments on the page of mine, and here's to the restoration
of our old-fangled devices with things inside which glow and make you
warm *without* the fire on!
<p>
Best regards, 73's etc,
F.C. Trevor Gale (you can e-mail me at <a href="mailto:tgale@xs4all.nl">
tgale@xs4all.nl or by clicking here</a>).
Click <a href="http://www.xs4all.nl/~tgale/valves.html"> here to go back
to the
Old Radio Valves/Tubes </a>main page. As mentioned, not all the latest
info is
incorporated into the data page yet. Happy restoring and listening!
</body>

Mastr Pro paper weights? Why should I use expensive II's when the hybrid Pros are dirt cheap and last virtually FOREVER in continuous repeater service. I have a mobile one with a frequency synthesizer (non-GE) add-on in my car as well, and think they're ideal for the budget-conscious ham.

I admit I recently got rid of my Prog-Line collection, so I guess I am modernizing a bit <G>. I had both T-Power and vibrator units, but not the original dynamotor version.

Hi there! :) I am looking for the following musical equipment, working or broken, in any condition:

-old SYNTHESIZERS (knobs & sliders pref but not necessary. Moog, ARP, etc)

-old KEYBOARDS (1960's-mid 1980's)

-any MODULAR / PATCHABLE SYNTHESIZER (ARP 2600, EML-101, System 100m, etc)

-old DRUM MACHINES (Roland TR-909, TR-808, TR-606, CompuRhythm, etc)

-VOCODER

-OLD EFFECTS (filters, ring mods, phasers, flangers, analog delays, Space Echo, Mutron BiPhase, ElectroHarmonix, etc.)

-ANALOG SEQUENCERS (analog, with knobs for each step)

-MIDI gear (rackmount synthesizer modules)

-Roland TB-303 Bassline
-Oberheim Xpander
-Prophet VS rack
-Oscar monosynth
-Gleeman Pentaphonic
-Prophet 5
-Jupiter 8

Moog, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, anything similar, especially more unusual stuff.

http://members.aol.com/rolandman1

Please email me at rolandman1@aol.com if youve got anything like the above
or know someone who might. Thanks in advance, sorry if this message distrubs
anyone.

I drive a pickup and have several radios. MY problem is that when I go
into a parking garage, the garage needs to have sufficient clearance or
else my antennas will hit the supporting beams.

anyone have any recommendations for mobile antennas that work well. Some
have springs on the base.

any brands and places to get them. I checked RS and they don't have much.
HRO in Glendale was closed when I went by this weekend.

thanks

JOHN

I have an Alpha Delta Outbacker that is 6 foot long hooked to a 3 magnet
mount that works on 2 mtrs through 80 that works great and I like very much.
However, the antenna is a bit on the pricy side.

Newsgroups: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.ham-radio,rec.radio.amateur

I have a new Yaesu ft-920 HF+6M radio and have been itching to do the Tx-expand mod found at various radio mod sites. See:
http://home1.inet.tele.dk/ehh/mods/mod/yaesu/ft-920.htm

This mod involves uploading a file directly through the serial port that will supposedly unlock Tx on the full range of frequencies.

I have searched around and read the newsgroups and some have said that this mod was not intended for the US model, and that it could damage the CPU. Others have said that it worked fine. I did not actually see any posts from anyone who did the mod unsuccessfully and ruined their radio.

I would appreciate feedback/comments from people who have performed this mod to their radios, and what the outcome was. I would like to see this issue clarified once and for all.

Please, no flames.

Thanks,

Hugh

Haha, I have a 102 inch whip on top of my Blazer, the only problem that I have is cleaning the glass off the roof from overhead fluorescent light tubes. :)

Dear Sirs,

NavigatoR Ltd, a Russian company, specializes in trading Russian vacuum tubes used for air and marine navigation, radar as well as in broadcasting, amateur radio, Hi-Fi audio, meteorology, communication, medical applications and industry. All tubes are engineered and manufactured in Russia. Tube types include Broadcasting Tubes, Magnetrons, Travelling Wave Tubes (TWT), CWT, Transmitting Tubes, Klystrons, Amateur Radio Tubes, Hi-Fi Audio Tubes, Industrial Tubes, Transmitting Pulse Tubes, Modulator Tubes, Modulator Pulse Tubes, Control Tubes, High-Voltage High-Vacuum Rectifier Tubes, Cathode Ray Tubes, Ceramic Tubes, Diodes, Display Tubes, Electron Tubes, Hydrogen Thyratrons, Ignitrons, Noise Source Tubes, Nuvistor Tubes, Pencil Tubes, Pentodes, Photodiodes, Readout Tubes, RF Amplifier Tubes, Receiving Tubes, Rectifiers, Vacuum Relays, Spark Gap Tubes, Subminiature Tubes, Surplus Tubes, Tetrodes, Thyratrons, Vacuum Capacitors, Vidicons, Voltage Reference Tubes, X-Ray Tubes, and Glass Tubes.

Russian vacuum tubes have a worldwide reputation for being highly reliable and unique. A repairs facility is available for all Russian vacuum tubes and for a wide range of equipment manufactured by other companies.

Our microwave products for wireless communication systems are in great requisition.

Please, check our web-site http://www.tubes.ru/
We accept foreign orders.

Thank you in advanced

This issue can't be "resolved once and for all". As several previous posts have indicated, the sucess or failure of the mod depends on the CPU version and E-Prom Bios rev in your particular radio. Since there is no info on which versions it will work with and which versions it will destroy, the risk is yours. Take a gamble and try it, or be safe and send it to Yaesu with a copy of your MARS/CAP endorsement and they will do it for you for the cost of shipping.

(Incidentally, I have seen a post or two on the newsgroups from persons who have had damage from trying this mod. You might want to search www.dejanews.com and try to find them for yourself. However, I would suspect that most of the people who may have messed up their rigs with this mod would avoid telling the world about it by posting it here.)

As Mr. Eastwood once said "Do you feel lucky ?"

I have the same problem as I drive a full size Bronco. I know you don't want hear this, but I take my antennas off of the car when I enter a parking garage. Some of mine have springs and some don't.

Good luck ...

Mike

I am taking my test in a few weeks but already have a Radio Shack portable hand held radio for 2-meters. Since I'm told it is not strong enough to hit any repeaters in my area (Long Beach, NY) without a roof antenna... I have a ham/scanner antenna which is meant to be mounted on a car roof (magnet mount). What is the maximum distance I can hit a repeater without being too noisy? And will it work effectively since it is not mounted on a magnet (it's just stabilized to the roof, no metal)? Thanks

Rob

I guess you have to ask yourself, why do you want to do the mod, and will/can you use it once it's done, and if it works? And remember the old saying... "If it works, don't fix it!" The FT-920 is a super radio... you don't want to screw it up.

Keoki wrote:

> $$MAKING MONEY$$ Posted by WILL on December 20 at 08:53:09 I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. : Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT! Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. : It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery! Let me tell you how this works and most importantly, why it works. Also, make sure you print a copy of this article NOW, so you can get the information off of it, as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success:
>
> STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place

> one paper in each of the 6 envelopes and seal them. You should now have
> 6 sealed envelopes, each with a piece of paper stating the above phrase,
> your name and address, and a $1.00 bill. What you are doing is creating
> a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate
> service and you are paying for it! Like most of us I was a little

I have a Yaesu FT-230R mobil 2-meter rig that has the creeping crud
LCD-itis, and of course, Yaesu no longer stocks the part. I need
either:

1. A dead FT-230R that still has a clear LCD
2. An alternate source for the part (not likely, I know, as these things tend to be custom). The
    number etched into the glass is H1313-0. Maybe the 430R uses the same display?
3. Information from anyone who has adapted the rig to use 7-segment LED's.
4. A copy of the schematic of the display circuit, so I can attempt #3 myself.

Thanks in advance for any help that anyone can provide.

You should be happy with the Radio Shack unit. Although many don't care for the fact that those units can't listen "out of band", it does offer some advantages. The receiver is much more "selective" than many of the other hand held units. Many other brands of radios are easily overloaded by nearby or high power transmitters on other frequencies, such as pagers, 152 MHz radiotelephone, etc. - this is known as "intermod". Next time you're in the downtown core of a city, connect your antenna to an external mobile antenna, and later try a friend's handheld in the same area. Listen to the crud coming across the other radio compared to yours, and you'll see what I mean.

> Since I'm told it is not strong
> enough to hit any repeaters in my area (Long Beach, NY) without a roof
> antenna... I have a ham/scanner antenna which is meant to be mounted on
> a car roof (magnet mount). What is the maximum distance I can hit a
> repeater without being too noisy?

There is no absolute value of distance for a particular setup. Issues such as terrain and the performance of the other station or repeater you want to communicate with will determine that. If there are large obstructions such as hills or large buildings in the direction you wish to communicate in, your performance will suffer. Not all repeaters perform to the same degree.

You will find you can hit some repeaters in a particular distant location, but not others. You have to take steps to optimize your station, and take what you can get for coverage in any specific direction, or to any particular repeater.

> And will it work effectively since it is not mounted on a magnet (it's just stabilized to the roof, no metal)? Thanks

No, its performance will be degraded significantly without a mass of metal beneath the mobile antenna. You might not notice it on receive, but for transmit your coverage will suffer greatly. Fortunately, fixing it up to perform reasonably well is easy. Find yourself a stiff piece of metal about 4 inches wide and about 8 inches long. Bend it into an upside-down "L" shape, and mount the antenna in the center of the flat top part. Drill four bolt holes in each corner of the flat top part and connect a 10 or 12 guage wire to each bolt by wrapping the bare wire end around the bolt just under the bolt head and tightening it down. The wires should be a minimum of 19 inches long. you now have a sufficient "ground plane" for acceptable performance. With screw holes drilled into the vertical part of the bracket, you can mount it to many surfaces. I use a similar arrangement to give me an extra outside antenna when I'm not using my mobile mag-mount on a vehicle. When I want to take it somewhere, I just pluck it off of the bracket and put it on the vehicle. The performace of a PROPERLY CONSTRUCTED mobile antenna on a GOOD ground plane will perform the same as a base antenna at the same height, and you can avoid paying the obscenely over-priced amounts for the flimsy aluminum crap that's sold for home use today.

You might wish to construct a directional antenna to increase your coverage area. If you need only improve your performance in one direction, you can fix the antenna in that direction, or you can purchase an old TV antenna rotor at a yard sale or Hamfest. I constructed the Quagi antenna when I was in my teens, and I still have it. It is a competition-grade antenna that has been used in satellite work and contesting. It is connected directly to the coax cable, which eliminates the difficult to properly construct and adjust matching section on Yagi antennas. It also uses easy to obtain parts - a wood boom, house wire for the loops, and welding rod for the directors. For FM work, mount the antenna so that the director elements are vertical, and the coax connection is at one of the sides of the loop (not the top or bottom). See the newest design at: http://web.wt.net/~w5un/w5unqu97.htm

You might also wish to purchase an amplifier to raise the output of your handheld to the 25 - 50 watt range of a normal mobile or base radio. You must first be able to hear the distant station well with your present setup in order to communicate with it using the amplifier, though. With a low-power hand-held radio, you will not be able to communicate with all the stations that you can receive, because of the output power difference.

Comet, Diamond and Cushcraft all make 2m and dual band mobile antenna that fold over but it requires getting out and manually "tipping" them over as well as resetting once you leave. Diamond or comet one also make a fair dual band antenna about 17 in tall which may help. Overall they didn't build those garages with us in mind. Try getting an ambulance or fire truck inside......... Many cities now have a modified brush buggy with stretcher attachment for such details.

You ought to look into the Alpha Delta Outbacker mobile antenna. It works on 2 thru 80mtrs. That way you have the best of all worlds. I have mine on a 3 magnet mount with a foldover device screwed into the magnet base. To change bands you just move the cable (which has a banana clip on it) to the desired band you want. I have worked all over the US on 10 thru 80, and have had no problems working 2mtrs.

We, RT Systems Amateur Radio Supply, have seen numerous radio that were
damaged by using the software that was found the internet.  The usual
charges to repair the damage is $160.00 plus shipping.

We can do the mod for you for $30.00 plus shipping.

Not only that, but some of us have ISPs that remove this crap from the
newsgroups, but not when a replier reposts the whole thing. So we get
to see what we missed, courtesy of a well-meaning friend. ;-)

For what it's worth Rob, I use a "Radio Shack" disc-cone antenna which is
mounted atop a 20 foot pole in my back yard. I paid about $85.00 Canadian
for it. I can work 90% of the repeaters in my area (Edmonton, Alberta,
Canada) the farthest of which is out about 25 KM (15 miles) away. I can also
work the local packet networks with it. This is all done with 5 watts of
power.

Lew Barnett
Edmonton

Hello!
Does anyone have a experience of using ICOM's microphones SM-20 and SM-8?
Which one give better signal quality? I guess use it with IC-756. May be
exist better choice instead of ICOM's microphone for that TRX?

Thanks

Oleg

I use the Heil HM-10 (toggle switch between element #4 and #5). I nearly always get good audio reports when used with the 756. I do not use a mic pre-amp as I find the mic gain on the 756 is sufficient. This was not true with the 726. A pre-amp is necessary. All of these low end stock mics will do the job. To get studio quality super audio you have to use mics that cost as much as the rigs. I don't really see the point on side band unless you have bucs to burn!

CHECK OUT MY WEB SITE FOR FULL COLOR PICTURES and SHOTS OF THE EXTENDED WARRANTY ...
...go to http://www.mhtc.net/~todjk/DX394/

Here's the story.

No gimmicks. Just the need for an honest guy to sell a good piece of radio gear.

My DX-394 been sitting on my amateur radio desk for 12 months now. I originally bought this radio to help me study code when studying for my Technician Plus 5 wpm test.

Since I passed my test, I purchased an ICOM IC-746. Thus there's no need for the DX-394. The DX-394 has served it's purpose. In reality, this unit was barely used for approximately 6 hours. Truthfully.

There's absolutely nothing wrong with this radio. There's not even a scratch on it. IT IS IN PERFECT WORKING CONDITION. I wouldn't want to sell it if it were second rate, broken, or junk. No one likes to be led on to buy crud.

To boot, there is still time left on the 5 year TSP Warranty. Warranty card and sales receipt will be included with purchase.

If you are interested in purchasing this radio, please e-mail me below OR call me after 5pm central time at (608) 326-5539.
todjk@mhtc.net

I guess RT Systems (CB Supply?) Amateur Radio Supply just needs the money
and no MARS/CAP on file.
Be clear in the N/G's.

Hi,

Price reduced to bottom dollar... selling FT-900/at in pristine condition
for $725 plus shipping. Radio has built in tuner, keyer, and not a scratch.
Never mobile. '95 manufacture. sorry, no xtra filters or seperation cable.
.30-30 rx plus MARS/CAP. Works great and puts out around 110 watts.. Must
have prepaid money order on this one. includes hand mic, box, manuals,
orig. factory paperwork, reciept of orig. buyer from AES, etc.
thanks for the time!
Randy

Hi there :) I'm an electronic musician *seriously* searching for:

Old synthesizers and keyboards. �
Old drum machines.
Old sequencers
MIDI equipment (rackmount synthesizers, samplers, etc.)
Effects processors
Old vocoders
Roland TB-303 Computer-Controlled Bassline
Roland MC-202 Microcomposer

In general, I'm looking for working or broken instruments made in the

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and

especially ~PATCHCABLES~. The more unusual, the better.

Hello, Oleg

I'm using an SM-20 with my 756, and get good audio reports. I did some on-air comparisons with the stock hand-mic, and a couple other mics I had lying around here, and the SM-20 was a clear winner. But I do not have a SM-8 available for comparison. I don't think I would have spent that much money myself, but it was a Christmas present from my wife. Besides, it looks nice.

Where'd ya get the 900 Mhz Scope, and how many Thousand Dollars did it
cost ya?
I've got a real nice dual trace scope from Sencore, but it's only good
to around 140 Mhz. Anything above that it won't see!

>Really? I always thought that was the highest frequency that it would display a
>single
>cycle of a sine wave. It should show an indication of RF way above that. Probably
>even at 900mc.

The bandwidth rating of the scope refers to the amplitude of the signal displayed, not the sweep speed (and thus how many cycles will be visible).

If a scope is rated at 100 MHz, it means that the frequency response of the scope is 3 dB down at 100 MHz. That in turn means that a 100 MHz sine wave will be displayed with an amplitude that is too small by a factor of 1/sqrt(2).

Even higher frequencies are displayed at further reduced amplitudes, but the spec doesn't necessarily say how fast the vertical response of the scope rolls off. Since there are multiple stages involved, and all of them are likely to start rolling off at some frequency, the ultimate slope of the frequency response curve is likely to be much steeper than 6 dB/octave (what you'd get with a simple low-pass filter).

So a 100 MHz scope will likely still display something at 200 MHz (though it may not trigger on it). But 900 MHz may be totally invisible.

Dave

Really? I always thought that was the highest frequency that it would display a single
cycle of a sine wave. It should show an indication of RF way above that. Probably
even at 900mc.

Forsale:
Kenwood SW-100B Power/SWR Meter. For 2mtr-70cm.
Measures 150w out from 1/4w-50w in fm - ssb. Great for
home or mobile with ac internal light. A real nice meter. It's
in mint shape. Included all original docs, manual, box & etc.
Works great... Price $60/obo + shipping.

Hi Herb,Just curious. How would doubling the voltage change the crystal based oscillator frequency? Also how would doubling the voltage change the 1200 Baud Bell
Standard modulation scheme to the CCITT based 2400 modulation scheme.

On the other hand if we reduced the voltage from 5 to 1.25 could we use the modem for rtty? ;-)

Me thinkuth you are tugging our leg.... (grin)

WTB: ARRL Advanced Class License Manual - the one that's good thru 6/30/99. I'd like to take the test before then, so I need one with all the pages in legible condition. This may be your last chance to sell yours. The ARRL wants $17 including shipping...Give me a price for yours mailed to me in Texas. Please respond by direct e-mail since I may miss a post in this newsgroup.

Does anyone have the 10 Meter mod for the Ameritron AL-811. I never remember to write Ameritron for the Mod. Ten metere is opening up nicely to europe and the exter power would be nice to use. Anyone that can help I would appreciate it.

John;
All companies are still maintaining some security around this modification.
It's
for a good reason, some of these amps are still finding their way on to the 11m
Band. I appreciate your desire to complete this change as quickly as possible,
but most hams are not willing to bridge this securuty. We all went through the
process to get the job done. 73 and good luck.
Dave WA0ZZG

Hi folks :) Need some $ for the holidays? Read on....

I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's   Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders   Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

-Roland TR-808 Drum Machine

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

-Pearl SY-1 Syncussion

-E-mu SP-1200 Sampler Drum Machine

-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-Roland Space Echo RE series
-Compu-Rhythm
-Gleeman Pentaphonic
-Roland Jupiter-8
-Roland System 100m
-ARP Avatar

If you have any of the above OR SIMILAR for sale or know someone who might,
please email me at rolandman1@aol.com

and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

The mods are usually simple , but what do you need with an amp on ten? I think
100 watts will do the job if the band is open
and a kw won't if the band is dead. aa7qa mike

I dunno.  It was very easy to tell who had the KW's and who didn't on the
receiving end of a pile-up.  The IT's seemed to run a -lot- of power.

Does anyone know how much power the exciter in the GE Master Executive II
puts out? Also what is the input power range of the PA deck? Please E-mail
me direct at: mjs@nolnet.net

Thanks

Mike

LKOJ-

I think the 9100 is the one I have. It is a digital phone, but NOT spread spectrum. I found that I could pick it up on a cheap counter that goes beyond 1000 MHz. As I recall, it has several frequency pairs that can be stepped-through.

No doubt your attempts to detect the signal were with instruments having no useable response at 900 MHz. After counting the frequency, I attempted to receive it on a Tandy Pro-2006 scanner. I wasn't able to detect it. I suspect the modulation spectrum is so close to white noise as to sound like an open squelch on an empty channel. I was able to receive another analog phone, which used the same frequency pairs as the 9100.

If you succeed at extending the range, you may run into similar problems found with the old 47 MHz analog phones. If you make it work at a greater distance, you increase the probability that another phone will be within its range. You may not be able to hear the other phone due to the digital coding, but the channel can be blocked. As population density increases, more channels might be blocked by other phones.

The exciter puts out 250 milliwatts and I have put up to 1 watt into the PA
deck for extended periods with no trouble.

Hi....
I have a TR-7950 that won't transmit (everything
else works fine). The problem is the PLL UNIT #x50-1900-10.
I verified this by borrowing that particular board, out of another
7950.
So.... I need to find myself another board with the above part
number.

===Anyone have a junker or parts 7950 out there ?????====

The board I need is the one on the bottom of the radio, at the back.
It's part # is PLL UNIT x50-1900-10.

I'd be willing to pay $30.00 for one of these boards in working condition.

email me if you can help....

Folks,

I've tried a similar experiment with my 9100 ATT phone. In my case, I

used the extended receive capability of my ICOM ICW32A HT to listen for
the signals. They do, in fact, sound like static when received on an FM
rig. By pressing the channel button on the 9100, the phone could be
made to jump up in frequency by some standard increment each time it was
pressed (it may have been 100 khz, I don't recall). I didn't take it to
the limit in order to find out how many channels were available.

I tried something similar with a 900 MHz analog phone from GE.
In my case I
was interested in ham radio possibilities, since it already transmits FM in
the 900 MHz amateur radio band.

I found that the RF module was controlled by a serial interface to a
microcontroller. I put a logic analyzer on the serial lines and figured out
how to prevent it from changing channels (I think). The next step was to
make my own microcontroller do the controlling. Due to several reasons
(being lazy was one of them) I didn't get past that point.

I have a 9100, as well as a newer Toshiba phone based on what appears
to be the same radio. I looked at the output of the telephone on a
spectrum analyzer, as well as looked at the radio deck. The 9100
uses a Motorola MC3418 CVSD chip for analog-to-digital conversion,
and the resulting data stream (something between 30 and 40 kbits/s)
is sent using wideband direct-FSK. RF carrier and LO signals are
synthesized, apparently using a 150KHz reference frequency (judging
from the channel step and apparent reference-feedthrough spurs).

The resulting signal is over 100KHz wide, most NBFM receivers (scanners)
won't notice this at all, though an RSSI circuit (S-meter) may indicate
the presence of a signal.

Technically speaking, this is not a spread-spectrum signal, it is really just a wideband FM digital radio, and it most certainly does not appear to be encrypted. If you were clever, you could buy an MC3418 chip and build a decoder, along with a wideband FM receiver. Practically speaking, it does make the telephone virtually impossible to intercept.

Using a spectrum analyzer, I'm certain I counted 10 channels,
and the telephone manual/box might even specify 10 channels.

I previously posted that the channel step was 150KHz, and I
recall now that it may have been 300KHz, but the synthesizer
operates with a 150KHz reference. Now that I think about
it, I'm pretty sure this is correct. While I did not record
the actual frequencies, I'm fairly certain they're on a 50KHz
boundary and step by 300KHz.

I am leaving the hobby.. Below is my list of items forsale and
I have more not listed that would be better coming to my qth
to see if you want to purchase.. Basically I'm cleaning house!
Tnx 4 reading my post Thom j.

Items sold are marked as: *SOLD!!* Or might be *SOLD??*
[A]  *SOLD??*
Forsale: AR-270B 146/446MHz  5.5/7.5dB 7.7' Never used but
assembled. Cost new $100 Price $65/bo w/pl259 connectors &
coax included. Dont want to ship since its already assembled and
tuned.. I'm in Burlington {Southern} NJ across from Phila, Pa.
[B]
All Forsale:
1st Item ; Astron 15amp power supply never used. New $80
asking $50/bo. Cant not ship.
2nd Item: Astron 35M power supply never used. New $169
+ tax.. Asking $130/bo. Can not ship. *SOLD??*
3rd Item: MFJ-931 Artifical Ground. Never used New $80
asking $50/bo + shipping  *SOLD!!*
[C]   *SOLD??*
4Sale "Glen Martin Roof Tower, Thrust Bearing & Heavy Duty!"
Aluminum Mast Price & Specs New from Glen Martin are below:
#1; New Glen Martin Roof Tower, Specs & Price...
Model: RT-424,  Height: 4.5',  Shelf to top: 34.75,  Base width 24�,
Max Ant. in sq ft @ 87mph@6 / 100mph @4.5 / 112mph @3.6,
Max Ant load: 100lbs   Weight: 18lbs    Price: $162.00+ Shipping
#2; New Glen Martin Heavy Duty Thrust Bearing, Specs & Price...
Thrust Bearing for rotating setups, premium quality, weatherized
```

twin bearing for 1.3 to 2.6 mast diameters. TB-25 Price: $89.95
#3; Glen Martin Heavy Duty Aluminum Mast, Specs & Price...
MA-2069 106" X 2.375" OD ,.145 wall aluminum hvy duty 12 lbs
$108.00 New Price for all $359.95 + Shipping and Un-Assembled.
Everything is like new and completely assembled. Asking $240/obo.
Must Pickup! Qth Burlington, NJ. I'm about 10 miles S. of Trenton
& 6 miles N.E. Of Phila, Pa.. Email or Call 609-386-9382 Or
if busy Call: 609-386-3272 {afternoon's only please!!}

[D]

Forsale: Both New never used One MFJ 1272B & One 1272BX microphone/tnc switch box. Includes all original info docs, manual, & etc. New $39.95 each + shipping or sales tax. Asking $20/obo each + shipping...

[E]

Forsale: *SOLD!!*

Kenwood SW-100B Power/SWR Meter. For 2mtr-70cm. Measures 150w out from 1/4w-50w in fm - ssb. Great for home or mobile with ac internal light. A real nice meter. It's in mint shape. Included all original docs, manual, box & etc. Works great... Price $60/obo + shipping.

[F]

Forsale; Star Micronics. NX-2420 Color Printer

With tractor printing. Includes complete users manual, printer guide, tractor paper, printer cable, dust cover & extra printer ribbon. It is scratch free & works great. It is as close to new as it can be. Price $65/obo Must pick up! You can see how well everything looks & works. Will include like new printer cart/table for a few extra dollars.

[G]

Forsale: Wood Computer Desk/Cart with sliding printer draw + sliding keyboard draw. Nice compact cart/desk with rolling caster wheels. Condition Fair-Good. A nice computer/printer desk/cart for a student or small area. $55/obo. Must pick-up.

[H]

2 meter Cushcraft 8elem {ssb or fm} beam with 50ft coax, RadioShack rotor & control box $80/obo for all.

[I]

Antron 99 with radial kit, 34ft telescopic mast w/ guy wire attachments & 50ft of coax. $50 for all. Mast needs good cleaning! The Antron 99 works great!

[J] 'Uniden Bearcat BC 590XLT' scanner. Has all bands ham, wx, fire, police air & tech opened for more.. Many features 'i.e. 100 programable memories, scans all band ranges, instant scan wx, fire, police, air & more. Manual and antenna included $90/obo Like new.. No 900mhz

[K]

Finally.. I have coax jumpers, guy-wire, L-N connectors, elbow connectors, 8x coax, plus other computer extras & more. This is something you should look at and see if you need any of it or not. Rather sell than have all this just sit.

If you see anything or want to come here please re: me or

call (609)386-9382. If busy call (609)386-3272 [please
afternoon's only!! Ederly mother is very ill]

I have manuals but cant part with them. I need model numbers and can scan the realtive pages and e-mail them. Duplexing requires altering the switching circuits and the antenna relay. Not very hard to do.

A non-ham friend acquired 9 GE master mobiles,and 2 bases,
all 6m with tube finals. What can I do with them,and where can
I find useful information on them? Tho owner really wants to put
these into service.(I might make one into a 6M Amateur transciever).

Hi there! :) I am looking for the following musical equipment, working or broken, in any condition:

-old SYNTHESIZERS (knobs & sliders pref but not necessary. Moog, ARP, etc)

-old KEYBOARDS (1960's-mid 1980's)

-any MODULAR / PATCHABLE SYNTHESIZER (ARP 2600, EML-101, System 100m, etc)

-old DRUM MACHINES (Roland TR-909, TR-808, TR-606, CompuRhythm, etc)

-VOCODER

-OLD EFFECTS (filters, ring mods, phasers, flangers, analog delays, Space Echo, Mutron BiPhase, ElectroHarmonix, etc.)

-ANALOG SEQUENCERS (analog, with knobs for each step)

-MIDI gear (rackmount synthesizer modules)

-Roland TB-303 Bassline

Moog, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, anything similar, especially more unusual stuff.

-Roland MC-202 Microcomposer
-Roland VP-330 Vocoder
-Roland Jupiter-8
-Sequential Prophet VS rack
-Sequential Prophet 5 with MIDI
-Oberheim Xpander
-Korg MS50

Please email me at rolandman1@aol.com if youve got anything like the above or know someone who might. Thanks in advance, sorry if this message distrubs anyone.

I have the following for sale, All items are in good working order. I would prefer Postal Money orders only or Postal COD.

PPProducts, RF bug detector, model #P7040, works great, read RF fields via bargraph or speaker(tone) or both, with stubby
antenna, works on 9V battery(included), with instructions, great for RF sweeps,

from 5-2000MHz, sell $75.00

YAESU VX-1R, Version A106, received as gift, I already have one, all original equipment, i.e. antenna, box, manual, charger,
strap and warranty card,ADMS-1D software and cable... will sell for $220 plus shipping

GE portamobils, set of two, no antenna, units power up, they come with chargers/ handsets, low band
VHF, two channel 46.8/46.9 sell for $50 pair plus shipping

Color CCD dome camera, 12VDC input, NTSC color video output, great picture, photo upon request, great for
surveillance, $150.00

Magnavox, front/real video/audio input 14" COLOR NTSC monitor, works great, used with above camera, sell $50 plus shipping

BW Board camera(CCD), pinhole lens, 12V input, NTSC output via RCA jack, very small, 1.25" square by .75" deep, sell $65.00

BW board camera, same as above, mounted in PIR detector, sell $75.00

BW board camera with zoom lens, adjustable focus mounted in plastic box, unit comes with power supply and 4" BW LCD video
monitor, both units run on PS included.
Adjustable contrast/brightness - pair for $150.00

1/3" BW board camera C mount, with computar 75mm lens(c-mount), excellent picture, sell for $145.00 obo

I can take photos of all items if need be, e-mail me with questions..

No it won't ,It's about MastrIIs ,mine is the older Mastr (with tube
finals and driver)

That limits it to two series of GE mobiles. Yes, they are very confusing
at times, and I work with them daily. The Mastr if a black case with a
footprint
about a foot square, is as far as I know referred to as a "Mastr Exec" There
was a later version of this with Solid State PA called the Mastr Exec II
line.
(its case color is beige, similar to the Mastr II line)
The is also the MASTR Pro that came out after the Progress Line (which was
all tube). It is in three sections - RX, PS,TX - and is dark blue in
color. The

Royal Exec is physically similar to this as well, but is all solid state and
low
power -- only if I remember correctly, which I may not.

I will not even mention the TPL, or "Transistorized Progress Line" which was
a very buggy early solid state design.

The answer to your question - the conversion to 6 meters can be done,
but is best if the radio is of the correct split. I may have some info
around
on some of the older units if you will give me the Combination Number on
nameplate of the radios.

Sounds like them all solid state ,except the PA final and driver tube.

The bases are blue, and have the mobile chassis in them, but with AC
supply.

Hi All. I'm looking to get involved in 6 meters and need a radio. I have AT&T 486 DX4/75 mhz laptop with color screen, 20 megs ram, 540 meg HD, 33.6K modem, WIN95, etc etc. Great little machine with leather carry case. Will take $350.00 for it or trade for radio equipment.   Thanks.

Hello Friends,

I am looking for a copy of Operating Manual for Yaesu FAS-1-4R,

Remote Antenna Selector.
I'll pay for the cost of copying and postage.
Or just give me the description of 4-pin connector.

Thanks for reading. 73 Robin

Hello there,

Please help me find the schematic diagram for Avantek pre-amplifier.
Model # is AK-400N and it covers 200-400 MHz.
I need to fix it for my 220 repeater.
I'll pay for the cost of copying and postage.

Thanks and Happy Holiday!.

I said no further communication and I meant it. Oh
well. Guess you better start filing an action in small
claims court. You waited six months during which
time you never said you wanted the antenna after
I told you to tell me when you wanted it and I would
get it down. Then, you apparently either got a better
deal on another antenna or simply decided you didn't
want mine. During that time my antenna was off
the market so I'm out the interest on my money for
those months as well. If you weren't such a jerk
we could have settled this without a problem but
since you chose not to do so then you'll just have to
bear the consequences.
No further correspondence from you will be read.
Merry Xmas
Tony N7BG

Hi there :) I'm an electronic musician *seriously* searching for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's   Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders   Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

-Roland TR-808 Drum Machine

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

-Pearl SY-1 Syncussion

-E-mu SP-1200 Sampler Drum Machine

-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-Space Echo
-Oscar monosynth
-Gleeman Pentaphonic
Maplin Patchable Synth

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com

and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

Just follow through and take him to small claims court.  Ask for the $100
plus any expenses such as the filing fee that you can claim.

I'm looking for the 75 HZ- Filter for the
communication receiver SIEMENS-CHR531.
Who knows somebody, who own this
receiver and maybe sell the a.m. filter.?!?!?
tnx, vy 73, Franz, DD3FMA

Effelsberg Radio Observatory Disclaimer (11/2/1998):

The 100-m radiotelescope is currently not involved in SETI research.
Statements to the contrary and claims of recent detections and imminent
announcements are false.

Hi Bill,

I'm looking for the same URL info - so far the NG leads nowhere.

If you have acquired your desired info I would appreciate help in this reguard as well.

Hi there :)
I'm an electronic musician seriously searching for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment (MIDI and pre-MIDI).

In general, I'm looking for working or non-working instruments made in the

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~:

The more unusual, the better.

_ANYTHING SIMILAR!!

Also looking for old publications on electronic music, magazines, product brochores, other information.

If you have any of the above or similar equipment which you'd consider selling or know where i could find some, please email me at rolandman1@aol.com

If you'd like to, please include your phone # since my email has occasionally been unreliable in the past.

Thank you very much for your time and I apologize if this message annoys

anyone.

Hi. I'm interested in possibly getting a 2m FM QRP kit(to make a portable radio), covering two repeaters, 145.35 and 147.3(of course including -600kHz and +600kHz input frequencies). First I need to know prices for a kit like that. Reply to e-mail k3drq@qsl.net

I have several Collins 208U-3 3 Kw 2-30Mhz RF Amplifiers. These are in good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to produce 3Kw PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to tuneup.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3ph power and the room one of these superb Amplifiers would make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $3000.00
Untested with a tested and guaranteed 4CX3000A $3,500.00
Tested and Guaranteed 100% complete $4,500.00

crating by a professional packer is $300.00 additional.

A complete service manual is included at no charge.

If you need more info please contact me.

I received a new TM 261A today and need some help with TX on my business frequency for which I have a license. I cannot find the mod for TX on 152.XXX. Can you help me with that? I did find the Mars/Cap mod, but I do not know if that mod will go high enough. That mod said cut the W2 green jumper wire. There is a similar W1 green jumper wire right beside the W2.

I am also looking for the TSU 8 CTCSS tone board. If you have one for sale please email me.

Thanks,

joe

As far as I know all of the persons that say they receaved the signal found it to come from the same direction in space. So, if it is true - I beleave so - it must originate reasonably far away from earth to look as if it came from the same point as seen from the US, UK and Japan. Of course it is man made but far away from earth. This is what puts all of this story into perspective. Please read my post "SETI signals are from terrestrial space probe" and comment it scentifically and with a open mind.

Good Oservations

Ricardo Nunes

The County that I work for is presently soliciting bids for a new 800 MHz trunking system. They have received one which they say is very favorable from EF Johnson/Transcrypt of Nebraska.

I would like to hear any positive/negative comments on this company and any links to reports of their un/successful system installs.

Thanks.

This page has come a long way. We have now added a Hamfest calendar so you can post your hamfest which will list by state, day, month, year, etc... We will link to your page that describes your fest or we will build you a page for your fest. This is a FREE service, that's right, no charge!!! We are trying to create a great interactive site for all hams to benefit from. Come by and check out our stuff!

http://vartel.com/kt4vq.htm

If you are looking for a great tradersnet, this one is growing strong. I personally am surprised at the traffic hits that we are getting from all around the world. If you would like to see the different parts of the world hitting this page come on by.

It would be nice if people would put Ebay in the subject header so those
of us who don't care to frequent an Ebay offering could avoid reading
the message all together.

Hi

My Sandpiper antenna fpr 144/430mc, that was scotched on my cars backwindow
has fallen down and was damaged
now I am looking for a store to get a new one.
here in HB9 there are no more dealers selling such products

can anybody help me please

Better yet, simply add the poster's name to your kill file. Then you'll
never see another E-Bay post (or any other type) from that person again. If
enough people use this method of "banishment" it will eventually stop the
posting of E-Bay adds on the newsgroups (providing the E-Bay posters have
any interest in posting other types of messages on the newsgroup).

Better yet, simply add the poster's name to your kill file. Then you'll never see another E-Bay post (or any other type) from that person again. If enough people use this method of "banishment" it will eventually stop the posting of E-Bay adds on the newsgroups (providing the E-Bay posters have any interest in posting other types of messages on the newsgroup).

I agree with the subject line FA, however I appreciate the fact they are allowed here. I have found a couple treasures there.

Apologies accepted except that the original posted URL is incorrect.

You posted          http://vartel.com/kt4vq/htm

But it should be    http://vartel.com/kt4vq.htm

By the way, it looks like a nice site.

Martin

-- HELP!!
      I am in need of some help, regarding a base radio, i have just =
acquired.  This Mastr Radio made by General Electric, was used
previously by our local ambulance, tuned on 158.760Mhz.  I am in need of =
a set of manuals for it. and if anyone has information
on making this rig full duplex would be appreciated.   I also have an =
Interconnect for it...CS-700 Model. Crystals anyone?
I would like to use it for local Repeater, or the very least tuned for =
rx & tx on a specific repeater tuned on rx:146.310Mhz tx:146.910Mhz

73's
Randy Molyneaux

Have for sale a Kenwood YK-88SN-1 filter. This is the narrow QRM-killer
1.8khz filter for the 8.830 IF in the TS-450s/690s and other Kenwood rigs.
The fellow buying my rig has all the filters he needs, so this one must be
sold separately.
Asking $95. o.b.o. shipped conus. 73, DavidC AA1FA 603-894-1174

This is the last day for this auction. I'm selling my tried and true 520se with the optional 500hz cw filter installed. Rig is in good cosmetic condition - (some light scratches on the case, face is very good), and excellent operating shape. With manual. Only reason it's leaving is that I just bought a new radio (TS-570D) and wife says if one comes IN, then one goes OUT! (hi, hi). Nice first hf rig, or as a backup. Very fine transmit audio - like most of the tube kenwoods always get great reports on the sound. And the cw filter is great for picking a signal out of the qrm.

So it's on EBAY thru tonight (11/13). Currently at $250. I have a $275 reserve, but have decided to sell for $250 or above plus shipping.

Not trying to be price police or anythig like it. But it seems to me one
can buy a real nice DSP unit for the same price. I own all the same
equipment and do not find anything special about the filter except the
only way to find it is used.

Questions:

Can you recommend the best web page or site for individuals
interested in learning more about ham radio?

What prerequisites does the FCC require before an individual
receives licensing?

Do I need to attend a "workshop?"

If anyone can help me learn more, please let me know. I
am anxious to start.

Thank you!

I think, you'll find just
about everything here or at
the http://www.arrl.com

http://www.ac6v.com/pageas.htm
l
there's thousands of web pages
on ham radio, this should give
you a start.

A number of individuals sent private e-mails to help me in a
quest to learn more about ham radio. The information was {and
still is} very helpful. I appreciate the replies.

Thank you!

Try   www.arrl.org

That's the home page for the American Radio Relay League (the nat'l organization for amateur radio operators). You can find info there concerning what it takes to get a license and the many different aspects of ham radio.

You can also go to your local Radio Shack store and buy "Now You're Talking!" It's a sort-of take-me-by-the-hand-and-lead-me-through-getting-my-license book. Has all the questions on the tests (Novice and Technician written exams) and explains the answers.

Good luck and 73 (best regards)...

Has anyone seen that cube style radio Radio Shack used to put out with
push-button access to WWV's audio time broadcast? Anyone have
anything similar? Badly needed item :) Suggestions appreciated :)

Hi all,
I'm looking for a Kantronics KAM +
OR

An Enhancement Board to upgrade my older type KAM to a KAM +,must be Firmware version 7.1 or above.

Please Email me with details.

I remember those. I don't know of a dedicated radio like that manufactured today but you can of course by a shortwave receiver for as little as $80 or so. Used radios at yardsales and certain chinese models can be had for around $20. Also, this company makes clocks (and wristwatches!) that callibrate themselves automatically to the WWV radio signals:
http://www.synctime.com/

You may also try this link, if you just need to know the time:
http://tycho.usno.navy.mil/what.html

You *may* be able to find a kit for a dedicated WWV radio...no better way to search than the Internet.

Howdy

I recently passed parts 2 and 3a, so recently in fact I don't know my call sign yet, and am beginning the search for a rig. My interests, at least for the time being are 10m, 6m, 2m, 70cm, and maybe 1.5m. The only gear I've been able to locate that is capable of this is the Yaesu Ft-847. While not out of my price range, it is quite expensive. I was wondering if anyone could suggest gear that was a bit less expensive.

thanks

larry

Dear OM's and YL's
I got a used Ten-Tec OMNI D and i'm vy satisfied with it, except the strong chirp cw signal. Other OM's told me, that it's normal for this rig, which was build in about 1977 but i think, that cannot possible, because the original advertisement text says, that this rig has a very clear cw signal. Since I'm not a vy "technical" OM I ask you, if you have any experience with the a.m. rig or any idea, how to improve the cw signal.
Thank you vy much in advance.

It's not normal. TenTec rigs are noted for being great sounding CW rigs.
I would check the power supply first. Watch the voltage with key up and
key down. If there is a large change there may be a regulation problem,
or you may need a bigger supply.

LARRY
    I had the same question when I started . What I enden up with was a
Ranger 2970
 Using a mfj on six The mfj was $159. but it was 10 wats and the mfj 3
element beam was $ 69. My 2 meter was Radio Shack and it is still used in
my wifes car.
    That worked until I got my 570s . They are being used by some one else
now
and if they get something else it will be a backup again . Just a though.

How 'bout those digital table clocks sold everywhere, (except I haven't seen it in Radio Shack), that have the WWV receiver built in and autocorrects the clock. You cannot hear WWV, but it MUST be able to get that data stream sent at what, 100 baud? Mebbe an amp could be added and the audio extracted.
I have even seen them in Service Merch, and Brookstone.

```

Hmmm.... interesting idea! Actually this makes some sense, now
if I could just find a cheap one to experiment with or better
yet it seems that I have seen plans on how to build a cheap
WWV receiver. Does anyone know where I might be able to find
plans for this type of project? One of my first experiences

with radio was when my dad brought home an old shortwave
radio he had salvaged from someones junk pile. I can remember
sitting there listening to the time signals and just being
totally amazed. I think that a project like this might be a
fun one for my son and I to build together.

I don't think today's clock is using wwv, maybe wwvb, no speech there, I believe
it's at 100 Khz

A company "Oregon Scienfific" makes radio clocks (not clock radios) that pick
up the WWV at 60KHz and sets itself to the time. helpme@oscientific.com
Another company "Zeit" also makes such clocks. 800-985-8463

Need cash for The Holidays? Read on :)
Hi :) I'm an electronic musician seriously searching for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment (MIDI and pre-MIDI).

In general, I'm looking for working or broken instruments made in the

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and

especially ~PATCHCABLES~. The more unusual, the better.

I have a Radio Shack Digital Atomic Clock 63-970. Guess what? It's the same one that Brookstone and others sell for more money. However, it receives a signal that is below the AM broadcast band. There is no audio to listen to. I thoroughly enjoy my clock - it was well worth the investment.

The new clocks are receiving data only on 60 khz.
The WWV clock that Heath used to sell is a WWV only receiver that
scan three of WWVs frequencies, (5, 10, 15 Mhz) and chooses which ever
one is currently stronger.

This was a beautiful station accessory!

MFJ should scrap some of them garbage tuners, and friggin' keyers and
sell something like that!!!

REALTIME DX SPOTS FROM DX Summit!

Get the DX spots before everybody else! Courtesy of DX Summit, the

Undernet IRC #cqdx channel has a direct live feed of all DX spots from DX Summit. You don't have to wait 2 minutes for the web page to reload, the spots appear on the channel as soon as they arrive at DX Summit just as if you were connected to a packet cluster. WWV reports and announcements are also sent in realtime. In addition to broadcasting spots, you can also interactively send commands to request data and send spots just like on a packetcluster.

The IRC #CQDX channel is also a great resource for DXers and can provide shared information such as:

Who's on the band
Help identify pileups
Latest information from DXpeditions
DX spotting
Propagation reports
Arrange and coordinate schedules
Obtain QSL information
Track pileup listening frequencies
Coordinated band opening checks
Discuss and get help with DXing software

Please visit http://members.home.com/dab/dxchat.html for more information on the Undernet IRC #CQDX Chat Channel for DXers.

Hi,

Need a GP350 speaker/mic, prefer mic with proper plug and not a gp300 mic adapter... is there such an animal and what is the cost for a good used one... or a bad used one....and if not, the same questions for the gp300 mic adapter and mic...
EMAIL YOU REPLY PLEASE!
thanks,

What signals are available at the "antenna tuner" connector (the 4 pin longish molex plug) on the 706MKII. This is the only connector not really covered in the manual.

Reason I ask - I was wondering if might be useable in conjunction with other tuners, etc.

Pleae email me directly

Thanks

I don't know much about the molex plug connection, but I did get a tuner module that used that plug from http://www.qth.com/BetterRF/ and it works just fine for me.

And if I can quickly give a positive "plug" for the company that sells it; within 3 days of ordering it (by phone) I received it by mail (very good, I'd say for a piece of equipment sent from New Mexico to B.C., Canada...). Sure beats hell out of some companies that I've mailoredered from, whose sales reps have garanteed that the product I want is in stock, and I still wait a month for.

Conections in order:

Radio electrical ground - volts
Radio DC hot + volts
Output to activate tuner
Keys the radio

Contact Gary Fibre at Icom for details I made the Alinco tuner work
using the above and some slight tuner mods.

Hi Tom

Icom IC-706 to AH-3 Auto-Antenna Tuner, control connections:

```
                          1. TKEY: low if the tuner is not connected,
                             the <TUNE> button is not functional; high
    Rear panel view:         if the tuner is connected. On receiving
                             a TSTR signal, the tuner may assert TKEY
    1    2    3    4         low to key the transmitter.
  ____________________    2. TSTR: normally high; pulses low twice
 /                    |      when the <TUNE> button is pushed and held
<   O    O    O    O  |      for 2 seconds to start the tuner; pulses
 \____________________|      low once when the <TUNE> button is pushed
                             momentarily to stop or bypass the tuner.
                          3. +13.8V @4A: switched by <POWER> button.
                          4. 0V: chassis GND.
```

Best Wishes

Hi all.. please be aware that ALL merchandise I ordered from Roly has
arrived a little late, but AS STATED IN CONDITION STATED, People do
sometimes have difficulties and we can't plan for the unexpected, so let's
cut the guy some slack. I posted with a simple question: 'where did you go
and what happened to your contact lines?' This apparantly sparked a rash of
other postings, I assume, of a less than polite nature.... I hope it wasn't
my posting that started it and if so, I do apologize to anyone affected.
Roly, if you're out there...Thanks, and hope u resolve the problems,
whatever they were and all turns out for the good.....
73 to all,
Randy

Hi :) I'm an electronic musician seriously searching for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old effects and all related electronic musical equipment (MIDI and pre-MIDI).

In general, I'm looking for working or broken instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~. The more unusual, the better.

Hi there :) I'm an electronic musician seriously searching for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment (MIDI and pre-MIDI).

In general, I'm looking for working or broken instruments made in the

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and

especially ~PATCHCABLES~. The more unusual, the better.

Hi,

I have a NEC Versa M/75 notebook and am having trouble finding software/freeware/shareware that will acknowledge the soundcard, and being the inept one that i am, have also not had much luck by changing the irq's, etc. some software works, some doesn't. It is a built in card with windows drivers, which emulates soundblaster. I'm trying to run things like ACARS decoder, POCSAG decoder, SSTV and RTTY decoders..... am I wasting my time trying to make the "soundcard-type software" work?? Should I just order that HamComm serial port decoder and be done with it? (it do seem to have a lot more software avail.) also, anyone with input on the usefulness and operation of your hamcomm decoder, please feel free to input! Can it be used with a spectrum analyzer program?
thanks for the time and please email replies!
Randy

Desperately seeking:

4- 40uf @ 450 (or better) WVDC

or:

1- 15-20 uf @ 1600 WVDC

These caps are used in a 10m linear amp, in the doubler circuit. The size is of great concern; they must be axial; a tall electrolytic will not fit in the chassis.

There is currently 3- 40uf @ 450v in series to meet the voltage requirements. Any ideas concerning retrofit welcome.

Have tried several sources to no avail (EDI, MCM, Jayso, CTI, more). It seems that high volt caps are BA these days.

Suggestions appreciated. Please e-mail as well as post; much problems with ISP NG's lately.

TIA-

Please,

The capacitors you need, both 450 V axials and 1 kV to 15 kV oil filled cans, are available through several suppliers of parts for old tube equipment, all of whom advertise in the Antique Radio Classifieds, of which a free sample is available on request. Their ads are in Nuts and Volts and most of the other electronic hobby magazines.

Regards, DLR c/o Topper

The BTL RTTY program works well with my soundblaster compatible.

I can e-mail a copy.

I am pretty sure both Mouser and Digikey have 450 V axial and radial caps in that range of values.

You won't find 1600 V large uF values anywhere as far as I know - at least not for anything you could afford. :-)

Have tried several sources to no avail (EDI, MCM, Jayso, CTI, more). It seems that high volt caps are BA these days.

Suggestions appreciated. Please e-mail as well as post; much problems with ISP NG's lately.

TIA-

The answer is yes! The Hamcomm interface will operate many modes, including a few you did not mention - Hellschreiber (Feld-Hell), HFFAX, SSTV.

It is really easy to build a Hamcomm interface. I suggest you check http://www.accessone.com/~tmayhan/ for details.

For info on Hellschreiber, which is gaining a renewed interest the world over, check http://members.xoom.com/ZL1BPU/Contents.html

The Hamcomm softwaare includes a simple spectruim display.

73,

fred

Does any one have an idea how to increase the transmission range on those 900
Mhz Cordless Phones? I have an AT&T 900 Mhz Cordless Phone model 9100  I
opened   the inside metal box which encloses the RF TX/RX  circuitry but I'm
not getting any signal reading on my scope or meters not from the antenna and
not from anywhere inside that mental box now how could this machine transmit
almost a block and emitting such a low signal that I can't even  detect?
please any Information will be greatly appreciated tanks PS:  the one  block
range is when I place the base high on my roof
```

Three guesses:

1. A publicity stunt.
2. Isn't he the guy with all of the UFO talk? Hmmm, perhaps he discovered they aren't real?
3. Has he been kidnapped by aliens and replaced by one who scuttled his show to cover up? :-)

A year after the supposed event he now decides to leave ... does the name Ross Perot come to mind?

Someone correct me on any mis-statement of the facts here, please! :-)

Seriously, something just doesn't sound right here ... anyone get the same feeling?

During filming at the VLA, I pointed out to the Script Supervisor that W9GFO was only one character away from being an historic callsign. She listened with interest and made a note, but it did not get changed.

There is more information about early radio astronomy, Grote Reber and W9GFZ at:

Perhaps this is taken out of context, but I have to take exception to this type of thinking that I frequently encounter.

I do not beleive ham radio died. The internet can enhance enjoyment of the hobby, but cannot kill it. Perhaps packet BBSs will die some day with the availability of email, but amateur radio will survive.

For me, owning equipment is a necessary part of having a station to operate, not the other way. No offense, but NOBODY can do it "all" as far as amateur radio is concerned.

I can understand if operating on the air is no longer fun for you and there are many who just homebrew or design etc and never really get on the air, but this is distinct from the "death" of amateur radio.

I see some spending time with internet, but I think the amateur web page design hobby is a passing craze. Not that everybody shouldn't have a web page or whatever, but this like having a QSL card will soon be taken for granted - it is a means to sharing information about amateur radio, not a replacement for amateur radio, though there are no doubt web page design hobbyists. The web page is a means not the end for most hams, I think.

I don't bring all this up to just disagree, but what do others think? How does amateur radio coexist with internet? I think trying to ignore the internet is sure to fail, so what role is it to play? Surely, some will be enticed to pursue it as a hobby, much as the introduction of microcomputers 20 years ago, but in the long run, these computers became a vital part of the ham shack. I view the internet the same way.

Amateur radio as I think of it is an awful big hobby to have done everything.

73, Brian

It did for me. I still use 2m to keep track of a group of close friends
locally but gave up on the HF bands years ago (and never moved up to
General) because I wasn't strung out on collecting contacts. I wanted to
TALK to folks, exchange info and ideas, but all everybody (it seemed) else
wanted was a quick contact for a QSL. Answered a CQ from a YL living in
the city I was born in. Appended a question to the usual QTH, Rig is, etc.
but she was gone - to busy to even reply ....! Tinninitis makes code hard
for me but I perservered til I was sure I could pass the 13 wpm test - only
to find it'd been changed to suit the "QHT is, rig is then gone" crowd. I
haven't had an HF rig hooked up for close to 20 years now and have
forgotted most code. I may try again if the restructure gives me general
priviledges but .....

I can see where you're coming from on your opinion.  I've been a General for
25 years and I get very disgusted with the immaturity that goes on   40
meters, especially in the evening hours. It sounds like they are grown men,
but they are real jerks, and are ruining our hobby.  I've been using
Vocaltec's Iphone 5.0 on the web  (with video and voice) and have been
talking all over the world. The sorry thing about it is, there is an awful
lot of jerks and perverts there too.
Again this is my opinion.            73's

The internet didn't kill ham radio for me, it just makes it quicker and easier to get information related to ham radio. There's lots of things to do on HF besides rag chewing; digital modes, slow scan, etc. I enjoy tinkering and building and that's ham radio too. I've never tried I-phone but I can't imagin that talking over a pair of wires rented from the phone company, via a computer purchased in the store, using software written by someone else could be as interesting as working around the world with a QRP rig and antenna you build yourself.

I see that you are 39 years old Brian. By reading your post I would have thought you much older. Most of the hams I QSO are over 50. That should tell you something. There is not enough young people entering the hobby. One big reason IMHO is the internet. Why memorize a multiple guess test and study the code just to buy radios and yak on the air, when you can have all that and more on the internet. Further learning computer skills is valuable. I can't remember the last time I talked to a guy that had built his rig, or unless he is in the business knew how it worked. Teenagers these days are some of the best hackers. If the internet were around when I got started in 1957 do you think I would have been studying the code?? Not on your life. *Ham Radio* is not dead. The ham radio I knew in my youth is almost dead. The present day ham radio of communication ops will slowly evolve toward a CB type citizens radio. I don't think easier or no code tests will stop or enhance the trend. And I'm not sure it's bad. When I was young the government looked on ham radio as a ready pool of electronics types if needed in an emergency. That's laughable today. Today our computer savvy is what keeps our nation productive so the more young people that swing that way the better.

But what happens when there is a disaster and the phone lines are knocked out. How does computer knowledge help then? Actually, many of the computer savvy people today are software types only. They don't have a clue about the electronics inside the computer. If it quits working you take it back to the store where you bought it. Kind of like being considered an automotive expert because you know how to drive a car.

Al,

"Ham Radio as it used to be" died when....

...the Bureau of Navigation started requiring hams to have licenses
...the Navy succeeded in banishing us to 200 meters and below
...spark was outlawed
...phone came along
...Novices were created
...they gave 20 meters to the Generals
...SSB came along
...incentive licensing came along
...repeaters got popular
...Novices were given voice priveleges on 1296MHz
...No-code licenses started
...Barry Goldwater died

...whatever pseudo-tragedy you wish to blame it on......

> I have always been a ham of extremes....1961 1KW Am station, 1963 1Kw
> DSB station (1000w carrier modulated with 4KW of audio) It was the
> strongest radio signal coming from the US on any band worldwide. 1970
> 10Kw SSB on all bands......

Given that record of flouting the rules, perhaps it's a good thing
you've decided it isn't fun any more.

Hi,

Sorry to hear you gave up on HF ham radio. I have been using HF for 43 years now, and I am a ragchewer, DX or local. All on CW. There are thousands of excellent ops out there, worldwide, who enjoy ragchewing. I ragchew with stations, including DX (a lot of JA's) from my car, CW mobile, in the mornings on the way to work. Sometimes I continue a QSO with the same station on a subsequent day.

There are a LOT of different kinds of folks out there on HF. Too bad you threw in the towel so long ago. Take another look, especially on CW. Lots of ragchewing going on all the time.

I too cannot see how the Internet could ever replace ham radio for me. I have been using the Internet for over 14 years now, since long before it became commercialized. Direct person-to-person operating on HF is a completely different thing than "using the Internet". The former relies on operator skill and technical curiosity and interest, and the latter is merely another communications and information gathering tool, with none of the magic of radio. Apples and Oranges.

73,
Don, W6JL

I think you forgot:
When the ARRL started representing Kenwood, Yaesu and Icom more than they represent US hams.

When the ARRL makes policy primarily for self preservation as a money gathering business, instead of being an advocate of US ham operators.

When the ARRL started making decisions based on ad revenue instead of what's good for US ham radio.

Joe

What Al really means, is that now that he has gotten old, and taken from the hobby, and now he has nothing to return.

Rather than take all his hard earned education, and practicing skills, and being a mentor for young kids, he decided to just burp in satisfaction, and then say "they owed me, I didn't owe them."

You're a selfish bastard Al, and you must repent.

Steve

As an old ham,(47 years old, licensed ham for 32 years) I can relate to this thread. I "discovered" the internet a few years back and let ham radio fall by the wayside.   To me the fun of ham radio was the challenge of making contacts. When I got my novice license, I was limited to cw, crystal control, and it was only a 1 year license. My first rig was a converted ARC 5 xmtr and a BC348 receiver. With only one crystal for the 15 meter band it was a challenge to make a contact --with anybody.   As time went on, rigs got better and better and making contacts got easier until it got run of the mill to work whoever or wherever you wanted. Almost as easy as dialing a telephone.

Also, my main source of fun was tinkering with the equipment, building, modifying etc and the new rigs got so complicated with all the bells and whistles and so miniaturized that the average ham couldn't fix his own rig. We hams became appliance operators.   Now, my fun with computers lies with building, tinkering and upgrading, my internet surfing usually is on the hardware newsgroups.

I am currently getting back into hamming, I bought a QRP rig and am working CW almost exclusively with a simple wire antenna..part of the challenge is there but its still not like the old days.   I know very few young hams, most are old farts like me. If ham radio has a future 20 years down the road I don't know what it will be.

Another of my peeves is the cost of new gear.   Computer gear has gotten dirt cheap but ham gear just keeps going up. Just an "entry level" station will set you back a couple of grand at least.   I'm using a computer power supply to run my QRP rig...the 12 volt connection is rated at 10 amps...I paid 15 bucks for it new at the local computer shop.   A 12 volt 10amp power supply from a ham radio outlet is about $100. It would be hard to spend over $2500 for a top of the line computer but a top of the line ham transceiver, antennas and accessories easily can go for $10,000   Of course part of the difference if there are a lot more computers sold making the costs lower, but the ham equipment manufacturers aren't hurting any.

Thanks for the soap box to air my 2 cents worth...

There are many hardware experts also. Ironically, in many cases
the phones do continue working when power goes out, etc.
Being ready for an emergency doesn't require electronics
experts, it requires emergency procedures and alternatives.

> If it quits working you take it back to the
>store where you bought it.

So what, I don't bother fixing many things either.
Again, the knowledge needed in an emergency is operational and
only rarely might electronics knowledge be a needed skill.

>Kind of like being considered an automotive
>expert because you know how to drive a car.

But there are auto experts that I wouldn't ever
let drive any of my cars...even in an emergency :-)

You mean, it's too bad he didn't run unlawful power or flout other regs only while getting DXCC endorsements or busting pileups in League sponsored contests.
It was the League, after all, that first devised the "Don't ask, don't tell" policy.

The rules, of course, are different for the rest of the saps who don't need to feed their yagis with 7/8" heliax.

We certainly owe the League a deep debt of gratitude for taking a leadership role in promoting ethical operating practices, without which the bands surely would have been full of jammers, users of foul language, and other lids who learned by example.

ANy additional programming / channel infor available on this radio? I
would appreciate it. I bought one cheap and want to use it. I know it
can be programmed by the keypad, anyone know the full extent?

least.

Wow!! James, you've got expensive tastes!! After 35 years of hamming, I
recently moderated my tightwad ways and spent $2K on what I thought was a
top of the line rig. Now you break my heart and tell me I'm at entry level!

> I'm using a computer power supply to run my QRP rig...the 12 volt
connection is rated at 10
>amps...I paid 15 bucks for it new at the local computer shop

Hmmm... You say it costs $2000 to $10000 to get equipped in the ham world, but at the same time you're having fun with an inexpensive QRP setup. Make up your mind--which is it??

Personally, I'm amazed at how cheap ham stuff is, especially since it doesn't have the mass market of computers or stereo equipment.

I could get a rig that covers 160 thru 2 meters running SSB, CW (keyer built in), FM, AM, general coverage, very compact ... for about $800 used or maybe $1100 new. Try that in 1965 or 1970.

But if I were just entering ham radio, I probably wouldn't spend that much. I'd get a pretty nice rig for <$500 have plenty of fun with it. I recently sold my wonderful Corsair for $350 after 10 years of great performance so I could buy that dream rig (entry level to you).

I think it's a non-issue. nothing can be done to change it so why stress? I'm sure a lot of people felt that reading books by candle-light lost it's "character" when Edison came along. But who cares? I sure don't. My HT is still right where I put it last night...the internet didn't make it disappear. I don't love radio because it's radio, I love radio because it's the best way we know of to communicate wirelessly. If I came across some other new-fangled method of getting the job done, I'd sell my radios as fast as I could before other people find out about it - in other words, radio is a means to an end.

always waiting for a disaster to make hams useful makes us seem pretty boring
and useless.

God, I can't think of anything more boring than "collecting contacts". I have no idea why hams are generally considered boring people....Maybe that's why peope do DXpeditions, they're tired of collecting contacts so they just get up and GO somewhere (and they take their radio too).

But in many cases the phones do go out - and what good is a computer, modem, and internet then?

> Being ready for an emergency doesn't require electronics experts, it requires
> emergency procedures and alternatives.

As long as everything is working acording to plan. If you're not an electronics expert then what do you do when something goes wrong? Wait until the local Radio Shack store reopens I guess. What you need is emergency proceedures and alternative PLUS some electronics expertise.

> Again, the knowledge needed in an emergency is operational and only rarely
> might electronics knowledge be a needed skill.

and only rarely is any emergency equipment needed in the first place but that does not mean we should not concern ourselves with emergency planning. The bottom line is that the ham with an HF rig, some sort of emergency power and enough electronics savvy to put it all together and make it work will be the best prepared for emergencies. The people with only computers and cell phones will be unable to communicate with anyone. Even VHF will be very limited without the supporting repeaters.

> But there are auto experts that I wouldn't ever let drive any of my cars...even
> in an emergency :-)

But, if during an emergency your car won't start I'll bet you'd be glad to have him around :-)

By the way, the discussion on this thread takes place on a regular basis in a government agency I work with. The higher-ups are always wondering why, when we have cell phones and a computer network, do we need to be spending money on a radio system - especially an "antiquated" HF radio system. Funny thing - nearly every time a hurricane hits they all all communicating via HF radio because its the only thing that still works. Another funny thing - they always need that electronics technician to string an antenna somewhere, decide which frequency to use, and get everything up and running for them.

I recently purchased the ARRL Travel Planner software, which allows the user to create a list of repeaters for a specific area or route. This software then allows you to export the file, in what it calls a .tpe format.

I also have the Yaesu ADMS-1 programming software for my FT-50R, which stores it's files in what it calls the .rdf format. What I found is that the Yaesu software is not able to recognize or use the files created by the ARRL software, which is something I would like to be able to do.

Does anyone know of a utility that would translate a .tpe file to the .rdf format, or know of a work-around for this problem.

TIA for your help.

I think the internet is like a
huge library, not a means to
the end. It is a tool just
like that rig you fire up at
night. We listen, learn, and
do just as our forefathers
have done throughout the ages.
Nothing is dead until we are.
Life is a journey and we all
want to learn until were gone.

No... $2000.00 is "entry level" when compared to a brand-new /\/\otorola
MICOM-2R ruggedized, milspec HF set with ALE
(Automatic Link Establishment), at $6500.00+ :-)

But then again, the MICOM-2R is fully type accepted for commercial use
and doesn't have to be "modified for out of band operation" ...

1.6-30 MHz in 10Hz steps, fully tunable for frequency from the
front-panel
Full DSP on transmit and receive, four selectable filters for both
transmit
and receive 2.4 KHz, 3.0 KHz, 500 Hz CW filter centered on 900 Hz, and
a 500 Hz low-speed data filter centered on 1800 Hz, digital
noise-blanker,
and digital syllabic squelch. The set is fully ARQ capable with a
dedicated
remote connector for a TNC..

Top of the line ham gear like the ICOM's with spectrum display can
also run about the same amount... $6000.00+

Trish

After reading the postings here on the "Internet vs Ham radio", I am wondering why this issue is defined as "either/or". Ham radio and the Internet are different animals and they both have their place.

I think that viewing communications as a tool kit of various methods is better than getting into heated discussions as to whether "The Internet is 'better' than ham radio" or vice-versa..

For example, I was part of a FEMA sponsored emergency exercise here in the Silicon Valley area a few weeks ago and our San Jose RACES unit was a major component of this exercise. Our operators (including myself) were tasked with the job of shadowing the exercise evaluators and observers and providing a comms network so they could all communicate with one another.

Just because I was "RACES", did not prevent me from handing out City-issue handie-talkies that are on our City Channels, nor did it prevent me from using either my City-issue Cellphone or my own cellphone in order to get messages through to others.

Just like in "The Real Thing", you use all communications means at hand and not limit yourself just to ham radio. In fact, our State Office of Emergency Services considers "ham radio" as part of a larger-scope context called the "Auxiliary Radio

Service" (ACS), and pools all of the resources of many types
of services together. They all have their place whether it is
ham radio, Internet, National Guard, State Military Reserve,
Red Cross, Civil Air Patrol, ARES, RACES, MARS. Caltrans, or other
services..

FWIW, just my $.02...

It's only a matter of "Thinking outside the box" :-)

So was it a Perot-like decision-undecision, or just a cheap publicity

stunt?
He had a whole year before he decided to do it, according to his quiting statement,
so there is no reason to believe that he didn't have all of the information he needed to make that decision. So much for whatever credibility he had with whoever!

Hmmm ... just when you thought it was safe to listen to the radio ... he's baaack ...

$15.00? Maxon offers no support for these radios, they are the absolute most difficult radio to program, Bearcom was the only company stupid enough to sell them.

But, the battery is good. $15.00, and I pay shipping.

I would find it quite difficult to talk on the internet with the four or five other people I talk to on a regular basis going to and from work. I would have found it VERY diffcult calling on the internet to be evacuated from my flooded home March 1 of last year when my phone did not work. I would also have found it quite difficult calling the police over the internet to a motor vehicle accident I was involved in.

Your arguments against ham radio can be offset by many other people's arguments for. It is a moot point - each has a viable place in our society. If you wish to spend your time on the internet, please do so. I enjoy each in it's own time!

This all rings very true to me, except for the bit about the 31 foot
paraboloid. I attended a presentation some years ago at the National Radio
Astronomical Observatory, where they showed pictures and video of a
reconstruction of the original antenna. As I recall, it was called
something like a "Z Curtain", and was a rectangular zig-zag affair. The
vertical parts of the zig-zag were the radiating phased array elements, and
the horizontal parts performed the phasing function. He had it set up on a
circular track so that the whole thing could be rotated.

Am I confusing Grote Reber's antenna with something that came later (or
earlier)?

Does anyone have a copy of a .tpl & .rdf file from a radio with the freebander mod? I have found out that if you use a tpl & rdf file on your radio without preforming the hardware freebander mod and just use the tpl & rdf file on your radio you will get the same results. If you have them send them or email me at Kurgan@mail.datatoe.com

Thanx allot jimmy

P.S. I'm am also looking for the Euro tpl & rdf file

Kinda funny, I think he had just announced that his show had been bought
out by a new broadcast Co. Sounds like he got fired to me. Just a guess
though. Or the three piece suiters irked him for some reason and he
quit. You can be sure the biz end had a great deal to do with it. MK

I listened to him all the time. Pretty entertaining some of it. But I
like the stories about ghosts,ufo's,funky looking gorrila monsters,etc.
that no one else will talk about.
His show didn't get to be as popular as it is for nothing. Also
considering it's on when most normal people are asleep. I listen to him
on a 440 broadcast link to KTRH radio on my HT. Will get kinda boring at
night without all his weird types to listen to. MK

Sounds like you work the paper chasers. Not many of the people I talk to
act that way.
You need to find real people to talk to and forget the paperchasers. MK

Clear , precise and to the point. Right on! Ham radio is what you make
it. I've never had any trouble talking to any types I've wanted to. MK

Of course it's not dying. I hear just as many or more people on the
bands as I ever did. Ever try to find a clear spot on 75m for a 1 on 1
qso? Not too easy. No room hardly. Dead? not hardly. Same can be said
for 20m and others. Listen to ten meters when it gets opened up. Dead?
not hardly. VHF/UHF dead? not hardly... Whoever says ham radio is dying
needs a new stethoscope. MK

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's   Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders   Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

-Roland TR-808 Drum Machine
-Roland Compu-Rhythm

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

-Pearl SY-1 Syncussion

-E-mu SP-1200 Sampler Drum Machine

-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-Roland System 100m

Also looking for old literature on synths: magazines, brochures, books, etc.

If you have any of the above OR SIMILAR for sale or know someone who might,
please email me at rolandman1@aol.com

and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

On 11 Oct 1998 22:20:06 GMT, an orbiting mind control laser caused ddgsk@tic.net to write:

>As the resident NY'er here, (at least who posts--there are probably
>thousands lurking) my story should get interesting.
>
>In any case, we should probably set aside some common place to meet,
>perhaps a physical location, perhaps a ham radio frequency, who knows. We
>can't just let csy-2k die.

Been done already, check DejaNews.

In any event, I'll repeat it:

The Y2K Rollover Net will commence on 31 Dec 1999 at 2000Z. Primary Net Frequency is 28.350MHz USB +/- QRM. Primary NCS is N4ZHG, alternate NCS is AH6GI/4. Secondary nets will be established as needed, and may turn into a full blown ARES/RACES operation.

One hopes not.

If it weren't for the fact that such is not legal, I'd suggest calling the net by playing a certain track by R.E.M. (wonder if I can apply for a one-time variance from the FCC? It'd probably go over like a fart in church...)

For those who aren't ham radio aware, the frequency is in the middle of the Novice 10 meter allocation. By the time rollover hits, we should be getting some good skip on that band.

Unfortunately, that pre-emption doesn't apply to amateur radio antennas.
The ARRL asked the FCC to extend the pre-emption to those, but the
FCC declined. Hope that the association's attorney doesn't discover
that.

Hi there :)
I'm an electronic musician seriously searching for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment (MIDI and pre-MIDI).

In general, I'm looking for working or non-working instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~:

The more unusual, the better.

It's a moot point once the pre-emption issue is raised.

Any competent attorney will check it out, as we found out in the _Hotz v Rich_ case about 5 years ago, where the Appellate Court research attorney actually READ PRB-1 and found out that it didn't apply to CC&Rs, so the ham (Jimmy Rich) lost and had to take his 75 foot tower down.

Folks,

I have a SUN IPX workstation which I want to connect to a TNC. However, I have not been able to find patches to support AX25 KISS ... but I'm sure I've seen them out there somewhere. I have tried search engines but had no luck.

Can anyone give any pointers to either a binary (SUNOS 4.1.1) or code? If you do know, can you drop me an email as I don't get a chance to read here often.

Many Thanks

I can't address the issues you raise in your reply.  However, in my case
the current restriction is "No visible radio or television antenna shall be
permitted without the written approvalof the Architectural Control
Committee."

This restriction is clearly in conflict with Federal Law.  If requested,
the FCC would preempt the restriction.  Once preempted, would this
not open up the can of worms in regards to all antennas?

That restriction is not as bad as you would think, because it
opens the door to some horetrading versus a restriction that is
an outright ban on all antennas with no approval/waiver provision.

>This restriction is clearly in conflict with Federal Law.

It is not in conflict unless the approval is de-facto withheld
by unreasonable regulations or time delays.

>If requested, the FCC would preempt the restriction.

The key word is UNREASONABLE. Preemption would not be forthcoming otherwise.

>Once preempted, would this
>not open up the can of worms in regards to all antennas?

Not at all. Step back a minute and see what the pre-emption Order covers:

Point A - Antennas used to receive radio/TV/satellite video services

The discussion in the preemption Order was very specific that it did not cover antennas which are used for any other purpose, and in fact there was a discussion of whether antennas used for a back-channel in a two-way delicery scheme were covered (they are if the transmission function is limited to control of program delivery).

Point B - Installed on property owned or under the exclusive control of the user.

This, too, was covered in the discussion. The Order did not apply to antennas installed on "common use" property or on rental property.

Part of my law practice is consulting with and preparing standards/regulations for several local condo and townhouse associations who see the handwriting on the wall and are willing to set up reasonable regulations - including written permission from the Association - for radio/TV/satellite video receiving antennas installed on common-use property such as balconies, outside walls, and roof areas.

It would temporarily, unless the FCC gave them time to rewrite during which there would be a moratorium on new antennas of any sort, they got a court order declaring a moratorium on antennas of any sort for a limited time, or they created a fall-back policy if their blanket bad was declared void by any judicial or regulatory agency.

One might hope that they are not this creative ... BTW: I missed the first part of this ... I was wondering, did you knowingly move into a place with these bizarre restrictions, or were they imposed after you arrived?   73,

I am using a Cushcraft 3-element tribander and have suddenly developed a problem with garbbled transmissions. I get good signal reports with my vertical antenna and I get good signal strength reports on the beam but the voice can not be understood. The only change I have made in my shack is

that I have moved my computer closer to my rig and feed lines. Could
this be the problem?
I would appreciate any help on this. Thanks a lot

4Sale "Glen Martin Roof Tower, Thrust Bearing & Heavy Duty!"
Aluminum Mast Price & Specs New from Glen Martin are below:
#1; New Glen Martin Roof Tower, Specs & Price...
Model: RT-424, Height: 4.5', Shelf to top: 34.75, Base width 24�,
Max Ant. in sq ft @ 87mph@6 / 100mph @4.5 / 112mph @3.6,
Max Ant load: 100lbs   Weight: 18lbs   Price: $162.00+ Shipping
#2; New Glen Martin Heavy Duty Thrust Bearing, Specs & Price...
Thrust Bearing for rotating setups, premium quality, weatherized
twin bearing for 1.3 to 2.6 mast diameters. TB-25 Price: $89.95
#3; Glen Martin Heavy Duty Aluminum Mast, Specs & Price...
MA-2069 106" X 2.375" OD ,.145 wall aluminum hvy duty 12 lbs
$108.00 New Price for all $359.95 + Shipping and Un-Assembled.
Everything is like new and completely assembled. Asking $240/obo.
Must Pickup. Qth Burlington, NJ. I'm about 10 miles S. of Trenton
& 6 miles N.E. Of Phila, Pa.. Email or Call 609-386-9382 Or
if busy Call: 609-386-3272 {afternoon's only please!!}

You might want to look into SPARC Linux, I think it offers AX.25 support
and is available from Red Hat web site for free...

About the only way an antenna can cause garbled transmissions is
if it is causing RF feedback into the rig's audio stages. I don't see
how moving the computer could give you "hot shack" problems,
but you may have created a ground loop somehow when you wired
```

things up. If you aren't using a balun at the antenna, then a change in the effective path length to ground for the common mode currents could cause you hot shack problems. (If you're using a balun, you shouldn't have common mode currents.)

Sounds like rf in the coax to me, try another ground off the radio at 1/4 wave length.
Good luck

One possibility to consider is arcing of the traps, the matching network, or possibly the elements to the boom or mast (if they are insulated).

I have a shunt-fed tower, and had a problem with the matching capacitor arcing-over at high power. This solicited reports of distorted audio when running higher power. I opened the weather-proof box, and my XYL could see the cap arcing. Replacing the capacitor with a vacuum variable (which has much higher breakdown voltage) completely cured that problem.

Different tribanders are constructed differently, some insulate the elements from the boom and mast, others don't. Also, check the traps for evidence of arcing internally. Have had this problem on one commercial multi-band yagi. Ended up wrapping teflon sheeting around the coil to eliminate the breakdown path.

I don't know about video but I have a intercom system here at my house that plugs
into an electrical outlet and uses the home's wiring to transmit audio. I seems to
me that home wiring would be too 'noisy' to use for video, but that's just my
thought, not the gospel. Good luck!

It's simply a matter of "multiplexing": using high-pass filters to keep
the 60 Hz AC and first few harmonics (noise) out of the higher-frequency
voice circuits.   73s

Spiders like to get into the weep holes in traps and spin webs, which then accumulated moisture, from humitity in the air if no other source.Then when you turn up the wick, a very nice internal arc within a trap can occur, which can severly damage or destroy it. Pretty well causes a rebuild to be necessary.

I've got a vox enabled GP300 connected with a earphone mic unit, I set
the mic sens. to max with the RSS, but still need to shout to the mic to
make it work, is there anyway to further increase the mic gain ?

Please reply direct email.

Rdgs,

Joe

A few years ago, I saw an add in a ham radio magazine about a controller for the Ramsey FT transceiver kits. This controller gave full tuning of the entire band, 20 plus memory channels, encode and decode, etc.. I believe the name of the company that manufactures it is something like MicroTek.

Can anyone confirm the name of the company and supply a phone number or address?

Thanks

Tate, N3BXZ

To authorize the enforcement by State and local governments of certain Federal Communications Commission regulations regarding use of citizens band radio equipment.
(Introduced in the Senate)

S 608 IS

105th CONGRESS

1st Session

S. 608

To authorize the enforcement by State and local governments of certain Federal Communications Commission regulations regarding use of citizens band radio equipment.

IN THE SENATE OF THE UNITED STATES

April 17, 1997

Mr. FEINGOLD introduced the following bill; which was read twice and referred to the Committee on Commerce, Science, and Transportation

A BILL

To authorize the enforcement by State and local governments of certain Federal Communications Commission regulations regarding use of citizens band radio equipment.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. ENFORCEMENT OF REGULATIONS REGARDING CITIZENS BAND RADIO EQUIPMENT.

Section 302 of the Communications Act of 1934 (47 U.S.C. 302) is amended by adding at the end the following:

`(f)(1) Except as provided in paragraph (2), a State or local government may enforce the following regulations of the Commission under this section:

`(A) A regulation that prohibits a use of citizens band radio equipment not authorized by the Commission.

`(B) A regulation that prohibits the unauthorized operation of citizens band radio equipment on a frequency between 24 MHz and 35 MHz.

`(2) Possession of a station license issued by the Commission pursuant to section 301 in any radio service for the operation at issue shall preclude action by a State or local government under this subsection.

`(3) The Commission shall provide technical guidance to State and local governments regarding the detection and determination of violations of the regulations specified in paragraph (1).

`(4)(A) In addition to any other remedy authorized by law, a person affected by the decision of a State or local government enforcing a regulation under paragraph (1) may submit to the Commission an appeal of the decision on the grounds that the State or local government, as the case may be, acted outside the authority provided in this subsection.

`(B) A person shall submit an appeal on a decision of a State or local government to the Commission under this paragraph, if at all, not later than 30 days after the date on which the decision by the State or local government becomes final.

`(C) The Commission shall make a determination on an appeal submitted under subparagraph (B) not later than 180 days after its submittal.

`(D) If the Commission determines under subparagraph (C) that a State or local government has acted outside its authority in enforcing a regulation, the Commission shall reverse the decision enforcing the regulation.

`(5) The enforcement of a regulation by a State or local government under paragraph (1) in a particular case shall not preclude the Commission from enforcing the regulation in that case concurrently.

`(6) Nothing in this subsection shall be construed to diminish or otherwise affect the jurisdiction of the Commission under this section over devices capable of interfering with radio communications.'.

CALIFORNIA CODES: PENAL CODE SECTION 653t

653t. (a) A person commits a public offense if the person knowingly and maliciously interrupts, disrupts, impedes, or otherwise interferes with the transmission of a communication over an amateur or a citizen's band radio frequency, the purpose of which communication is to inform or inquire about an emergency.

(b) For purposes of this section, "emergency" means a condition or circumstance in which an individual is or is reasonably believed by the person transmitting the communication to be in imminent danger of serious bodily injury, in which property is or is reasonably believed by the person transmitting the communication to be in imminent danger of extensive damage or destruction, or in which that injury or destruction has occurred and the person transmitting is attempting to summon assistance.

(c) A violation of subdivision (a) is a misdemeanor punishable by a fine not to exceed one thousand dollars ($1,000), by imprisonment in a county jail not to exceed six months, or by both, unless, as a result of the commission of the offense, serious bodily injury or property loss in excess of ten thousand dollars ($10,000) occurs, in which event the offense is a felony.

(d) Any person who knowingly and maliciously interrupts, disrupts, impedes, or otherwise interferes with the transmission of an emergency communication over a police radio frequency, when the offense results in serious bodily injury or property loss in excess of ten thousand dollars (10,000), is guilty of a felony.

Aaron-
   This Bill seems a little peculiar to me. Firstly, per 47 USC 152(b)(1), the
FCC has no intrastate jurisdiction. So, to have them meddling in matters that
are intratstate in nature is dangerous. Secondly, due to the nature of the 27
Mhz part of the spectrum, it is subject to skip at both day and night times.
Therefore, the FCC may have concurrent jurisdiction anyway. This bill is the
proverbial "foot in the door". In my opinion, the FCC should concentrate upon
that which it has on its plate and stay out of the internal affairs o fthe 50
states.

Maybe a missed a point here, but isn't radio communication possible across state lines, and therefore inherently regulated at the federal level? So the FCC has authority to regulate, right? The bill, if passed, would authorize local jurisdictions to enforce existing federal laws which address such issues and out of band operation and excessive power usage.

There is no such thing as consensus about anything
having to do with hardware in Ham radio! :-)
Mono-band or multi-band?
Which bands?
The mono-band Gladiators are very highly spoken of.
I've run a Butternut and a Cushcraft (R-7), both worked well for me.
What sort of environment would it be used in?
73, DavidC AA1FA

Well, nobody wanted the PBX telephone network thing.. so I dismantled it!
Now I have a million cards with ic's, cpu's, led's and dandy little
switches! the big thing is a nice self-contained power supply which I tested
at 52volts DC! I'm hoping it is an amp monster, too...
It is an Executone Enterprise PBX, removed power supply is about waist high,
all heatsink inside, 60lbs, 3blade fuses everywhere... and caps the size of
a pepsi can. has 'alarm' led for what I assume to be a fault protect,
117vac with sticker on back saying series 2 and ps-a?? vom says 52vdc at the
terminals.
Question: anybody know about this thing and how to turn it
down/convert/resist/whatever to 13.8? how to test amperage output without
blowing something up? Hams dream supply or welder? help!!
thanks!
Randy

Hi all,

I am looking for plug-in crystal elements (CEs I think they're called) for Motorola MX340 and MX350 UHF radios. These elements were pulled from the radios I have.

Anyone able to help?

Yes, Try International Crystal Co:

International Crystal Co.
701 W. Sheridan
P.O. Box 26330
Oklahoma City, Ok 73126

Tel: 1-800-426-9825
FAX: 1-800-322-9426

ICM may have moved, but the info
above is what I have...try it..

They should have a cross reference from the
motorola part numbers for the crystals..
You can also give them the model number
of the the radio itself and they can
cross reference the info from there..

i.e. -> H34FFN3100A or whatever your nameplate
says on the back cover...

Well Randy, Without actually looking at the supply, I would guess that it is probably good for about 25amps. A lot of the older phone supplies were used to keep a battery string charged as well as run the PBX. On most of the Executone gear, the 48VDC was used on the battery string, and 24VDC (or similar voltage) was used to supply 'talk battery' to the line circuits. If you have been planning to build a solid state linear, this supply (48VDC) may be the 'cat's meow'. I will dig around and see if I have any paper work left on those Executone beasts. 73 de VE6INM

I have seen film "Contact" based upon the novel by Carl Sagan. in
start of film main character radioastronomer Ellie Arroway as girl is
using a transceiver y calling with callsign "W9GFO" well now I know
callsign of Grote Reber the first radioastronomer was W9GFZ. There is

any relation between the callsign W9GFO of film and W9GFZ in honor of
Grote Reber or is only mere causality?

We do tht here on campus every hour. We have a big motor-generator set where the main power transformer and switchgear is. It revs up a few minutes before the hour, and then injects a high pitched signal into the AC which propagates all over our campus 4KV system and thru the power transformers. This sets the Simplex time clocks to the correct time. After the injection, it takes more than ten minutes for the M-G to rev down and stop. Whew! That must be real roller bearings!

Many years ago I sent morse code over the 60 Hz power system. I connected the 8 ohm output of an audio amplifier (3 watts) yhrough a two micropfarad capacitor to the line. At the amplifier input I had a keyed audio oscillator.

I knew a radio ham several houses away and was able to hear this signal there with just 2000 ohm earphones connected to the line through a very small capacitor.

The latest Radio Shack catalog has something that sends signals over the power line. It is used to remotely turn on or off a lamp or appliance. Sender is $19.99. Receiver is $27.99.

Carrier current transmission is what its called. It is fairly commonplace. Modulation can be most anything you can send though the air. Electronics hobby mags have had many a circuit to do this. You could for example "transmit" on the power lines and any radio plugged in (or placed near enough) can recieve it.

Manuel,

The call in the movie originally *was* to be W9GFZ, in honor of Grote, but got changed to W9GFO somehwere in scripting.

I have found that Grote is still alive, living in Tasmania, but I don't think he is active in amateur radio any longer. Perhaps some of our VK7 friends would know for sure?

Grote Reber is a man, a radio amateur who in the 1930's invented radioastronomy in his back yard in Illinois.

The callsign used in the movie is a "mini-tribute" to him, but the female character played by Ms. Foster is not based on him.

He built the world's first radio telescope (a 31 foot tiltable paraboloid) in his backyard in Wheaton, Illinois in 1937.

From 1947 to 1951, Reber was employed at the National Bureau of Standards, but beginning 1951, he became self-employed with his research in Hawaii and Tasmania, Australia being supported by the Research Corporation. His interests included mapping of the background radiation at 1-2 MHz, Cosmic Ray studies, dating of Aboriginal sites, and botanical studies.

He received an honorary Sc.D. degree from Ohio State University in 1962, the Bruce Medal of the Astronomical Society of the Pacific in 1962, and the Jackson-Gwilt Medal of the Royal Astronomical Society in 1983.

Does anyone in this group have a battery holder for the Motorola MX320/MX350 he/she want to dispose of?
Even empty holders will be okay as I can fit the internal NiCd batteries myself.

Grote Reber is still around and lives in Bothwell which is about 20 minutes
drive from where I live in Hobart.  Some of my friends are radio amateurs and
have had no contact with him as far as I know.

     An interesting note is that I explain how to do the complete freeband mod
without even having to use someone else's rdf and tpl files. I concider it much
cleaner cause lord knows what settings others set their radios to and you'll have
/their/ defaults.
     You can find the faq at http://www.blarg.net/~tdragon/faqs/ If anyone has any
questions or problems, feel free to ask me for help.
     BTW, this /will not/ work on the newest ft-50s. They've had the freeband mode
completely removed and if you try to set the radio to freeband mode, it'll act
strangely and erratically til you restore it to a valid country code.

Your description seems to refer to Karl Jansky's antenna from 1932 in
Holmdel, New Jersey. See any history of radio astronomy for details.

Answer: None of the above. Art Bell was forced off his radio show by PMS. The full story is at http://thevinegar.webjump.com/home.htm.

Also at that site are results of an experiment which shows that being educated in Morse Code can kill you.

Looking for a good Ham III or HAM IV rotor and controller. Will consider a tailtwister or other comparable rotor as well. If you have one you'd like to sell, please email me at n1ao@maine.rr.com with the details.

Thanks.

That's really not fair.

Most hams are not lazy; they simply don't have the technical knowledge to comprehend digital networking, much less "improve" it. This doesn't make them "bad" or "lazy." Technology is simply changing far too quickly for the average hobbiest to keep pace and it's unreasonable to expect them to do so. I barely have time to say "wow" before some new wonder comes down the pike, making the last one obsolete.

The FCC tried in 1974 to open the ham bands for true exploration and experimentation by adopting a bandwidth-based, rather then mode-based, frequency allocation. Any emmission would have been "kosher" as long as it met the standard. The ARRL, short-sighted as always, talked them out of it. Darn pity. We might actually have been able to do something "new" and useful by now. No... we can't compete with the young turks in multi-million dollar labs and big funding. A few of us, like perhaps you, can hope to make some progress in our limited fields of expertese. Don't damn everyone else for being different from you.

Hello,

I am in search of some li-ion cells to rebuild the battery paks in my old Texas Instruments notebook computer. They are Sony US18650B size A. Can anyone recommend a place to get these cells from? I searched for over an hour on the internet with no luck. Many thanks to anyone who can help.

Mark

Hmmm, unless your going for an exact OEM replacement of the identical
```

type of cells, I wouldn't recommend you attempt to swap in dissimilar type lithium ion cells. The electrical characteristics (cell capacity, discharge curves, etc), are very precisely matched to the charging circuit at the time of manufacture. Most packs contain an onboard embedded processor to monitor the charging process. This might allow you to replace the cells with a non matching type, given the window of adjustment the circuitry will permit.... however, and this is a big however, if it doesn't like the type of load it sees, or encounters an unexpected type of characteristic, there's no telling what will happen. Li-Ion cells are very volatile devices. Used properly, they are a superb power source, but abused they can cause serious safety issues. Pick up an issue of "Portable Design", or Battery Engineering for more substantial info and a list of OEM suppliers.

You have Reber's antenna confused with Karl Jansky's antenna. NRAO in Greenbank has a reproduction of Jansky's antenna on the lawn near the visitors lodging. They have the ACTUAL (not a reproduction) Grote Reber paraboloid on the opposite side of the main entrance, south of the laboratory building.

The original plan for "Contact" was to use Grote's callsign W9GFZ, the movie producers changed it to W9GFO, probably thought it sounded better. The call actually belongs to a ham in Indiana, who was not consulted prior to its use. Best part about the movie was the blind character, Kent Clark, who is based on a real life astronomer, Dr Kent Cullers. Worst part of "Contact" was that they changed the ending that was in the book. If you saw the movie but didn't read the book, do so right away!

Hi contest folks.

I am German and work for a few years in the US. I like contesting, especially the big ones and prefer CW. I used to work with a few friends in the multi single categories.

I am looking for contacts to contest groups in the Puget Sound area (Seattle, Bellevue).

Please email me.

Andreas

What don't quite ring true is the fear that someone may find the
equipment while the guy is not there.

The equipment can be left powered on despite "someone nosing around", as
nobody touches things that they don't know about, not even managers*.
Certainly not expensive looking equipment. Sheesh, someone might get
awkward about nicking things, using a spare dish to do some hobby like
Seti is not going to feature on the

(* this is not strictly true, maybe it should read "a second time")

I want to buy a used solid-state HF XCVR transmitting at least SSB and CW
including at least 10m, 15m, and 20m for $300-350(price includes fedex or ups
s&h). Also, I want the price to include a power supply, VFO, or anything else
extra required(except balun, coax, and wire for dipole antennae). If the

power supply is an external 12v/13.8v power supply not built in with more
than 3A Continuous and 4A Surge, I'll throw the power supply above for free.
If you can include more HF bands/6m band in the radio for the price given,
that would be greatly appreciated.

However, since I am only 14, I would have to ask for either a month free trial
before I buy it or my money back/repairs within 2-4 wks.

I need to know what the fix is for allowing Adams-1d (version.24) to enter any freq...? If I enter a freq.. outside the FT-51R's band plan it tells me to enter a valid receive freq... I use to know how to do this, I thought I had to add a line to the yaesu.ini file.

Joe,

Like I said... you can read it on the SETI web page...looks an awful lot like a real live jerk to me....why else would he not give his name? or post through dejanews? Trust me...if they really did find something they wouldn't try to hide it!

Regards,

Ed

Uh... excuse me? SETI? The stunted underfunded orphan of radio astronomy? The whole purpose of which is to find signals from other civilizations? If they found something, they'd be bellowing it at the top of their lungs...

R.D. Elliott

This guy also posted this story on the "alt fan Art Bell" news group, kind a makes you wonder.

Good point, if this is a joke its not funny.You can joke all you like about
Clinton but not important stuff like this.Lets make it a rule of honor.Now
anyone got a cigar?

> had to add a line to the yaesu.ini file.

With my ft-50, I added teh line to my win.ini file (where my adms software stores it's settings) AllowAnyFrequency=1. Here's what I have in my win.ini file:

```
[FT-50 Programmer]
DataDir=C:\YAESU\FT-50
AllowAnyFrequency=1
Calibrate=7636
Com=2
TemplateFile=C:\YAESU\FT-50\TEMPLATE.TPL
UseTemplate=1
```

Yes, it's not the ft-51, but hopefully it'll help.

However, even with it switched from a 0 to a 1, I haven;'t noticed any difference, I still can't program cell, below 76mhz, or 200-299.995 mhz. I'm pretty
sure this didn't do anything. :(I wonder what this setting does, or if there's a setting to let you truly enter in any frequency.

```

This is amazing to me. My only point was that not doubting the government concerning SETI discoveries was naive. Now I'm a conspiracy nut? You can't even *imagine* why the government my not want to divulge the verification of such a discovery immediately? And instead, what do you offer -
Argument? Reasoned Discourse? Speculation?

No. You offer a bumper sticker. And what does your bumper sticker mock?
Questioning Authority.

Go back to work, droid.

What makes you think that there is any connection between the government and SETI? Come over here to Sunnyvale and we will show you where SETI is. All donations cheerfully accepted. Not funded by US Government. You may not be a conspiracy nut, but you could play one on TV.

Looks like a fake to me.... Apparently the doppler effect is wrong as well
as a few other things. Seems that if anyone questioned the findings, they
were corrected with a new DSP pix...  SETI seems to be ignoring it and I
think I will too...

Absolutely. For the benefit of slow readers, the operative word there is "underfunded". Guess what would happen if they found a real signal.

I don't doubt that a government *could* wish to coverup an event of this magnitude, but the fact that they've pulled funding and let it sink or swim in the public domain means that they have no intention to do so. You control things that you might want to coverup, and make them appear to be public so that nobody else attempts to do the search instead.

I have updated my page on this subject at:
http://www.geocities.com/CapeCanaveral/Hall/7193

New items:
1. The Identity of the Unkown Engineer revealed!

2. BBC reports on the events so far.

3. Strange goings on at the SETI Project BETA!

4. More Debate and Speculation on just what was picked up by SETI.
